# Medical Product Quality Report – COVID-19 Issues

Issue 11. Data from April & May 2021

The document has been produced by the Medicine Quality Research Group, Centre of Tropical Medicine & Global Health, Nuffield Department of Medicine, University of Oxford

This report was prepared by Kerlijn Van Assche, Céline Caillet and Paul Newton of the Medicine Quality Research Group, that is part of the Infectious Diseases Data Observatory (IDDO) and the MORU Tropical Health Network, Centre for Tropical Medicine & Global Health, Nuffield Department of Medicine, University of Oxford, UK. We especially thank Hoda Kanso, for working together with the team in writing this report.

The Globe system was developed by Clark Freifeld (HealthMap, Boston Children's Hospital, North Eastern University) and Andrew Payne (IDDO), Alberto Olliaro (IDDO) and Gareth Blower (ex-IDDO) with curation of the English reports by Kitignavong Inthaphavanh and Konnie Bellingham, linked to the Lao-Oxford-Mahosot Hospital-Wellcome Trust Research Unit (LOMWRU), Microbiology Laboratory, Mahosot Hospital, Vientiane, Lao PDR.

This document is open access but we would be grateful if you could cite it as:

# 1 Summary of findings

In this April-May 2021 issue, we report on 135 new public domain incidents on diverted or substandard or falsified (SF) COVID-19 products identified on the Medicines Quality Monitoring (MQM) Globe. For the months of April and May, the MQM Globe reported incidents in India more than any other country; India was experiencing its second wave and the demand for COVID-19 supplies drastically exceeded the supply.

The category of COVID-19 medicines had the highest number of incidents of diversion, substandard or falsification issues. The medicines which were most reported were remdesivir, amphotericin B, and tocilizumab. 88.3% of the incidents relating to COVID-19 medicines were reported for remdesivir. Healthcare professionals have been the backbone for combating the pandemic, caring for patients in very difficult circumstances at the front line. Sadly, a few of them have been involved in diversion or falsification of COVID-19 medicines.

This report also highlights a surge of diversion and falsification of ventilation and oxygenation equipment and consumables, particularly in the month of May. Diverted and SF COVID-19 vaccines were also reported in these months. The MQM Globe holds 24 articles from April and May reporting diverted and SF vaccines in eight countries and online. The reported incidents relating to other COVID-19 medical products such as personal protective equipment, sanitisers & disinfectants and diagnostics seems to have reduced.

We remain very concerned about the global risk of SF COVID-19 medical products, especially vaccines and medicines. We continue to share data from the MQM Globe (Figure 1), that can serve as early warning system for potential SF quality issues.

Figure 1. Reports on the Medicine Quality Monitoring Globe linked to covid-19.

# 2 Introduction

During the COVID-19 pandemic, the demand for COVID-19 related medical supplies has inevitably ballooned with an increased need for personal protective equipment (PPE), diagnostics and preventive & curative pharmaceuticals. The high demand and related shortages of genuine products contributes to an increased global risk of diverted and substandard and falsified (SF) medical products, for COVID-19 and for many other essential medicines. The media have been reporting diverse examples of SF products flooding the market.

This report aims to collate information and reports in the public domain on the quality of medical products that are currently in use, or that are being trialled for COVID-19's prevention or treatment. We also include reports on key subjects such as access, affordability or off label use for COVID-19 if they mention concern of the quality of the products. We do not aim to include discussion of the multiple fraudulent claims and quackery.

We use the terminology for different types of poor quality medical products as defined by the World Health Organisation (WHO, 2017)<sup>1</sup>:

# Substandard medical products

Also called "out of specification", these are authorized medical products that fail to meet either their quality standards or their specifications, or both.

# Unregistered/unlicensed medical products

Medical products that have not undergone evaluation and/or approval by the national or regional regulatory authority for the market in which they are marketed/distributed or used, subject to permitted conditions under national or regional regulation and legislation.

#### Falsified medical products

Medical products that deliberately/fraudulently misrepresent their identity, composition or source.

We emphasise the difference between the use of the terms 'falsified' and 'counterfeit' medical products. 'Falsified' is a broad term including all the various types of deliberate misrepresentation of a medical product from a public health perspective. The term 'counterfeit' is specifically linked to intellectual property rights, 'trademark counterfeit goods' and 'pirated copyright goods' as used in the Trade-Related

<sup>&</sup>lt;sup>1</sup>Source: World Health Organisation. Appendix 3 WHO MEMBER STATE MECHANISM ON SUBSTANDARD/SPURIOUS/FALSELY-LABELLED/FALSIFIED/COUNTERFEIT (SSFFC) MEDICAL PRODUCTS WORKING DEFINITIONS. In: Seventieth World Health Assembly.; 2017. Accessed March 2, 2021. https://www.who.int/medicines/regulation/ssffc/A70\_23-en1.pdf?ua=1

<sup>&</sup>lt;sup>2</sup>Trademark counterfeit goods: any goods, including packaging, bearing without authorization a trademark which is identical to the trademark validly registered in respect of such goods, or which cannot be distinguished in its essential aspects from such a trademark, and which thereby infringes the rights of the owner of the trademark in question under the law of the country of importation.

Source: World Trade Organization. Part III — Enforcement of Intellectual Property Rights. Accessed March 2, 2021. https://www.wto.org/english/docs\_e/legal\_e/27-trips\_05\_e.htm#fnt-14

<sup>&</sup>lt;sup>3</sup> Pirated copyright goods: any goods that are copies made without the consent of the right holder or person duly authorized by the right holder in the country of production, and which are made directly or indirectly from an article where the making of that copy would have constituted an infringement of a copyright or a related right

Aspects of Intellectual Property Rights (TRIPS) agreement. We include diversion/theft as, aside from harming the intended recipients, risks for medicines and vaccines, degradation due to inappropriate storage and transport.

The reports presented here were mostly extracted from the Medicines Quality Monitoring Globe (the MQM Globe is accessible on the IDDO website<sup>4</sup>), a system that scrapes online newspapers (referenced in Google News) for early warnings of SF medical products. In addition, alerts and reports by national and international organisations are included when captured by the members of the team or shared by colleagues. This report also includes scientific literature and policy documents related to COVID-19 medical products quality identified by manual searches in PubMed (Central) and Google Scholar. We also include preprints of articles. Please note that preprints should be viewed with additional caution as they have not been peer-reviewed. They should not be relied on to guide clinical practice or health-related behaviour and should not be reported in news media as established information.

Please note the caveats for the lay literature (<u>MQM Globe disclaimer and caveats are accessible on the IDDO website</u><sup>5</sup>); we include abstracts and extracts from articles that are subject to a take down policy. If we are contacted by a potential rights-holder who objects to the presence of material, we will remove the material in question from the report and Globe until we have been able to assess the case. Where material is removed for valid reasons of copyright, its removal will be considered as lasting until copyright in the material expires, or until the rights-holder agrees that the material can be reinstated.

This eleventh issue of the 'Medical Product Quality Report – COVID-19 Issues' covers information published during the month of April and May 2021. The previous issues covered publications from January 1st 2020 to March 31st 2021 are available on the IDDO6 and MORU7 websites. We also include publications and reports published prior to April 2021 that were missed in the previous issues of the report. From the second issue of the report upon the tenth issue, the report was published monthly. This issue is the first report covering 2 months. We have recently released a system to easily access regulatory authority and international organisation websites for alerts – see the 'Regulatory & alert webpages' section on our MQM Globe. Any remarks or additions to content are greatly appreciated (please write to medicinequality@iddo.org)

under the law of the country of importation.

# 3 Scientific literature

# 3.1 General

Ali F, Russell C, Nafeh F, Rehm J, LeBlanc S, Elton-Marshall T. Changes in substance supply and use characteristics among people who use drugs (PWUD) during the COVID-19 global pandemic: A national qualitative assessment in Canada. *Int J Drug Policy*. Published online April 20, 2021:1-8. doi:10.1016/j.drugpo.2021.103237

Extract. « Results: PWUD [people who use drugs] attributed adverse changes to their substance use frequency, supply, use patterns, and risk behaviors and outcomes to COVID-19. Many participants noted supply disruptions with the majority indicating a decrease in potency and availability, and an increase in the price of substances since COVID-19. Nearly half of participants specified that they had increased their substance use, with some experiencing relapses. In terms of changes to risk level, many participants perceived they were at a greater risk for experiencing an overdose.

Conclusion: This study demonstrated the impacts of COVID-19 on PWUD, including a significant disruption substance supply. For many, these changes led to increased use and substitution for toxic and adulterated substances, which ultimately amplified PWUD's risk for experiencing related harms, including overdoses. These findings warrant the need for improved supports and services, as well as accessibility of safe supply programs, take home naloxone kits, and novel approaches to ensure PWUD have the tools necessary to mitigate risk when using substances. »

Amimo F, Lambert B, Magit A, Hashizume M. A review of prospective pathways and impacts of COVID-19 on the accessibility, safety, quality, and affordability of essential medicines and vaccines for universal health coverage in Africa. Global Health. 2021;17(1):42. Published 2021 Apr 8. doi:10.1186/s12992-021-00666-8

Extract. «We found that the disruption of the international system affects more immediately the capability of low- and middle-income countries to acquire the basket of EMV [Essential medicines and vaccines]. The COVID-19 pandemic may facilitate dishonesty and fraud, increasing the propensity of patients to take substandard and falsified drugs. Strategic regional cooperation in the form of joint tenders and contract awarding, joint price negotiation and supplier selection, as well as joint market research, monitoring, and evaluation could improve the supply, affordability, quality, and safety of EMV. Sustainable health financing along with international technology transfer and substantial investment in research and development are needed to minimize the vulnerability of African countries arising from their dependence on imported EMV. »

Baye AM, Ababu A, Bayisa R, et al. Perspectives of compounding pharmacists on alcohol-based hand sanitizer production and utilization for COVID-19 prevention in Addis Ababa, Ethiopia: A descriptive phenomenology study. *PLoS One*. 2021;16(4):1-15. doi:10.1371/journal.pone.0250020

Extract. « Conclusion. Three of the compounding pharmacists indicated that ABHR production in their setting lack compliance to good compounding practice due to inadequate compounding room, quality control tests, manpower and equipment. Despite this, most study participants preferred the in-house ABHR products than the commercially available ones. Thus, training, regular monitoring and follow-up of the hospital compounding services can further build staff confidence. »

Bourasseau A, Lavergne L, Ravinetto R. Assessments of the quality systems of pharmaceutical distributors: a remote approach to be applied in times of COVID-19 and beyond. J Pharm Policy Pract. 2021;14(1):1-9.doi:10.1186/s40545-021-00323-w

Extract. « Adequate quality systems throughout pharmaceutical supply chains are crucial to protect individuals and communities from substandard and falsified medical products. [...] this pilot experience suggests that a well-planned remote assessment of pharmaceutical distributors, conducted with the support of a well-trained onsite ICAF [in-country assessment facilitator], can provide data of acceptable quality, allowing to assess GSDP-compliance and to make temporary decisions about licensing or purchasing. Purchasers and policy makers should read the results of remote assessments in light of their intrinsic limitations. At the moment, onsite assessments remain the gold standards, but this could change in the longer term, with improved information technology and in light of the need to avoid unnecessary travels. Furthermore, remote assessments could be considered for routine pre-screening candidates for on-site assessments, and for targeted follow-up of on-site assessment. »

Gladys Okafor U, Aderonke Olalaye M, Chukwuemeka Asobara H, Fidelis Umeodinka E. **Global Impact of COVID-19 Pandemic on Public Health Supply Chains.** In: *Evidence-Based Approaches to Effectively Respond to Public Health Emergencies [Working Title]*. IntechOpen; 2021. doi:10.5772/intechopen.97454

Abstract. « Health commodity supply chains are vital to a well-functioning health system and advancing national and regional health security goals. This study describes impacts of the COVID-19 pandemic on these chains, learnings from it and the challenges faced by countries. It also provides futuristic strategic recommendations for the building of the supply chain to manage the impacts and quide pandemic responsiveness. We used the PRISMA quideline for systematic review to collate relevant information from both published and unpublished literature. Out of 622 screened records, 38 were included in the review. Major impacts were innovation, collaboration, increased technology, research and development, increased prices and shortage of health products, depletion of supply chain personnel. Challenges were lack of visibility, coordination, resilience and strategy for pandemics, potential substandard medicines epidemic, travel restrictions and inadequate scientific knowledge. The studies recommended increased local production and resilience of supply chains. The pandemic disrupted national and international supply chain systems of medical devices, essential medicines and pharmaceutical products due to border closures, transportation and international trade restrictions. It however exposed hidden potentials in Sub-Saharan Africa. There is need to develop supply chain strategy for emergencies, increase local production and talent pool for supply chain management particularly in Africa. »

[Preprint] Gutema G, Homa G. Cropping up Crisis at the Nexus between COVID-19 and AMR in Africa: A Scoping Review and Synthesis of Early Evidence. Preprints. Published online May 7, 2021:1-13. doi:10.20944/preprints202105.0152.v1

Extract. « Given the fact that the outbreak of COVID-19 pandemic brought the global supply chains of goods and services essentially to a standstill, the disruption of the supply chains in the international pharmaceutical trade as a result would significantly affect the availability and hence access to antibiotics in most African countries. Such lack of access to antibiotics in situations where the outbreak of the COVID-19 pandemic is further fuelling the consumption of antibiotics would bring a knock-on effect on the demands of antibiotics in healthcare settings and also in the community. In fact, this knock-on effect on the demands of antibiotics coupled with cuts in the production lines at pharmaceutical manufacturers due to the outbreak of the pandemic created shortage of medications in the market. This in turn revitalizes the circulation of substandard or counterfeited antibiotics, the illegal supply chains of which had hitherto been established more in Africa. Such increasing use of substandard and counterfeited antibiotics in Africa would therefore further fuel the three determinants which drive the epidemiology of AMR – emergence, transmission and population-level burden of AROs. In addition, disruption in the

supply chains of pharmaceuticals in Africa exacerbates the already dire conditions of AMR by disrupting the continuous supply of regimens to patients hitherto on antimicrobial treatments. Patients whose supply of antimicrobial regimens disrupted due to the pandemic would either discontinue their treatments or else resort to purchasing counterfeited or substandard products from the black market. Whichever way patients would have to respond to the disruption of their regimens, the end result is one and same – treatment failure. Treatment failure due to discontinuation of regimens (that is using suboptimal quantity) and due to the use of counterfeited drug products (that is using suboptimal quality) ultimately leads to the emergence of AMR. »

Jairoun AA, Al-Hemyari SS, Abdulla NM, et al. Online medication purchasing during the Covid-19 pandemic: potential risks to patient safety and the urgent need to develop more rigorous controls for purchasing online medications, a pilot study from the United Arab Emirates. *J Pharm Policy Pract*. 2021;14(1). doi:10.1186/s40545-021-00320-z

Extract. « Another concern regarding the online self-medication practice during Covid-19 pandemic concerns questions surrounding the purity, quality, and authenticity of the medications that are available. Lately, a safety study was held in Dubai, UAE, by which 6/102 tested alcohol-based skin sanitizers revealed to contain unlisted or undeclared methanol encompassed with the ingredients. Moreover, others revealed containing alcohol of less than 60% although their labels stated to contain alcohol of 70%. A relatively similar survey in Ajman, UAE [United Arab Emirates], lead to shutting two factories down after a great amount of substandard sterilizer was captured—an approximate amount of 40,000 pieces holding a market value of about 500,000 United Arab dirhams. When the placed stickers were removed from the products, the original below sticker unveiled that they were nothing but body spray perfumes, not at all medically sterile products as per pretended. Such unaccepted practices rings the bell for medication safety attention. [...] This research demonstrated that around one-third of those responding had used the Internet to purchase medication during the Covid-19 pandemic. Large-scale longitudinal research should be undertaken to gain further details regarding the purchase of medication online. Additionally, more research should be conducted to investigate and compare the self-medication and associated risk factors between online pharmacies and community pharmacies. »

Miller R, Wafula F, Onoka CA, et al. When technology precedes regulation: the challenges and opportunities of e-pharmacy in low-income and middle-income countries. BMJ Glob Heal. 2021;6(5):e005405. doi:10.1136/bmjgh-2021-005405

Abstract. « The recent growth of medicine sales online represents a major disruption to pharmacy markets, with COVID-19 encouraging this trend further. While e-pharmacy businesses were initially the preserve of high-income countries, in the past decade they have been growing rapidly in low-income and middle-income countries (LMICs). Public health concerns associated with e-pharmacy include the sale of prescription-only medicines without a prescription and the sale of substandard and falsified medicines. There are also non-healthrelated risks such as consumer fraud and lack of data privacy. However, e-pharmacy may also have the potential to improve access to medicines. Drawing on existing literature and a set of key informant interviews in Kenya, Nigeria and India, we examine the e-pharmacy regulatory systems in LMICs. None of the study countries had yet enacted a regulatory framework specific to e-pharmacy. Key regulatory challenges included the lack of consensus on regulatory models, lack of regulatory capacity, regulating sales across borders and risks of over-regulation. However, e-pharmacy also presents opportunities to enhance medicine regulation—through consolidation in the sector, and the traceability and transparency that online records offer. The regulatory process needs to be adapted to keep pace with this dynamic landscape and exploit these possibilities. This will require exploration of a range of innovative regulatory options, collaboration with larger, more compliant businesses, and engagement with global regulatory

bodies. A key first step must be ensuring that national regulators are equipped with the necessary awareness and technical expertise to actively oversee this e-pharmacy activity. »

Tse TJ, Purdy SK, Shen J, et al. **Toxicology of alcohol-based hand rubs formulated with technical-grade ethanol.** *Toxicol Reports*. 2021;8:785-792. doi:10.1016/j.toxrep.2021.03.034

Abstract. « Alcohol-based hand rubs (ABHRs) formulated with technical-grade ethanol were temporarily permitted in Canada and the U.S beginning April 2020 to meet the current demand due to COVID-19. ABHRs formulated with technical-grade ethanol are low risk for general use. In this review, we discuss the toxicity of common contaminants found in technical-grade ethanol, as well as contaminants that may have been introduced into the products during formulation and packaging of ABHRs. Although primary route of exposure is via dermal absorption and inhalation, there have been reported elevated concerns regarding to ingestion of ABHRs. Overall, the highest risks were associated with methanol (for its toxicity), ethyl acetate (skin defattening), and acetaldehyde (carcinogenic and teratogenic). For these reasons Health Canada and the United States Food and Drug Administration have issued recalls on products containing some of these contaminants. More vigilant policing by regulatory agencies and general product users are required to ensure compliance, safety, and efficacy of these new products, as demand continue to rise during this unprecedented pandemic. »

Additional publications from prior to April 2021

Turcotte-Tremblay AM, Gali Gali IA, Ridde V. **The unintended consequences of COVID-19 mitigation measures matter: practical guidance for investigating them.** *BMC Med Res Methodol.* 2021;21(1):1-17. doi:10.1186/s12874-020-01200-x

Extract. « the "very discussion of chloroquine and hydroxychloroquine as therapeutic options against COVID-19 has decreased their availability for proven treatments, exacerbated global shortages, fueled an already rampant counterfeit drug market in Africa and worsened trade tensions." Although these drugs' efficacy to treat COVID-19 patients was not proven, some pharmacies in West Africa reported soaring price inflations, stockouts, and the emergence of informal market supply channels. »

# 3.2 Seizures/Surveys/Case Reports/Reviews

**Falsified COVID-19 vaccine recently identified in Mexico.** Reactions Weekly. 2021;1850(1):4. doi:10.1007/s40278-021-93809-0

Extract. «A falsified COVID-19 Vaccine, called BNT162b2, has been identified in the WHO region of the Americas (specifically Mexico), according to the WHO. In a recent WHO Medical Product Alert, the above-mentioned product was confirmed as a falsified vaccine, which was supplied and administered to patients outside authorised vaccination programmes. The WHO has expressed concern that "this falsified COVID-19 Vaccine may still be in circulation in the region and may continue to be offered to patients outside authorized vaccination programs". »

[Preprint] Samuel E, Babu A, Arjunan S, Mahanty B. **Unravelling the Enigma of Hand Sanitizer In COVID-19-A Bibliometric Analysis of Related Publications Over the Year.** Res Sq. Published online May 21, 2021:1-29. doi:10.21203/rs.3.rs-526772/v1

Extract. « Conclusions: The use of hand sanitizer, ABHSs in particular, remains a front-line defence against the spread of Covid19. From the systematic review on "hand sanitizer" during the ongoing pandemic, the following conclusions can be made. (\*) A significant number of publications on ABHSs are review, editorial, commentary in nature. (\*) Variation in ethanol content in ABHSs related formulation is evident, only a few studies relate their efficacy on

SARS-Cov-2. The efficacy of semi-alcoholic, ayurvedic formulations are either inexistent or poorly described. (\*) Most reports of accidental ethanol exposure from ABHSs are in children, without serious consequences. Few scattered reports are there on intentional ingestion, methanol poisoning from counterfeit sanitizers, and death. Short-term over sanitization-related skin dermatitis in children and healthcare workers have been reported. Though the ABHSs misuse could have been resolved through a better awareness program, campaign, and close monitoring, the flourishing market of fake/spurious products needs to be

Tse TJ, Nelson FB, Reaney MJT. Analyses of commercially available alcohol-based hand rubs formulated with compliant and non-compliant ethanol. *Int J Environ Res Public Health*. 2021;18(7):1-12. doi:10.3390/ijerph18073766

Abstract. « The COVID-19 pandemic led to panic-buying of alcohol-based hand rubs (ABHRs). In response, governmental agencies (e.g., Health Canada) permitted the sale of ABHRs formulated with "technical-grade" ethanol to alleviate the growing demand. Technical-grade ethanol contains elevated concentrations of impurities (e.g., acetaldehyde, etc.), which may exhibit dose-dependent toxicity. In this study, a rapid solvent extraction was employed to analyze gelled ABHRs via gas chromatography with flame ionization detection. In total, 26 liquid and 16 gelled ABHRs were analyzed for nine common impurities to determine compliance with Health Canada interim guidelines. Of 42 samples analyzed, 11 ABHRs appear to be non-compliant with interim Health Canada guidelines. Non-compliant ABHRs exhibited elevated concentrations of acetaldehyde, with a maximal concentration observed of 251 ± 10 μL L−1; 3.3× higher than currently permitted. Nonetheless, frequent testing of ABHRs should be routinely conducted to reduce the risk of consumer exposure to non-compliant ABHRs. »

Accessed June 11, 2021. <a href="https://rm.coe.int/advice-covid19-final-e/1680a24573">https://rm.coe.int/advice-covid19-final-e/1680a24573</a>

Extract. « In 2020, the Committee of the Parties of the MEDICRIME Convention advised Parties, member States of the Council of Europe and other countries on how the Convention could assist in addressing the extraordinary challenges that the COVID-19 pandemic had created for the authorities in such countries. Now that vaccines have been successfully developed to prevent the disease, it is necessary to focus on addressing the emerging challenge facing countries: the production and supply of falsified COVID-19 vaccines. »

MEDSAFE New Zealand Medicines and Medical Devices Safety Authority. **Unapproved COVID-19 vaccines – restriction on importation, manufacture, supply and use.** Policy Statements. Published April 29, 2021. Accessed June 2, 2021. https://medsafe.govt.nz/Medicines/policy-statements/COVID19/Unapproved-COVID-19-vaccine-restrictions.asp

Extract. « Why is this action being taken? The government's goal is to ensure that safe and effective vaccines are available to the New Zealand public to protect the community against COVID-19. Vaccines that have not been approved for use in New Zealand may not meet the required standards for safety and quality – they could be unsafe or ineffective and possibly counterfeit. In order to ensure the public has a reliable supply of vaccine, it is considered important to close off other supply routes that may increase the risk that a vaccine will be

unsafe or ineffective. Unsafe or ineffective vaccines would reduce New Zealand's protection against COVID-19, both for people at high risk and for the whole community. »

Uppsala Reports. **Substandard and Falsified COVID-19 Vaccines in the Americas: Can vaccine equity help?** Uppsala Reports - . Published May 7, 2021. Accessed July 4, 2021. https://www.uppsalareports.org/articles/substandard-and-falsified-covid-19-vaccines-in-the-americas-can-vaccine-equity-help/

Extract. « While COVID-19 vaccinations are picking up speed in many wealthy countries, citizens of lower-income countries still face a long wait. In areas of pent-up demand, the supply of substandard and falsified vaccines is growing. Could vaccine equity help mitigate the risk of compromised products? [...] But if there is increased access to COVID-19 vaccines, the wait can shorten and the demand can be attenuated, reducing the incentives for the supply of SF vaccines. Furthermore, if health authorities administer doses to their people at a higher rate, they can reduce the risk of people being exposed to SF vaccines. Expanded access of the vaccine from public to private sector can also increase vaccination coverage and would be viable when manufacturers increase production and reach to all countries.»

Stone J. How Counterfeit Covid-19 Vaccines And Vaccination Cards Endanger Us All. Forbes - Heal. Published online March 31, 2021. Accessed May 3, 2021. https://www.forbes.com/sites/judystone/2021/03/31/how-counterfeit-covid-19-vaccines-and-vaccination-cards-endanger-us-all/?sh=db6523c36495

Extract. « The black market for Covid vaccines and proof of vaccination is growing rapidly as people tire of restrictions and are anxious to return to normalcy. It is also driven by the inequitable distribution of vaccines, leaving many low- and middle-income (LMIC) countries behind. [...] Fake vaccines—substituting plain salt water for a vaccine, for example—might not cause immediate harm, but may fuel distrust about vaccines' effectiveness. People will falsely assume that they are protected and engage in risky behaviors. Sharing vaccines equitably would also likely slow down counterfeiting drugs, which is particularly a pressure in the poorer countries that don't have access to vaccines that wealthy nations do. »

Additional publications from prior to April 2021

Office of the United States Trade Representative. 2020 Review of Notorious Markets for Counterfeiting and Piracy. 2021. Accessed June 28, 2021. https://ustr.gov/sites/default/files/files/Press/Releases/2020 Review of Notorious Markets for Counterfeiting and Piracy (final).pdf

Extract. « This past year we saw the world adjust to the COVID-19 pandemic, which has significantly affected trends in the trade of counterfeit and pirated goods, as well as the consumption of digital piracy. For example, soon after countries began to go into lockdown, customs authorities began to report significant increases in the seizures of counterfeit personal protective equipment (PPE), medical supplies, and fake COVID-19 cures. Several months later, reports began to surface that COVID-19 lockdowns were leading to a surge in digital piracy, particularly with pirated movies and TV shows. Malware was reportedly added to some pirated content to take advantage of unsuspecting consumers. »

Organisation for Economic Co-operation and Development. *Counterfeiting, Piracy and the Swiss Economy*. 2021. doi:doi.org/10.1787/26175835

Extract. « The COVID-19 pandemic opens new opportunities for profits for criminals running illicit trade networks. Because of the pandemic, people, industry and governments require medicines and protective equipment and this demand often cannot be met in a timely fashion. Notably, the sharp market growth of illicit trade in pharmaceuticals refers not only to COVID-19-

related medicines. Consequently, the COVID-19 pandemic creates additional opportunities for criminals that run networks for trade in illicit pharmaceuticals.[...] Illicit trade in fake medicines infringing Swiss IP rights keeps growing. Interviews with industry experts from Novartis point at the overall growth of 5% of average seizure value in 2020 compared with 2019. Considering the overall drop in enforcement, this suggests that trade in illicit medicines infringing Swiss IP rights has grown by 25% from 2019. Out of all these illicit medicines, 45% are counterfeits, while the remaining 55% came from either theft or diversion. »

# 6 Lay literature

# 6.1 Disclaimer & Notes

The information included below is based on the data used to create the Medicine Quality Monitoring Globe<sup>8</sup> (MQM Globe). It contains publicly available information on the quality of medical products from non-peer-reviewed lay literature. We report the information as it is stated in the articles and can thus be biased towards the authors perspective. It does not necessarily reflect our vision or judgment on the issue. Also, this information usually will not have scientific confirmation. Therefore, the information needs to be interpreted with the greatest caution. We regard the reports as early warnings of potential problems. No or few articles from a region does not imply that the medical product quality there is good, but probably reflects a lack of accessible information. Full disclaimer and caveats can be found at MQM Globe disclaimer and caveats<sup>9</sup>.

The Google News search tool is used to capture data from online news sources. Articles matching the search terms are loaded into a database and curated by trained analysts. Because the Globe system extracts newspaper articles from journals referenced in Google News only, reports not referenced in Google News would not be captured. Please consult the IDDO website for full methodology<sup>10</sup>. On the 20th of March 2020, the search terms were adapted to capture more papers on substandard and falsified (SF) medical supplies for COVID-19 from Google News. In addition, the Globe system captures some of the United States Food and Drug Administration (US FDA) medical product alerts. In the future, we will extend this feature for the US FDA and to other regulatory authorities.

The articles discussed in the sections below are available in the Globe-reports, in this report's annex C, or on the online MQM Globe using the report ID (six or seven digit code). The MQM Globe-reports are generated with pre-defined search terms, which enable quick access to reports of (a) COVID vaccines, (b) COVID diagnostics, (c) Personal Protective Equipment (PPE), (d) Sanitisers & disinfectants, (e) COVID medicines, and (f) Ventilation & oxygenation equipment and consumables. Only the relevant articles included in the MQM Globe-reports are selected for the current COVID-19 report.

In this report we share details of articles captured by the MQM Globe that are linked to medical products potentially used in the context of COVID-19 or to active pharmaceutical ingredients (APIs) that are being trialled for COVID-19 treatment and/or prevention. In theory there is a distinction between (a) SF incidents that are due to or increased by the COVID-19 epidemic; and (b) incidents that would have happened in any case. It can be difficult to make the distinction between the two

<sup>&</sup>lt;sup>8</sup>Infectious Diseases Data Observatory. Medicine Quality Monitoring Globe. Web Page. Published 2020. Accessed July 22, 2021. https://www.iddo.org/medicine-quality-monitoring-globe

<sup>&</sup>lt;sup>9</sup>Infectious Diseases Data Observatory. Medicine Quality Monitoring Globe disclaimer and caveats. Web Page. Published 2020. Accessed July 22, 2021. https://www.iddo.org/medicine-quality-monitoring-globe-disclaimer-and-caveats

<sup>&</sup>lt;sup>10</sup>Infectious Diseases Data Observatory. Medicine Quality Monitoring Globe methodology. Web Page. Published 2020. Accessed July 22, 2021. https://www.iddo.org/medicine-quality-monitoring-globe-methodology

types of incidents and some reports cited below are not directly linked to the treatment of COVID-19. Nevertheless we have included them as they represent crossover risks and help to assess the evolution of the alerts on these medical products over time.

Although oxycodone is being trialled for COVID-19 treatment<sup>11</sup>, we do not include issues related to oxycodone as the system would become swamped by reports on its inappropriate use and cases of pills laced with fentanyl due to their wide occurrence on the black market.

For this report, we only included data that were published in English. For articles in French, Spanish, Mandarin, and Vietnamese; please consult the online MQM Globe. We will continuously work to improve the MQM Globe. Any remarks or additions to content are encouraged (please write to <a href="mailto:medicinequality@iddo.org">medicinequality@iddo.org</a>).

Changes in methodology since the last Medical Product Quality Report COVID-19 issues (with data till March 2021)<sup>12</sup>

There were some minor changes in methodology since the last 'Medical Product Quality Report – COVID-19 issues'.

- PPE category: 'face shield' was added to the key terms applied to search the Globe database to compile the PPE Globe-report.
- COVID-19 medicines category: 'Amphotericin' was added to the key terms applied to search the Globe database to compile the COVID-19 medicine Globe-report. Although the product is not used as direct treatment for COVID-19 it has been included in the search terms. Amphotericin is used to treat mucormycotic, a fungal infection increasingly reported in patient that previously suffered from COVID-19.

Please read more about the changes in methodology since the first report that was published in July 2020 in Annex A.

<sup>&</sup>lt;sup>11</sup>Hashemian SRM. Evaluation the effects of Oxycodone administration on pain control in patients with COVID-19. Iranian Registry of Clinical Trials. Published June 8, 2020. Accessed October 9, 2020. https://en.irct.ir/trial/48534

# 6.2 Articles on diverted, substandard or falsified medical products for COVID-19: main characteristics

Since the beginning of the pandemic we have identified 749 relevant articles on quality problems of COVID-19 medical products. In this issue we report on 127 relevant articles: 54 articles for April 2021 and 73 articles for May 2021 (Figure 2). The rise in number of relevant articles is mainly related to the growing number of articles related to COVID-19 medicines. In May we notice also a larger number of articles related to incidents with ventilation & oxygenation equipment and consumables.

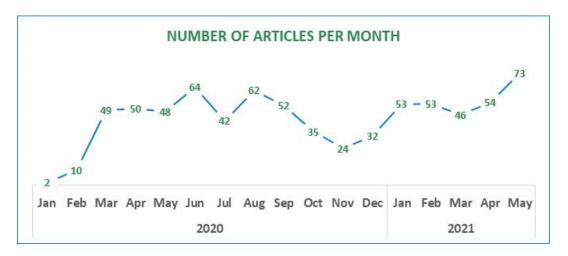

Figure 2. Number of articles on the Medicines Quality Monitoring Globe linked to substandard or falsified COVID-19 supplies by month.

As some articles describe more than one category of products, the sum of alerts per month as shown in figure 3 and 4 may exceed the sum of articles per month of Figure 2.

NOTE (1) SINCE NOVEMBER '20, NON-COVID-19 MEDICINES CONTAINING HIDDEN API(s) THAT IS/ARE USED OR TRIALLED FOR COVID-19 ARE NO LONGER INCLUDED IN THE COVID-19 REPORTS. ONLY MEDICINES FOR WHICH THE STATED API IS USED OR TRIALLED FOR COVID-19 TREATMENT ARE INCLUDED IN THE COVID-19 REPORT. THE OBSERVED DECREASE OF THE NUMBER OF ARTICLES CAN BE AT LEAST PARTIALLY DUE TO THIS CHANGE.

NOTE (2) SEARCH TERMS FOR COVID-19 VACCINES THEFT AND DIVERSION HAVE BEEN ADDED, THE OBSERVED RISE IN THE NUMBER OF ARTICLES FROM JANUARY '21 CAN BE AT LEAST PARTIALLY DUE TO THIS CHANGE.

The articles we discuss for April and May include 135 alerts: 4 alerts on diagnostics, 15 on personal protective equipment (PPE), 15 on ventilation equipment, 17 on sanitisers and disinfectants, 24 on vaccines, and 60 on COVID-19 related medicines. Figure 3 shows the number of alerts for each category by month since the beginning of the pandemic. The number of alerts for each category by week since January 2021 is shown in Figure 4. To see the number of alerts for each category by week since the beginning of the pandemic, please consult Annex B.

For the months of April and May, the MQM Globe reported incidents in India more than any other country; India was experiencing its second wave and the demand for COVID-19 supplies drastically exceeded the supply. Almost two third of the articles (63,8%) reported on diverted, substandard or falsified COVID-19 incidents in India.

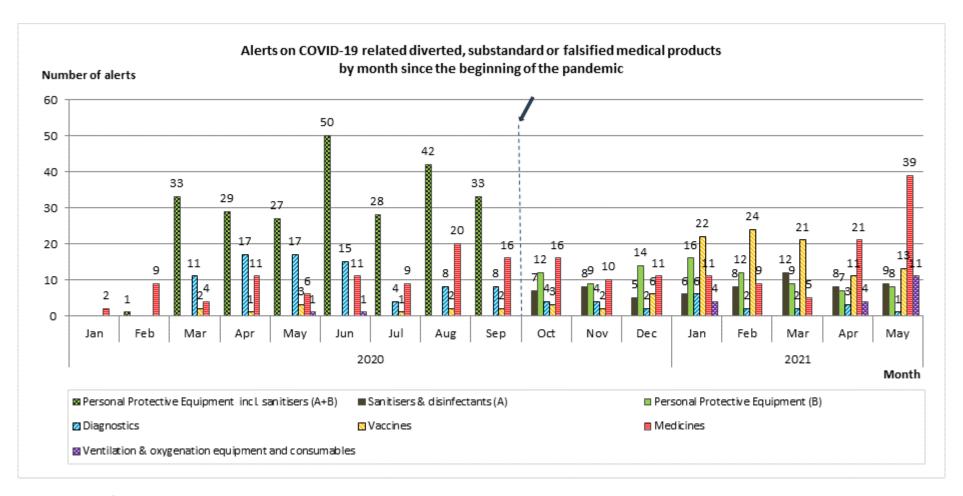

Figure 3. Number of alerts on the Medicines Quality Monitoring Globe by product category and by month.

Alerts are for substandard or falsified products linked to COVID-19. As some articles describe more than one category of products, the sum of alerts per month may exceed the sum of articles per month reported in Figure 2. The arrow indicates the end of September when the category of 'Personal Protective Equipment Incl. sanitisers' was split in two distinct categories: (A) Sanitisers and disinfectants, and (B) Personal Protective Equipment.

Note (1). Since November, non-COVID-19 medicines containing hidden API(s) that is/are used or trialled for COVID-19 are no longer included in the COVID-19 reports. Only medicines for which the stated API is used or trialled for COVID-19 treatment are included in the COVID-19 report. The observed decrease of the number of articles on medicines can be at least partially due to this change.

NOTE (2). SEARCH TERMS FOR COVID-19 VACCINES THEFTS AND DIVERSION HAVE BEEN ADDED, THE OBSERVED RISE IN THE NUMBER OF ARTICLES FROM JANUARY '21 CAN BE AT LEAST PARTIALLY DUE TO THIS CHANGE.

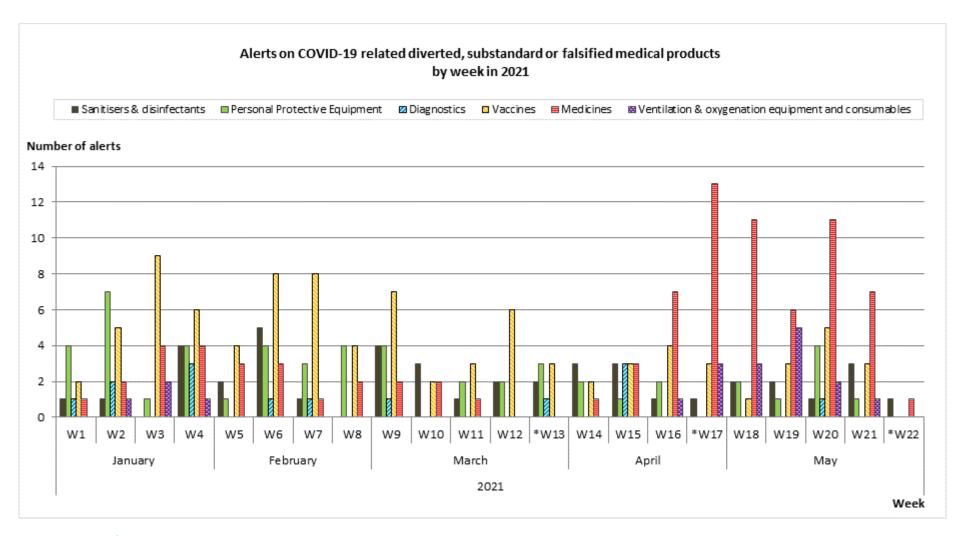

Figure 4. Number of alerts on the Medicines Quality Monitoring Globe by product category and by week in 2021.

ALERTS ARE FOR SUBSTANDARD OR FALSIFIED PRODUCTS LINKED TO COVID-19. THE FIGURE STARTS IN WEEK 1, MONDAY 4<sup>H</sup> OF JANUARY, 2021 AND ENDS ON WEEK 22, MONDAY 31st OF MAY, 2021. WEEKS WITH AN ASTERISK (\*) ARE OVERLAPPING 2 MONTHS, EACH TIME THE WEEK IS ATTRIBUTED TO THE EARLIEST MONTH. AS SOME ARTICLES DESCRIBE MORE THAN ONE CATEGORY OF PRODUCTS, THE SUM OF ALERTS PER MONTH MAY EXCEED THE SUM OF ARTICLES PER MONTH REPORTED IN FIGURE 2. THE ARROW INDICATES THE END OF SEPTEMBER WHEN THE CATEGORY OF "PERSONAL PROTECTIVE EQUIPMENT INCL. SANITISERS" WAS SPLIT IN TWO DISTINCT CATEGORIES: (A) SANITISERS & DISINFECTANTS, AND (B) PERSONAL PROTECTIVE EQUIPMENT.

### 6.3 Vaccines

The potential impact of the quality issues discovered at the manufacturing plant Emergent BioSolutions, a subcontractor producing both the Johnson & Johnson (J&J) and the Oxford-AstraZeneca COVID-19 vaccine in Baltimore (USA), is increasing in magnitude. In the previous COVID-19 medical product report we noted that 15 million doses of the Johnson & Johnson (J&J) COVID-19 vaccine needed to be discarded in March 2021. All the doses were produced by Emergent BioSolutions. Allegedly, in late February, there was a mix-up between the vectors of J&J and the Oxford-AstraZeneca vaccine. In early April, an article reported that an additional 62 million doses could have been contaminated and needed additional screening (report ID 1011051). In May, the CEO of Emergent BioSolutions said that in total 100 million doses of the J&J vaccines were on hold and needed to be screened for possible contamination (report ID 1071640). The CEO apologized for the quality issues that emerged at his manufacturing plant. The US FDA is conducting a thorough review, and will decide on release or destruction of the potentially affected batches<sup>13</sup>.

# 6.3.1 April

#### Diversion

In Florida, USA, ten vials of J&J COVID-19 vaccine were stolen from a refrigerator from a medical centre (report ID 1013423). A police investigation is ongoing. We have seen 2 reports on COVID-19 vaccines that were missing and probably stolen from hospitals in India. In Jaipur, Rajasthan state, 320 doses of Covaxin were allegedly stolen (report ID 1020922). Covaxin is the vaccine produced by the Indian manufacturer Bharat Biotech. It is feared that the doses will be diverted to the black market. In Jind district, Haryana state, a total of 1,710 doses went missing: 1,270 doses of Covishield and 440 doses of Covaxin (report ID 1031435). Investigations are ongoing.

## Purported COVID-19 vaccines

In Germany, an investigation is continuing into a nurse who replaced six COVID-19 vaccine doses with saline water (report ID 1038395). The nurse allegedly accidently dropped the Pfizer/BioNTech vial and to cover up the loss, she replaced the lost doses with saline injections. The case came to light four days after the event when the nurse confided in her colleague.

-

<sup>&</sup>lt;sup>13</sup> Meanwhile on June 11 2021, the US FDA shared in a press release that it allowed for the release of 2 batches of J&J COVID-19 vaccine that are suitable for use. At the same time they announced that some batches are still under review and several other batches were found to be not suitable for use because of possible contamination. Source: U.S. Food & Drug Administration. FDA Takes Steps to Increase Availability of COVID-19 Vaccine. Press Announcements. Published June 11, 2021. Accessed June 21, 2021. https://www.fda.gov/news-events/press-announcements/fda-takes-steps-increase-availability-covid-19-vaccine

An article in the Wall Street Journal reported on the seizure of falsified COVID-19 Pfizer/BioNTech vaccines in an apartment in Poland (report ID 1030129). According to Polish authorities no one received the falsified vaccine that was reported to contain an antiwrinkle treatment. Articles in the Polish press reported some additional information<sup>14,15</sup>. In mid-January a journalist bought 2 vials online of purported Pfizer/BioNTech COVID-19 vaccine. Analysis by the Jagiellonian University showed that it was a falsified vaccine. A separate analysis, apparently by Pfizer, allegedly showed the vials contained some hyaluronic acid. The seller was detained in January. The suspect was already being followed by the police for suspected online COVID-19 vaccine offers.

# Information shared by PAHO

The Pan American Health Organization (PAHO), published a warning that COVID-19 vaccines not bought through the official recognized system are considered to be falsified and a risk for public health 16. In the warning PAHO says it has reports of falsified and unauthorised vaccines amongst others in Bolivia, Colombia and Mexico (report ID 1034582). In another article, during an interview the Deputy Director of PAHO, Jarbas Barbosa, said PAHO received information on illegal COVID-19 vaccines sold through social networks in Mexico, Argentina and Brazil (report ID 1030705). He highlights that these vaccines are probably falsified or diverted and that good storage conditions cannot be ensured. In previous issues of the COVID-19 medical product reports, we reported on lay press articles dealing with SF COVID-19 vaccine issues in Colombia, Mexico, and Brazil. In February, AGEMED the Medicines Regulatory Authority of Bolivia had issued an alert<sup>17</sup> on illegal offers of Sputnik V vaccine on social media. However, only now with the recent lay press articles on the PAHO press release and the interview with the deputy director of PAHO, lay press articles in the MQM Globe are referring to reports for falsified or unauthorized vaccines in Bolivia and of illegal COVID-19 vaccines in Argentina.

#### Miscellaneous

The Korea Disease Control and Prevention Agency ordered a recall of Doowon Meditec defective syringes used to administer the AstraZeneca COVID-19 vaccine (report ID 1025296). There are reports that the low dead space syringes produced by the local manufacturer Doowon Meditec, had a wrong scale marking and contained contaminants. At the time of the recall 500,000 syringes had already been

\_

<sup>&</sup>lt;sup>14</sup> "Raport": zarabiają na strachu przed epidemią. Czarny rynek szczepionek nadal kwitnie - Polsat News. Accessed May 7, 2021. https://www.polsatnews.pl/wiadomosc/2021-03-02/raport-zarabiaja-na-strachu-przed-epidemia-czarny-rynek-szczepionek-nadal-kwitnie/?ref=article

used to vaccinate people; the remaining 700,000 syringes were recalled. Problems are reported for some serial numbers but all syringes were recalled out of precaution. An investigation is ongoing looking into the quality and safety concerns.

In the USA, an article reported on a pharmacist, a Director of pharmacy at a hospital in Illinois, who was selling empty COVID-19 vaccine vials (report ID 1043609). The empty vials were offered as a pair, one Pfizer/BioNTech and one Moderna vial, on Craigslist as "Own a piece of history". The sale of empty COVID-19 vaccine vials might attract criminals wanting to produce falsified versions; nevertheless the pharmacist claimed he did not realise selling empty vials was problematic. The pharmacist did violate the applicable guidelines for vaccine packaging disposal. The same article suggests that an offer on eBay, for 28 pairs of vials that have been sold, was published by the same person.

At a clinic in Colorado Springs (USA), 3,150 doses of the Pfizer/BioNTech COVID-19 vaccine had to be thrown away (report ID 1021500). There were concerns of a lack of consistent temperature monitoring and possible temperature excursions. After an investigation, the Colorado Department of Public Health and Environment (CDPHE) confirmed that the vaccines storage and handling were substandard. Almost 4,000 people had already been vaccinated at the clinic, and it was recommended that they should be revaccinated with two doses of the Pfizer/BioNTech vaccine.

## 6.3.2 May

Theft and diversion

In the USA, 2 incidents of stolen COVID-19 vaccines were reported. At a dental practice in Washington, 100 vials of J&J COVID-19 vaccine were stolen together with medical equipment and a vial of Botox (report ID 1043734). A few days later an article reported that the COVID-19 vaccine vials were found in bushes and the suspect was arrested<sup>18</sup>. In Minnesota, a medical clinic reported the theft of a Pfizer/BioNTech vaccine vial (report ID 1057163). An investigation is ongoing, the suspect allegedly recorded and posted the theft on social media.

We report on 3 cases of theft and diversion linked to COVID-19 vaccines in India. In Maharashtra state, the police are investigating a case where thieves broke into a health facility and stole 300 vials of vaccines destined for different types of child immunization (report ID 1078285). All the stolen vials bore labels of the Serum Institute of India. The police suspects that the criminals were looking for the Covishield COVID-19 vaccine produced by the Serum Institute of India. During an audit in a health centre in Andhra Pradesh state, a doctor noted that 40 doses of Covishield were missing (report ID 1063860). Three health care workers are suspected of the theft, that probably took place during transport from the cold chain storage to the vaccine centre. In Bangalore, Karnataka state, two women were arrested for allegedly illegally selling COVID-19 vaccines (report ID 1068658). The

-

<sup>&</sup>lt;sup>18</sup> Winsor M. Authorities arrest man accused of stealing 100 vials of COVID-19 vaccine. abcNEWS. Published May 6, 2021. Accessed June 7, 2021. https://abcnews.go.com/US/authorities-arrest-man-accused-stealing-100-vials-covid/story?id=77526515

vaccines should have been administered for free to the public but were sold for Rupee (Rs) 500 (approximately 6.8 USD) per dose. After the police was alerted about the illegal practice, they posed as potential buyers after which the women were caught.

#### Fraudulent offers

Dr Reddy, an Indian pharmaceutical company that is the official distributor for Sputnik V in India, started legal action against entities offering fraudulent Sputnik V vaccines (report ID 1078624 in Chinese). Although Dr Reddy reported no third party agreement for the distribution, they received several reports of entities offering the Sputnik V COVID-19 vaccine in different locations in India.

At Silchar Civil Hospital in the state of Assam (India), hospital officials were allegedly involved in the black market of COVID-19 vaccines (report ID 1086365). An investigative journalist reported on an alleged unauthorised COVID-19 vaccine centre selling vaccines of unknown quality. A witness was said to have paid Rs 1,000 (approximately 13.7 USD) for a vaccine shot. The superintendent of the hospital claims not to be aware of a secret vaccination chamber. One of the alleged employees says the centre is officially open for waste management, collecting unused doses in open vials and administrating them to ensure zero wastage. However, several aspects of the vaccination room reported did not seem compliant with regulatory guidelines and no medical waste management was in place. Three open vaccine vials were found, and the journalist suggested that at least 30 vaccine doses were diverted or even more since at least 50 used vaccine syringes were found. A video revealed that empty Covaxin and Covishield vials were found on the spot.

# Online and dark web offers

In an article one of the regional directors of Pfizer global security revealed falsified Pfizer/BioNTech COVID-19 vaccines being sold online that allegedly appear to be made with pesticides and wallboard (report ID 1095520).

Several articles reported on COVID-19 vaccine offers on the dark web. We report on two of these articles in which concrete examples are highlighted. One article gives examples of offers of Sputnik V, 1,000 doses for 4,000 USD, and Pfizer/BioNTech, 800 doses for 20,000 USD (report ID 1048306). The other article gives examples of COVID-19 vaccine offers<sup>19</sup> from Pfizer-BioNTech for 500 USD and 10 Moderna vaccines for 2,000 USD (report ID 1069276). The sellers are advertising products on 'clear web' apps (such as WhatsApp, Gmail, Wickr, and Telegram) and refer to products on various dark web marketplaces. The advertisements claim the vaccines are coming from the USA or the United Kingdom. The articles suggest that probably many of the online vaccine offers are fake. Some of them might be stolen genuine vaccines, for which the quality cannot be guaranteed due to irregularities in the cold chain management.

\_

<sup>&</sup>lt;sup>19</sup> It is not clear from the article if the price is per dose or vial.

In addition to the COVID-19 vaccines, both articles discussed above report on the offer of fake vaccination certificates and fake test results. The cybersecurity firm FireEye Inc, a US based company, links the offer of the three types of products (vaccines, vaccination certificates and test results) to an increased demand for immunization in Europe (report ID 1048306). Currently many European citizens are not vaccinated yet but in order to travel they need to prove they are vaccinated or have a negative COVID-19 test result. According to research from the cybersecurity company McAfee, offers of falsified COVID-19 vaccination certificates and test results have outnumbered the COVID-19 vaccine offers since mid-April 2021 (report ID 1069276). McAfee links the observation to people who did not have the chance to get a vaccine yet or are not willing to get vaccinated but need the certificates in order to attend certain activities and events.

#### Miscellaneous

In the USA, concerns were reported over the quality of possibly 16,000 administered Pfizer/BioNTech COVID-19 vaccines (report ID 1067060). Centers Urgent Care, a health care company that is running several vaccination sites in New York City, is being sued by a former employee. The higher management allegedly instructed the vaccinators to over dilute the Pfizer/BioNTech vaccine vials in order to be able to draw 7 doses instead of the regular 5 to 6 doses. Over dilution of the vaccine might lead to reduced efficacy. The medical director of the company refuted the allegations. During a recent visit, the New York City Health Department could not identify irregularities.

In Uttar Pradesh state in India, an investigation started after 29 syringes filled with alleged COVID-19 vaccine were found in a dustbin in a Health Centre (report ID 1074206). It could represent fake vaccination in which the vaccinator pretended to give the injection but withdrew the needle without injecting the liquid. The motives for this action are unclear. There is no information on the quality of the vaccine and what the syringes actually contained. However if the syringes were filled with genuine COVID-19 vaccines, such actions will clearly lead to reduced effectiveness of vaccination programmes, leading to people thinking that they are protected when they are not.

# 6.4 COVID-19 diagnostics

## 6.4.1 April

In April, three falsified COVID-19 diagnostic test incidents were detected. In Dhaka, Bangladesh, nine people were arrested by the Rapid Action Battalion (RAB) for manufacturing and marketing substandard, falsified and unlicensed testing kits for COVID-19 along with other medical equipment (report ID 1024193). The individuals arrested were allegedly from three different organizations: BioLab International, Axon Technologies and Services Ltd, and Hi Tech Health Care Ltd. In Manila, Philippines, the national police seized over 30 million Philippine Peso (P) (approximately 6 million

USD) worth of fake COVID-19 test kits in an operation (report ID 1021704). In the UK, the Department of Health and Social Care warned the public of the risk of inauthentic COVID-19 testing kits sold online (report ID 1022574). The article reports mainly the sale of 'Innova' testing kits sold in a box of 25 for £150 (approximately 200 USD) on social media sites such as Facebook.

# 6.4.2 May

In May, only one report of substandard and falsified COVID-19 diagnostic tests was found. McAfee, a cybersecurity company, found COVID-19 antibody home test kits for sale for 152 USD each on the dark web (report ID 1069276). The brands of testing kits found on the dark web include 'Nova Test', and the authenticity of the testing kits could not be verified.

# 6.5 Personal protective equipment

# 6.5.1 April

One Canadian report explained the results of a study that showed KN95 and KF94 masks purchased from Amazon, Walmart and sites such as WELL.Ca might be substandard as they failed to meet the filtration efficiency standard of 95% (KN95) or 94% (KF94) (report ID 1005307). Fourteen KN95 and KF94 respirator brands were purchased from Amazon and big-box stores, and half of the brands failed to meet the standard. Some masks purchased on Amazon have a filter performance of approximately 20%, much lower than the efficiency standard. Other masks in circulation were lower than the efficiency standard by less than 2%; these masks were sold in Home Depot, Home Hardware, and Amazon. It is important to note that many KN95 and KF94 masks purchased on Amazon, Lowes, Costco, and Dollarama meet the filtration standard. The report found that many of the masks that failed to meet the filtration standard have the FDA logo on the product packaging although no masks provided by the private sector are authorised to do so.

Another Canadian report highlighted the recall of disposable masks issued by Health Canada (report ID 1005409). The agency advised the public to avoid masks containing graphene or biomass graphene because preliminary research suggests they cause early lung toxicity in animals; however, the risk to humans is not yet known.

In April, reports mentioned that falsified face masks reached hospitals in the USA (report ID 1007639). A hospital worker at a Massachusetts hospital noticed a shipment of 30,000 falsified 3M N95 surgical face masks that potentially could have risked the health of frontline medical workers. The plastic of the primary packaging and labels on the face masks' secondary packaging was different from the regular shipments.

In Manila, Philippines, P65 million (approximately 1.3 million USD) worth of smuggled electronic items and counterfeit personal health care products and devices were seized (report ID 1033977). These items included fake 3M and KN95 face

masks, respirators and the Aidelai brand of face mask, which the government does not license for distribution in the Philippines. In addition, US Customs and Border Protection (CBP) at the Houston Seaport intercepted a shipment of falsified N95 masks worth 350,000 USD that allegedly originated in China (report ID 1023154). Over 171,000 of the masks seized had the National Institute for Occupational Safety and Health (NIOSH) logo on their packaging. In the Houston area of operations alone, more than 2 million counterfeit PPE masks were seized between January and March 2021, a significant jump compared with 2020. The US CBP has seized approximately 18 million falsified masks in the first three months of 2021 alone. This is a significant increase compared to 12 million in 2020 and only 1,300 falsified masks in 2019.

In Indonesia, local news outlets recently reported fake medical grade-labelled face masks being openly sold online and at physical stores (report ID 1007105). These include surgical masks and KN95 masks that do not comply with the ministry's standards.

The authorities in Singapore reported more than 41,000 allegedly falsified masks seized during an operation, resulting in an arrest of a 34-year-old man (report ID 1029657). Tests are being conducted on the suspected trademark-infringing respirators, worth over 201,000 USD, to ascertain if they are falsified.

# 6.5.2 May

In May an article reported further on the issue that the U.S. federal government seized 3.6 million USD from the bank account of Med-Tech Resource LLC, involved in an agreement to sell the state 4.5 million USD in overpriced falsified N95 masks (report ID 1063771). Allegedly the company sold 1.8 million falsified 3M masks to the state of Maine. The masks had misspelt or missing markings or approval numbers by the National Institute for Occupational Safety and Health.<sup>20</sup>

A hospital network based in Ohio (USA), Kettering Health Network, is sueing 'Fully Protected' for more than \$1.2 million, accusing the company of delivering 300,000 falsified N95 and 3M in December 2020 (report ID 1051017).

An article reports that the Consumers Association of Singapore noticed that amongst the complaints they receive regarding online crime, surgical masks were the most common product (report ID 1095520). The same article also reported that as of April 19 2021, the company 3M has investigated 13,800 reports linked to fraud involving respirator and mask and had filed 33 lawsuits in the USA and Canada.

In India, the NGO Friends of Wadala East placed a bulk order on Amazon on the 2nd of May for 400 surgical masks for healthcare workers (report ID 1071075). The masks were delivered on the 8th of May but were substandard and did not conform

\_

<sup>&</sup>lt;sup>20</sup> Medicine Quality Research Group, University of Oxford. Medical Product Quality Report – COVID-19 Issues. Issue 9, February 2021], we reported that the state of Maine was affected by a national recall on N95 masks with falsification issues. The state authorities had distributed approximately 161,000 masks of the affected batch to health care facilities, schools and state employees.

to the description advertised. The article did not specify the nature of the substandard masks.

In the U.K., the City of London Police seized 25,000 falsified face masks originating from Hong Kong (report ID 1046581). The police assumed that the masks were going to be advertised and sold online as medical grade masks. In the Philippines, boxes of suspected falsified face shields, worth estimated at P70 million (approximately 1.4 million USD), were seized by the National Bureau of Investigation-National Capital Region (NBI-NCR), Bureau of Customs, and Philippine Coast Guard (Report ID 1068555). Furthermore, two tons of surgical gloves were seized in Tanza, Philippines. Neither articles specified the brands or type of face masks, shields and gloves that were seized.

In Oman, one type of face mask was found to be contaminated with dust and impurities and examination showed that the masks did not meet the quality standards (report ID 1081084). The Ministry of Health in Muscat, issued a circular to withdraw and suspend the circulation of masks with the affected registration number. Note that the report did mention a registration number, but did not state the manufacturer, nor the type of face mask.

In Australia, fashion giant 'Mosaic Brands' has been fined \$630,000 after admitting to false, misleading and deceptive marketing face masks and hand sanitizers at the height of the COVID-19 pandemic (report ID 1084248). The breaches included advertisements on masks certified by European and US standards, when they were not.

# 6.6 Sanitisers and disinfectants

In April and May, there were 17 reports of substandard and falsified sanitisers across seven countries.

**US FDA** 

The US FDA published warning letters in April and May to 5 different Mexican companies and one Chinese company concerning the quality of their hand sanitisers. The goods were detained and refused admission at the US border because they were adulterated and not approved by the US FDA. For 'Hou Fu Biotech - Jiangsu Co., Ltd' the hand sanitiser was wrongly labelled to contain 70% v/v ethanol. However, the FDA laboratory testing of a batch of this product found that the sanitiser contained an average of 45% ethanol (report ID 1028564).

For 4 companies, the hand sanitisers were wrongly labelled to contain 70%v/v ethanol, but the ethanol was substituted wholly or in part with methanol. This was the case for 'C&G Laboratorios SA de CV' with an average of 1.1% ethanol and 65% methanol v/v (report ID 1056092), for 'Roque Plast S.A. de C.V. Roque Plast' with an average of 38% ethanol and 25% methanol v/v (report ID 1019654), for 'MYM Hidrominerales S.A. de C.V.' for which the batches contained on average 0.05% v/v

ethanol and 79 % v/v methanol (report ID 1019652), for 'Incredible Products, SA de CV' with an average of 1.2% ethanol and 67% methanol (report ID 1083350), and for 'Neoingenium Labs, SA de CV' with an average of 9.6% ethanol and 58% methanol (report ID 1009118).

In the USA, online pharmacy 'Valisure' detected benzene as well as contaminants that are potential carcinogens in several batches across multiple brands of hand sanitizers by independently testing the medications it sells (report ID 1041850). Valisure asked the US FDA to request an immediate recall of the affected batches. The US FDA announced that 'Scentsational Soaps & Candles' issued a voluntary nationwide recall of scented hand sanitizers due to the presence of benzene, methanol, and acetaldehyde from stores such as Ulta Beauty, TJ Maxx, and Marshalls retail stores.

#### India

Five articles on substandard and falsified sanitizers were recorded in India in the months of April and May.

In Chennai, Tamil Nadu state, the state drug control department booked 132 companies for producing and selling substandard hand sanitizers during the pandemic (report ID 1024996). The companies were using high levels of toxic methanol while preparing sanitizers. Samples were collected from around 300 locations including retail pharmacy stores, wholesalers, distribution points, and manufacturing units. A laboratory analysis showed that 82 sanitizers did not meet prescribed standards; 32 sanitizers contained adulterated content, two sanitizers were falsified and 48 sanitizers were substandard.

In Raipur, Chhattisgarh state, the police department and FDA seized a collection of adulterated sanitizers from the premises of a cloth businessman (report ID 1051442). Fourteen thousand litres of adulterated sanitizer were recovered and the sanitizer contained a mixture of methyl alcohol and other hazardous materials.

Another article reported on an analytical report in India sent by the State Drug Control and Central Drug Control Authorities, revealing that 11 samples of hand sanitisers failed the test (report ID 1079370). Out of these, four samples were declared as falsified while six samples as 'Not of Standard' quality and one sample as 'misbranded'.

In Surat, Gujarat state, the Prevention of Crime Branch Team caught a falsified hand sanitizer manufacturing and distribution racket operating from a farm in Mota Varachha (report ID 1053408). The sanitizers being produced contained methyl alcohol, i.e. methanol, which can prove dangerous to health. The police recovered valuables worth Rupee (Rs) 7.93 lakh (approximately 11,000 USD) and arrested three individuals. Nearly 1,200 litres of methanol, 900 litres of falsified sanitizer, and 1,300 containers and other material were seized.

In Vijayawada, Andhra Pradesh state, several street vendors were reported as becoming part of a chain selling falsified sanitisers which fail to meet quality standards (report ID 1082549). Organised rackets in the city were described as

diluting alcohol content and manufacturing duplicate sanitisers not protecting the public from viruses.

#### Cambodia

Two articles on falsified sanitisers in Cambodia were reported in April and May. According to the Ministry of Commerce's General Directorate of Consumer Protection, Competition and Fraud Repression (CCF), more than 40 tonnes of falsified alcohol sanitisers have been seized in Cambodia since February 2020 (report ID 1065853). The falsified sanitisers were sold in many ways, including on social media. In one day in May 2021 alone, CCF officials confiscated 183 cans – more than 5,000 litres – of falsified alcohol sanitiser in Prey Sar commune's Prakar village in Phnom Penh's Dangkor District. During 2020, the CCF seized and burned 94 tonnes of falsified alcohol sanitiser and some of the seizures resulted in arrests (report ID 1011036). The sale of falsified alcohol-based sanitising solutions and gels decreased in the first three months of 2021, as greater awareness spread within the business community about the issue. Recently, out of 78 samples taken and tested for analysis, only two of them turned out to be falsified.

#### Various

Since the beginning of 2021, Health Canada recalled 37 hand sanitizers not meeting the health agency's requirements: in April the list held 27 products, in May it was updated to 37 (report IDs 1059219 & 1007871). These include brands that contain ingredients that are not permitted by Health Canada (such as ethyl acetate, methanol and 1-propanol); have improper labelling; are missing risk statements; are unauthorized for sale in Canada; are being sold without proper product testing; are falsified; or have defective packaging.

In Australia, fashion giant 'Mosaic Brands' has been fined \$630,000 after admitting to false, misleading and deceptive marketing of hand sanitisers and face masks at the height of the COVID-19 pandemic (report ID 1084248). The breaches included inaccurately advertising hand sanitiser as containing 70% alcohol, when it actually only contained 17%.

# 6.7 COVID-19 medicines

Figure 5. Incidents of diverted, substandard and falsified COVID-19 medicines in India between 1st of April till 31st of May 2021.

Source: Medicine Quality Monitoring Globe

In April and May most of the reported incidents (60) concerned diverted, substandard or falsified (SF) COVID-19 medicines. All but one of the detected articles on COVID-19 medicines reported incidents in various states in India (Figure 5). The diverted and SF medicines reported include, amongst others, remdesivir, amphotericin B and tocilizumab. This report highlights a surge of diversion and falsification of remdesivir that was not seen in previous reports. Out of the 60 articles on COVID-19 medicines, 53 (88.3%) reported on remdesivir.

The official price of a remdesivir vial in India is Rupee (Rs) 2,450 (approximately 30 USD) <sup>21</sup>, but the articles below show that it is being sold for much more than this. Often articles that report on sales on the black market do not mention whether the products are genuine or falsified. If

the article mentioned the products are falsified, we report it under the relevant header of falsification. In the section on black market sales, we report on articles that do not specifically mention the quality of the product. We regard black market sales as diverted. We argue that products sold on the black market are a problem for the following reasons. Firstly, they are taken from people that were supposed to receive the product. Secondly, products on the black market risk degradation due to improper handling and storage. Currently, the reports do not provide evidence on degradation of products on the black market since it is not something that is investigated at the moment. We use the term black market when the article uses it.

We tried to order the incidents by medicine involved and by quality issue. Due to the large number of articles on Remdesivir, they are subdivided by the Indian states or territory in which the incident is reported to have taken place or where the arrest or seizure took place. Some articles discuss several medicines or several incidents, and some incidents are not straight forward to classify; thus the subdivision might be arbitrary. We only discuss the articles once below even if they could be classified under different subheadings.

<sup>&</sup>lt;sup>21</sup> Business Standard.Govt slashes Remdesivir price by half to Rs 2,450 with retro-effect. News. Published April 17, 2021. Accessed July1, 2021.

https://www.business-standard.com/article/current-affairs/govt-slashes-remdesivir-price-by-half-to-rs-2-450-with-retro-effect-121041700373\_1.html

# 6.7.1 April

Out of the 21 reports in our MQM Globe in April on medicines trialled or used in the treatment of COVID-19, only 2 reports did not mention remdesivir. The first article reports that 'Sun Pharma' recalled over 13,800 bottles of Riomet (metformin hydrochloride oral solution) in the USA due to 'Microbial Contamination of Non-Sterile Product' (Report ID 1071719).

The second article reported on 25 individuals in 12 states in India, marketing 'medicines' worth five crores (approximately 670,000 USD; report ID 1025572). They were involved in producing and selling "spurious COVID-19 drugs". The stocks produced by the racket in the last year have been seized. Tests confirmed Dewciff-AZ tablets (Cefixime, Azithromycin and Lactic Acid Bacillus tablets), Azidew-250 (Azithromycin tablets), FIXRAT-AZ and four other brands of tablets contained no active ingredients. The falsified tablets were stated to be manufactured by HPHIN Pharmaceuticals, a fictitious manufacturer's name, and reported to be manufactured at 'Kancare Pharmaceuticals Private Limited' in Uttarakhand.

#### 6.7.1.1 Falsified remdesivir

## Delhi, India's capital territory

The Indore Police Crime Branch arrested the owner of a pharmaceutical company in Rani Bagh, Delhi, for selling falsified remdesivir injections (report ID 1022987). Approximately 400 remdesivir vials were seized and were expected to be sold for Rs 20 lakh (approximately 27,000 USD) in the black market. Note that the article did not include the name of the pharmaceutical company allegedly involved.

#### Gujarat state

Surat Police detained a man who allegedly sold six falsified remdesivir vials, six vials for Rs 42,000 (approximately 570 USD), to a person whose relative was admitted to a hospital at Yoqi Chowk (report ID 1032835).

The Ahmedabad Police's Detection of Crime Branch arrested seven individuals and seized 133 vials of falsified remdesivir injections (report ID 1041604). The suspects were selling the remdesivir injections for Rs 12,000 (approximately 160 USD) per vial but they contained Piperacillin and Tazobactam rather than remdesivir and were found in fake 'Hetero' and 'Jubliant' primary packaging; two large pharmaceutical companies in India that produce remdesivir. The manufacturing of the falsified remdesivir was allegedly conducted by Maheshwari Pharmaceutical and Surgical company.

#### Haryana state

An individual allegedly sold over 650 remdesivir vials on the black market (report ID 1045813). The labels on the vials were suspected to be falsified, but the nature and quality of API was yet to be determined.

# Karnataka state

Bengaluru Crime Branch seized 5 vials of falsified remdesivir and apprehended a pharmaceutical company executive allegedly trying to sell the vials for Rs 14,500 (approximately 200 USD) per vial (report ID 1028445).

In Mysuru, police discovered a racket selling falsified remdesivir (report ID 1027311).

They arrested a nurse who had allegedly sold over 800-900 falsified remdesivir vials with the help of two medical representatives. The nurse allegedly filled used, empty vials with cheap antibiotics or saline solution.

#### Madhya Pradesh

Ratlam police arrested seven persons, including a nurse, for allegedly selling falsified remdesivir vials (report ID 1038869). Used empty vials were filled with Monocef salt, and Ceftriaxone injection powder and the packaging was provided by the nurse.

#### Maharasthra state

In Baramati, rural police arrested four persons for selling falsified remdesivir vials, three of which were filled with paracetamol in liquid form, for Rs 35,000 (approximately 470 USD) per vial (report ID 1025236).

One article reports falsified remdesivir sold on online communication platforms for Rs 18,000 (approximately 240 USD) for six bottles (report ID 1030140). The vials were delivered to a patient's home in Mumbai, but rather than remdesivir, a powder was found in the vials. The nature of the powder in the vials was not stated in the article. In another incident in Maharashtra state, two X-Ray technicians were arrested for selling falsified remdesivir vials filled with water for Rs 28,000 (approximately 380 USD) to someone whose relative was admitted to a COVID-19 facility (report ID 1031973).

In an incident in Beed city, three people were arrested for allegedly selling falsified remdesivir vials, which contained nothing but saline water for Rs 22,000 (approximately 300 USD) per vial (report ID 1066963). One of the detainees worked as a pharmacist at a city-based hospital, who filled previously-used vials of remdevisir with the saline water.

#### Telangana state

In Nizamabad, two people were arrested for selling falsified remdesivir vials filled with saline water for Rs 35,000 to Rs 40,000 per vial (report ID 1041847).

#### Uttar Pradesh state

The Uttar Pradesh government seized 25,000 vials of remdesivir in Ahmedabad (report ID 1033631). The packaging on the vials had mistakes in the spelling for example 'prescribin' (instead of a prescription), 'introvenous' (instead of intravenous) and 'preservactica' (instead of preservative). Remdesivir is misspelt as 'Redmdesivir'. The article does not specify the quantity of the falsified products nor whether the active ingredient was present.

#### Uttarakhand state

The Delhi Police arrested five people and discovered a 'pharmaceutical' unit located at in Kotdwar, Uttarakhand state (report ID 1041873). The unit was manufacturing large quantities of falsified remdesivir injections and the accused have already sold 2,000 falsified vials for Rs 25,000 (approximately 340 USD) per vial. During the raid 196 fake remdesivir injections and 3,000 empty vials were seized.

# 6.7.1.2 Diversion and black-market sale of COVID-19 medicines

## Maharastra & Uttar Pradesh state

The Mumbai Police Crime Branch arrested two people after confiscation of 284 remdesivir injections allegedly meant for illegal sale for a price of Rs 5,000-6,000 (approximately 70-80 USD) (report ID 1052017). Initially the police caught a person illegally carrying twelve remdesivir vials. This incident let to the seize of more than 272 remdesivir injections from a pharmacy in Mumbai.

Another article reports on another incident in which the Mumbai Police Crime branch seized 34 vials of remdesivir and arrested five people for selling the drug for Rs 20,000- 25,000 (approximately 270-340 USD) per vial (report ID 1038668). The same article reports on the arrest of eight persons in Meerut, Uttar Pradesh state, for illegally selling remdesivir for up to Rs 30,000 (approximately 400 USD) per vial.

#### Gujarat state

Ahmedabad police seized 24 vials of diverted remdesivir and arrested three individuals after a raid in a shop in the Bapunagar area (report ID 1041435)<sup>22</sup>. One suspect worked as 'plant operator' at Zydus Biotech Park, that is manufacturing remdesivir. He allegedly sold the remdesivir to an intermediary who sold it to the third suspect who was selling the remdesivir to relatives of COVID-19 patients.

#### Tamil Nadu Police

The Tamil Nadu Police arrested three individuals, including a doctor, involved in the black marketing of remdesivir (report ID 1058645). The doctor was caught carrying 17 vials of remdesivir which he bought for Rs 8,000 (approximately 100 USD) per vial and then tried to sell each vial for Rs 20,000 (approximately 270 USD).

#### 6.7.2 May

In May we recorded almost double the number of incidents with COVID-19 medicines compared to April. As for April the vast majority of articles report on incidents with remdesivir. All the reported incidents with COVID-19 medicines were in India.

# 6.7.2.1 Falsified amphotericin B

Mucormycosis or "black fungus" is an important secondary infection in COVID-19 patients, treated with amphotericin B. In April, only one incident was reported with amphotericin B. In May, three articles reported issues with amphotericin B in India. An article reported that in Ahmedabad, Gujarat state, five people were arrested for trying to sell black market amphotericin B (report ID 1068983). Officials of the Food and Drug Control Administration (FDCA) and Gujarat police arrested the five accused from different parts of the city, with eight vials of amphotericin B, worth Rs 2,518 (approximately 30 USD). The accused sold a vial of the drug worth Rs 314 (approximately 4 USD), for Rs 10,000 (approximately 130 USD). Since the injections did not have any labels, officials believe that they were falsified and the vials were

<sup>&</sup>lt;sup>22</sup> The same article reports on another incident that was already discussed above when discussing report ID 1041604.

sent to a laboratory to ascertain the contents.

Another article reported that two 'medicine shop' owners in Allahabad, Uttar Pradesh state, were arrested for selling falsified Liposomal amphotericin B injections (report ID 1084089). In addition, in Kanpur, Uttar Pradesh state, two people were arrested with 68 vials of falsified liposomal amphotericin B supplied to Kanpur hospitals at an exorbitant price of Rs 11,000 (approximately 150 USD) per vial (report ID 1077712).

# 6.7.2.2 Falsified favipiravir

One of the articles published in May highlights that the demand for Favipiravir had increased four times in the state of Gujarat during the April-May pandemic surge and therefore the product should be considered as target for falsification (report ID 1082548). The article reports on the so called first bust of a favipiravir racket: the Food and Drugs Control Administration (FDCA) found the company owner of 'Max Relief Healthcare' based in Gwalior sold 5,850 falsified favipiravir tablets to seven pharma outlets as 'Favimax-400' and 'Favimax-200' through a website for online sales.

#### 6.7.2.3 Falsified remdesivir

In several parts of India falsified remdesivir has been circulating under a new name called 'Covipri' (report ID 1044723). The packaging of the falsified medicine appears legitimate, but does not resemble Covifor (a genuine brand of remdesivir), with a unique design and a "*Make in India*" logo on the back. The manufacturer's suggested retail price is of Rs 5,400 (approximately 70 USD), which is the same price as Hetero Labs pricing of Covifor. There are several spelling errors and grammatical mistakes on the packaging and the manufacturer is listed as Pristine Life Sciences, which is not one of seven authorised remdesivir manufacturers in India.

#### Delhi, India's capital territory

Two people in Delhi were arrested for allegedly selling falsified remdesivir injections at exorbitant prices (report ID 1044625). Seventeen remdesivir injections were recovered from their possession, which were obtained from a resident of Noida. The accused were selling these injections at a price of Rs 35,000 (approximately 470 USD) per vial.

A dialysis staffer at a hospital in New Delhi was arrested for selling falsified remdesivir injections for Rs 30,000 (approximately 400 USD; report ID 1052184). The Delhi Police Crime Branch busted an interstate gang that was manufacturing falsified remdesivir and held seven persons in connection with this case (report ID 1066627). Their manufacturing unit was in Uttarakhand and 198 vials of falsified remdesivir, packaging material, and 3,000 empty vials were recovered.

# Gujarat state

The Gujarat police seized a major remdesivir manufacturing racket and arrested seven people (report ID 1044188). Police seized over 60,000 empty vials, 30,000 falsified labels and over Rs 90 lakh (approximately 121,000 USD) cash, suspected from selling the falsified injections over ten to fifteen days. The police also registered 23 First Information Reports (FIRs) in the previous month and 57 persons were arrested for black marketing in Gujarat state. These cases have revealed that one injection, which normally costs Rs 899 (approximately 12 USD), is sold for up to Rs

30,000 (approximately 400 USD) on the black market.

Another article reported a seizure of 273,000 falsified remdesivir injections in Gujarat state (report ID 1045885). No further details were shared, except that the state authorities are looking into the case and will take action against this falsification racket.

Furthermore, an article at the end of May, completed the reporting of incidents in Gujarat state by summarizing that the police reported 42 cases against 131 accused in the past two to four months relating to the black-marketing, hoarding and sale of falsified remdesivir (report ID 1076472). According to the article most cases were registered in Ahmedabad city (15), Surat city (7) and Rajkot (3).

# Haryana state

As many as 621 falsified remdesivir vials were found dumped in the Bhakra canal (report ID 1050572). The vials were packed in cartons and bore the manufacturer's address in Telangana. Besides remdesivir, 1,456 vials of Cefoperazone were also found in the canal. The Cefoperazone vials were labelled with "For government supply, not for sale" and bore the manufacturer's address in Himachal Pradesh. The labels on vials did not match with those of original vials of the same company. In addition, 849 unlabelled vials were recovered.

In Chandigarh, Haryana Police and drug control authorities of Haryana and Himachal Pradesh state, have sealed a 'pharmaceutical unit' which was allegedly manufacturing large quantities of falsified remdesivir (report ID 1073890). An FIR was registered after the police seized 24 remdesivir vials from the possession of four accused.

#### Karnataka state

The Karnataka police arrested several people for black-marketing remdesivir (report ID 1062671). The article reported that there had been at least one arrest a day for a fortnight relating to this issue. It also reported that some arrests were related to the sale of falsified remdesivir vials.

#### Madhya Pradesh state

In Indore, a congress member, a homeopathic doctor, and two others were arrested for the sale of falsified remdesivir injections in Madhya Pradesh (report ID 1061323). Officials seized 437 of the 700 falsified remdesivir injections that were allegedly smuggled from Gujarat to Indore.

An article reported that an inter-state gang supplied at least 1,200 falsified remdesivir injections, which contained glucose water and salt, in Madhya Pradesh (report ID 1053371). The Gujarat Police arrested six persons from this gang. The racket sold around 1,200 falsified injections: 200 were sent to adjoining Dewas District from Indore, while 500 others were delivered to one Sapan Jain in Jabalpur for Rs 35,000 to Rs 40,000 (approximately 470 - 530 USD) per injection. Another article reported that the Madhya Pradesh police suspects that 85% of the remdesivir injections recovered from people accused of black-marketing during the second wave of COVID-19 were falsified (report ID 1066516). In total they arrested 57 accused in 21 cases and recovered from their possession 473 remdesivir injections. Among them, 400 vials were suspected to be falsified. The suspected

vials were possibly made by a Gujarat-based inter-state gang using salt and glucose. Furthermore, the police arrested the director of the Jabalpur city hospital and 2 other persons for selling fake remdesivir (report ID 1092131). The director had bought 500 falsified remdesivir vials in the city of Indore and used it in the hospital to treat COVID-19 patients.

#### Maharashtra state

In Mumbai, Maharashtra's cyber police registered an FIR in connection with falsified remdesivir and tocilizumab tablets, labelled as made by a reputed pharmaceutical company, being sold online (report ID 1059047). The article reports that many patients received water and falsified medicines in the bottles with the complainant company's name and logo on the vials. However, the article did not specify the name of the pharmaceutical company of which medicinal products were being illegally replicated.

The FDA of Maharashtra state, has found fake branded samples of remdesivir injections: Covifor and Desrem (report ID 1077726). The brands were labelled as manufactured by Hetero Pharmaceuticals and Mylan Pharmaceuticals, respectively. The Covifor sample did not pass the chemical identification test for the presence of remdesivir. There are two chemical analytical reports for Desrem. One sample report concluded that the content of remdesivir in the sample received was less than 2.17% of the labelled amount of remdesivir. While the other sample report concluded that the sample did not pass the identification test for the presence of remdesivir.

# Tamil Nadu state

Another article reported that a private hospital in Tindivanam was caught administering falsified remdesivir, which allegedly resulted in a patient's death (report ID 1065122). The hospital was fined and its license to treat COVID-19 patients was invalidated.

#### Telangana state

Reports highlight falsified remdesivir vials reaching private hospitals in Dammaiguda. (report ID 1050679). The falsified vials were filled with distilled water or saline water and sold for up to Rs 30,000 (approximately 400 USD) per vial.

The police arrested a doctor and two other persons for allegedly administering falsified remdesivir injection to a COVID-19 patient (report ID 1066430). Only after the death of the patient, did the alleged use of falsified remdesivir became apparent. Fifteen falsified remdesivir injections, cash and an oxygen concentrator were recovered by the police.

#### Uttar Pradesh state

In April, an individual from Haryana was arrested for black marketing of falsified remdesivir injections (report ID 1070852). A Kanpur Police Commissioner stated that the accused was arrested along with two medical representatives. During the arrest, some remdesivir injections were seized that were later found to be falsified. An article reports the arrest of seven people for selling vials of injections used in pneumonia treatment packaged as remdesivir (report ID 1052638). The accused sold a vial between Rs 40,000 - 45,000 (approximately 500-600 USD) when,

depending on the manufacturer, it normally does not cost more than Rs 3,500. Nine vials of genuine and 140 vials of falsified remdesivir injections and Rs 2.45 lakh cash (approximately 3300 USD), were recovered from the accused.

In Baghpat District, a joint team of crime branch and FDA officials seized 60 vials of suspected falsified remdesivir and arrested three persons (report ID 1078649). The accused sold each vial between Rs 25,000-30,000 (approximately 330 - 400 USD). Laboratory analysis confirmed that the vials were falsified.

### 6.7.2.4 Sale of remdesivir on the black market.

#### Andhra Pradesh state

In Krishna, the Commissioner's Task Force arrested two people involved in a remdesivir hoarding and black marketing racket (report ID 1071414). Six vials were recovered which were procured by submitting fake doctor prescriptions to the authorities, then selling each vial for Rs 30,000 (approximately 400 USD).

### Delhi, India's capital territory

The Delhi Police caught a gang of four people for black marketing of remdesivir injections; they seized seven injections (report ID 1047797). Allegedly, one of the gang members was a nurse who bought the remdesivir doses in the hospital where she works. The other gang members allegedly subsequently sold them for Rs 70,000 for one dose (approximately 940 USD).

### Haryana state

Haryana police registered 21 FIRs in connection with black marketing of remdesivir injections, oxygen and oxygen cylinders leading to the arrest of 45 persons and recovery of 101 vials of remdesivir and 77 oxygen cylinders (report ID 1048893).

#### Karnataka state

One article reports on an individual who was arrested by the Bengaluru police for selling five vials of remdesivir at Rs 7,000 (approximately 90 USD) per vial (report ID 1067864). The articles reports further that multiple cases have been registered of black market sale of remdesivir and amphotericin B, together with oxygen cylinders and concentrators.

Another article reports that the police in Bengaluru arrested four people, including two doctors, working with a Primary Health Centre, for black marketing remdesivir for Rs 25,000 (approximately 330 USD) per vial (report ID 1068658). The police recovered 11 vials of 100mg/20mL remdesivir from their possession.

### Madhya Pradesh state

In Indore, the police arrested a man, who worked as a driver for the District Health Officer, for attempting to sell remdesivir vials for Rs 15,000 each (approximately 200 USD) (report ID 1066727).

Five people were arrested for being involved in the black marketing of remdesivir injections (report ID 1066447). Three people were arrested by the Khargone police which lead to the arrest of 2 people by the Indore police, who were operation theatre technicians at a hospital in Indore. In total twelve remdesivir vials were seized which the accused were planning to sell to patients for Rs 30,000 (approximately 400 USD) per vial.

#### Tamil Nadu State

Three men were arrested for illegally selling remdesivir smuggled from Bangladesh (report ID 1062448). Two of the accused owned pharmacies, and the third person worked in a pharmacy. The trio were selling remdesivir for Rs 25,000 (approximately 340 USD) a vial. Two vials were seized and will be analysed for authenticity. The police also seized Rs 89,000 cash (approximately 1200 USD) which they had allegedly gained from selling vials.

The police arrested a doctor and a pharmacist for attempting to sell remdesivir on the black market and seized five vials of remdesivir (report ID 1086409). Investigations revealed that the duo had planned to sell the vials in the black market at the rate of Rs 19,000 (approximately 250 USD) a vial.

### Telangana state

One of the articles reported two incidents of black marketing of remdesivir (report ID 1063566). The first incident is of an engineering graduate from Andhra Pradesh who was arrested by the Cyberabad police for illegally selling remdesivir. He received the injections for Rs 3,490 (approximately 45 USD), but was trying to sell them for Rs 28,000 (approximately 370 USD) each. The second incident related to an individual who was arrested for selling remdesivir injections on the black market. The Hyderabad Task Force apprehended him in Secunderabad, and confiscated four remdesivir vials. He bought each vial for about Rs 4,000 (approximately 50 USD) and sold them for nearly Rs 35,000 (approximately 470 USD).

#### 6.7.2.5 Other articles on remdesivir and/or tocilizumab on the black market

The Delhi Police arrested three people, including staffers of a hospital in Faridabad, for black marketing of tocilizumab injection and seized three vials from the accused (report ID 1053504).

One article described several incidents of remdesivir (6) and tocilizumab (1) on the black market in Tamil Nadu State (report ID 1052806).

The incident with tocilizumab involved a relative of a COVID-19 patient who testified having bought Tocilizumab on the black market in Chennai paying Rs 160,000 Rs for one vial.

The six incidents described on remdesivir were reported as follows:

- The first incident involved a hospital helper of the Government Tiruvannamalai Hospital. He was taking remdesivir vials prescribed for patients that were passed away before they could receive the injection and was selling them on the black market. The suspect has been arrested by the Civil Supplies CID.
- The second incident involved a compounder at a private hospital in Chennai. He was arrested by the Vepery police for stealing remaining remdesivir vials procured for patients who had died or recovered.
- The third incident involved a doctor who was illegally selling remdesivir that he had obtained through a dealer with connections at a manufacturing unit. The Civil Supplies CID arrested the doctor after a trap was laid.
- The fourth incident also came to light after a trap laid by the Civil Supplies CID which involved a doctor who used falsified prescriptions to obtain remdesivir. Allegedly the doctor would obtain remdesivir vials through an intermediary working at

a pharmacy and subsequently sell for Rs 22,000 (approximately 300 USD) a vial.

- A fifth incident involved two persons, a doctor and a hospital assistant, knowingly prescribing remdesivir to patients that did not exist and then selling the remdesivir for between Rs 9,000 and Rs 18,000 (approximately 120-250 USD) a vial. Both individuals were arrested by the Integral Coach Factory police. The article also reports several incidents of Tocilizumab being sold on the black market.
- In the sixth incident it was reported that the Chennai city police arrested a doctor and an assistant pharmacist from the King's Institute in Guindy. Together they allegedly stole a few batches of vials that had arrived at the institute and sold them at Rs 5,000 a vial. Allegedly over eight similar incidents were recorded and the police seized over 70 remdesivir vials from different suspects, most of them being doctors or staff associated with hospitals.

## 6.8 Ventilation & oxygenation equipment and consumables

In April and May, 11 articles were found reporting on the illegal sale and theft of substandard and falsified ventilation equipment and consumables.

### 6.8.1 April

In April, three articles reported the black market sale of oxygen cylinders and flow meters in India. In Haryana state, the Gurgaon Police arrested four people for allegedly selling oxygen cylinders in the black market (report ID 1034035). The four accused were reported as selling cylinders worth Rs12,000-14,000 (approximately 160-190 USD) at a cost of Rs 90,000 (approximately 1,200 USD).

In Hyderabad state, three people were arrested for illegally transporting and selling on the black market oxygen cylinders (report ID 1038476). The cylinders were bought at a cost of Rs 16,000 each (approximately 200 USD) and then sold again for Rs 25,000 (approximately 340 USD). The police seized 5 oxygen cylinders, a minivan and cell phones from the accused.

One article reported two incidents (report ID 1041792); the first incident involved two men who were held for allegedly selling oxygen cylinders in Noida, Uttar Pradesh state on the black market. Four oxygen cylinders were seized from their possession along with a refilling pipe and some cash. In the second incident it was reported that a man was arrested for allegedly selling falsified flow meters, which are used to regulate the flow of oxygen from cylinders to patients. Three falsified oxygen flow meters, 18 oxygen regulators, and 12 regulators caps were seized from his possession.

An article reported on a case of fire extinguishers being sold as oxygen cylinders in Delhi, India (report ID 1080042)<sup>23</sup>. The relative of a COVID-19 patient had bought a red coloured cylinder. When the patients' family went to fill the cylinder with oxygen,

<sup>23</sup> Shiv S. Two in Delhi arrested for selling fire extinguishers as oxygen cylinders | Latest News Delhi - Hindustan Times. Hindustan Times - Delhi News. Published online April 30, 2021. Accessed July 28, 2021. https://www.hindustantimes.com/cities/delhi-news/two-in-delhi-arrested-for-selling-fire-extinguishers-as-oxygen-cylinders-101619734417980.html

they realised that they had bought a fake oxygen cylinder. Two people were arrested for selling fire extinguishers as oxygen cylinders and four fire extinguishers were seized.

### 6.8.2 May

In May, the US Justice Department arrested two men who stole a tractor trailer carrying 192 ventilators, worth 3 million USD, from a lot at Miami International Airport in August 2020 (report ID 1080975). All other articles related to ventilation equipment in the MQM Globe for the month of May report on incidents in India.

Two articles report on events in Uttar Pradesh state. The Lucknow police arrested 10 persons involved in black marketing of oxygen cylinders (report ID 1047953). The police recovered 225 oxygen cylinders and cash. The Uttar Pradesh Special Task Force arrested two people for selling oxygen cylinders on the black market (report ID 1066368). Two people were arrested with 40 oxygen cylinders and a vehicle used to transport them. The accused used fake demand letters and got the cylinders refilled with oxygen.

Two articles report on events in Haryana state. The police registered 21 first information reports in connection with the sale of oxygen, oxygen cylinders, and remdesivir across Haryana on the black market, leading to the arrest of 45 persons and recovery of 77 oxygen cylinders and 101 vials of remdesivir (report ID 1048893).

A Congress member was arrested in Faridabad, Haryana state, for his alleged involvement in black marketing of oxygen cylinders (report ID 1061323). The police found 50 oxygen cylinders hidden in the suspects' car (42 empty and 8 filled cylinders).

Furthermore, multiple cases were registered across Bengaluru, Karnataka state, where cyber criminals sold oxygen cylinders, concentrators, and remdesivir among other essential drugs on the black market (report ID 1067864).

The police also caught 3-4 people from Jabalpur, Madhya Pradesh state, who sold oxygen cylinders for Rs 20,000 (approximately 300 USD) per cylinder (report ID 1092131). In Indore, Madhya Pradesh state, 30L oxygen cylinders were sold for almost Rs 60,000 (approximately 800 USD); almost three times the normal cost (report ID 1092783). That same article reported that in New Delhi, police raided a building and seized over 400 oxygen concentrators in May.

Indian companies trying to buy medical products in China have stated that prices are on the rise and that the quality of the products is going down simultaneously (report ID 1060109). Allegedly, there were no quality checks on Chinese oxygen concentrators. The article also reported that assembling factories were using non-medical grade components in the oxygen generators, rendering them substandard.

In Delhi two very severe SF incidents with oxygen concentrators and oxygen cylinders came to light. One article reported on substandard oxygen concentrators being sold at exorbitant prices (report ID 1059143). The police seized 524 oxygen concentrators and sent two different models for testing to the Shriram Institute for

Industrial Research. The article quotes a police officer saying: "The report found that an average output of oxygen purity is found to be 32.7% and 38.2% respectively in a 9-litre and 7-litre model. The testing was carried out in the laboratory room air and the oxygen concentration was found to be only merely 20.8%". The police said that the oxygen concentrators were purchased for Rs 12,500 and Rs 20,669 (approximately 170 USD and 280 USD) and sold for Rs 70,000 (approximately 940 USD) per piece.

The second article reported on three people being arrested for selling fire extinguishers sold as oxygen cylinders (report ID 1050037)<sup>24</sup>. During the police raid, the racketeers was caught red handed while painting discarded fire extinguishers as black oxygen cylinders. The police recovered more than 530 fire extinguishers, over 25 oxygen gas cylinder nozzles and tools that the accused used to turn discarded iron gas cylinders into fake oxygen cylinders including grinders used for removing paint from the cylinders and spray-paint cans.

### **Annexes**

## Annex A: Methodology changes for searches in the lay literature.

In section 6 'Lay literature', we report on incidents that were reported in the lay press. In section 6.1 we briefly describe the methodology we apply to collect the lay press articles. Changes in methodology since the first 'Medical Product Quality Report – Covid-19 issues' are listed below.<sup>25</sup>

#### Since the October 2020 issue

- Personal protective equipment (PPE), and sanitisers and disinfectants: alerts from January to September 2020 in the PPE category included sanitisers and disinfectants. From October 2020 onwards, we created two distinct categories: sanitizers/disinfectants and other PPE.
- Key terms used to generate the Globe-reports: key terms applied to search the Globe database to compile the Globe-reports were revised in October & November 2020. Therefore caution is required when interpreting the number of alerts or articles over time.

#### Since the November 2020 issue

COVID-19 medicines:

Non-COVID-19 medicines, containing hidden API(s) that are used or trialled for COVID-19 are no longer included in the COVID-19 reports (e.g. hidden sildenafil in sexual enhancement supplements). Only medicines for which the stated API is used or trialled for COVID-19 are included in the COVID-19 report (e.g. falsified 'Viagra'). The observed decrease of the number of articles/alerts over time may at least partially be due to this change.

### Since the January 2021 issue

- COVID-19 vaccines:
  - Search terms used for Google News scraping:
     It is highly likely that diverted vaccines will not be stored appropriately and their use is likely to result in people being unprotected when they think they are. To ensure that the system includes articles that are related to diversion and theft of COVID-19 vaccines from legitimate supply chains, we adapted the search terms for Google News searches linked to COVID-19 vaccines.
  - Inclusion of reports: scams and fraudulent claims are included in the report if involving the direct offer of a COVID-19 vaccine. For all the other product categories, our reporting policy remains the same, and we do not aim to include discussion of fraudulent claims of efficacy.

<sup>&</sup>lt;sup>25</sup>Infectious Diseases Data Observatory. Medical Product Quality Reports. Medical Product Quality Reports. Published 2020. Accessed March 2, 2021. https://www.iddo.org/mg/research/medical-product-quality-reports

Ventilation equipment: We include incidents related to ventilation equipment in the overall article count. In the first Medical Product Quality Report, we reported on two incidents with ventilators (one in May and one in June 2020) but they were not included into the overall count in subsequent reports. From the January 2021 issue onwards the figures for ventilation equipment are included, including those incidents in May and June 2020).

#### Since the March 2021 issue

- PPE: 'face shield' was added to the key terms applied to search the Globe database to compile the PPE Globe-report. Therefore caution is required when interpreting the number of alerts or articles over time.
- COVID-19 medicines: 
  'Amphotericin' was added to the key terms applied to search the Globe database to compile the COVID-19 medicine Globe-report. Although the product is not used as direct treatment for COVID-19 it has been included in the search terms. Amphotericin is used to treat mucormycotic, a fungal infection increasingly reported in patient that previously suffered from COVID-19. Adding Amphotericin to the search terms does not generate bias in the previous reports since the Globe database did not hold any incidents with amphotericin from 1ste of January 2020 to 31st of March 2021.

## Annex B: Alerts on COVID-19 related diverted, substandard or falsified medical products by week

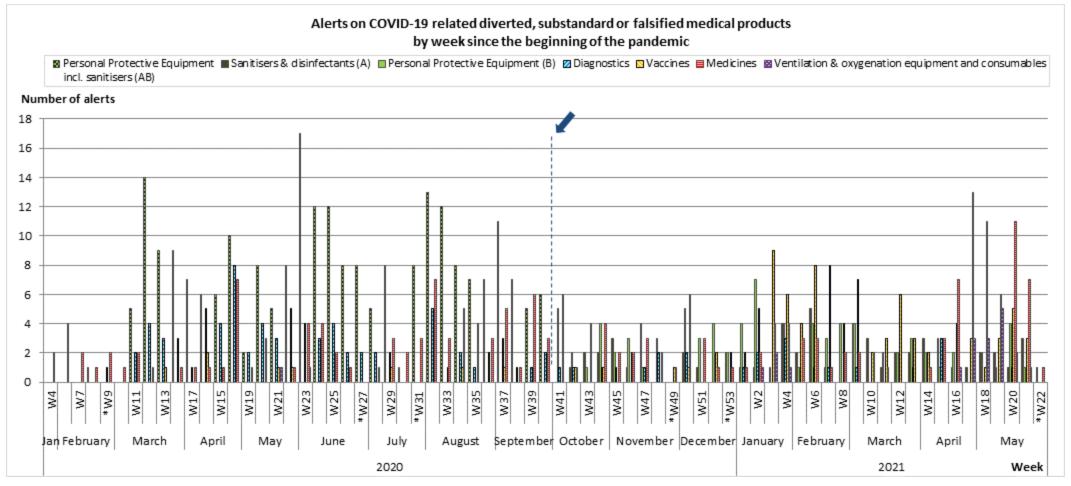

Figure 6. Number of alerts on the Medicines Quality Monitoring Globe by category and by week since the beginning of the pandemic.

ALERTS ARE FOR SUBSTANDARD OR FALSIFIED PRODUCTS LINKED TO COVID-19. THE FIGURE STARTS IN WEEK 4, MONDAY 20<sup>TH</sup> OF JANUARY, 2020 AND ENDS ON WEEK 13, MONDAY 31ST OF MAY, 2021. WEEKS WITH AN ASTERISK (\*) ARE OVERLAPPING 2 MONTHS, EACH TIME THE WEEK IS ATTRIBUTED TO THE EARLIEST MONTH. AS SOME ARTICLES DESCRIBE MORE THAN ONE CATEGORY OF PRODUCTS, THE SUM OF ALERTS PER MONTH MAY EXCEED THE SUM OF ARTICLES PER MONTH REPORTED IN FIGURE 2. THE ARROW INDICATES THE END OF SEPTEMBER WHEN THE CATEGORY OF "PERSONAL PROTECTIVE EQUIPMENT INCL. SANITISERS" WAS SPLIT IN TWO DISTINCT CATEGORIES: (A) SANITISERS AND DISINFECTANTS, AND (B) PERSONAL PROTECTIVE EQUIPMENT.

Note (1). Since November, non-COVID-19 medicines containing hidden API(s) that is/are used or trialled for COVID-19 are no longer included in the COVID-19 reports. Only medicines for which the stated API is used or trialled for COVID-19 treatment are included in the COVID-19 report. The observed decrease of the number of articles on medicines can be at least partially due to this change.

NOTE (2). SEARCH TERMS FOR COVID-19 VACCINES THEFTS AND DIVERSION HAVE BEEN ADDED, THE OBSERVED RISE IN THE NUMBER OF ARTICLES FROM JANUARY '21 CAN BE AT LEAST PARTIALLY DUE TO THIS CHANGE

# **Annex C: Medicine Quality Monitoring Globe reports containing report IDs**

Annex B contains the reports generated by the Medicine Quality Monitoring Globe (MQM Globe) using pre-defined search terms for each of the product categories. The report IDs (six or seven digit code) discussed in section 6 'Lay literature' are detailed in the MQM Globe reports in this annex or they are available on the online MQM Globe<sup>26</sup>, introducing "reportID:XXXXXXX" in the search box.

Notes: Quality-control managers at a plant in Baltimore, Maryland, operated by Emergent BioSolutions, are now required to test every batch of Johnson & Johnson vaccines produced alongside 15million doses of AstraZeneca vaccines destroyed after their ingredients were mixed up. That amounts to screening 62million doses for possible contamination, The New York Times reported on Tuesday based on documents and interviews with former workers at the factory

and federal officials. Workers at the factory in February unknowingly cross-contaminated about 15million doses of the Johnson & Johnson jab with AstraZeneca doses, rendering them unusable. The error was caught before the doses were distributed.  $[\ldots]$

Notes: Chilakalapudi police on Monday registered a case against three ANMs of Narayanapuram urban health centre after 40 doses of COVID-19 vaccine went missing.

Based on a complaint lodged by the duty doctor, Chilakapudi police registered a case on the charges of theft.

According to police, the duty doctor of Narayanapuram urban health centre, during an audit, noticed a shortage of 40 doses of Covishield vaccine.

When she brought it to the notice of another doctor and three ANMs and other staff, they reportedly gave evasive answers. Officials suspect that the doses were stolen while it was transported from the cold storage to the vaccine centre.

1068982	Three doctors arrested in Bengaluru for selling illegal vaccines, Remedisvir drug and fake negative Covid-19 reports	Link

Notes: Police in Bengaluru arrested two women on May 20 including a 25-year-old contract doctor working with the Bruhat Bengaluru Mahanagara Palike (BBMP) for allegedly black marketing COVID-19 vaccines. According to media reports, the accused are Dr Pushpita who was attached with the Manjunathanagar Primary Health Centre (PHC) and her relative Prema, a resident of ITI Layout. Sanjeev Patil, Deputy Commissioner of Police (West), said that the vaccines, which were meant for the public and were to be administered for free, were kept at Prema's residence. Police said that they were being administered at Rs 500 per dose to private beneficiaries there daily post 4 pm from April 23, according to The Times of India.

The duo was caught red handed after police received a tip off and posed as a beneficiary. The same day, police had arrested four persons, including two doctors working with a Primary Health Centre (PHC), for allegedly running a racket of issuing fake COVID-19 certificates and black marketing antiviral drug Remdesivir. According to the police, two of the accused persons have been identified as Dr B Shekhar (25) and Prajwala, who worked as medical officer and doctor, respectively, at the PHC in Chamarajpet in the city. Notes: Amidst a shortage of covid supplies and oxygen, 2,73,000 fake remdesvir injections were ceased in Gujarat. The nation is grappling with a shortage of oxygen and injections, and this report has shocked the country. More details are yet to be uncovered by the state authorities, strict action will be taken against those involved in the racket. Last month, a similar misplacement of the vaccine stock was reported by the Maharashtra government. The CBI and state officials looked into the same to trace the package. Similar action will be taken here, with severe punishment for the people involved.

Notes: A sharp-eyed worker at a Massachusetts hospital is being credited with spotting a

shipment of tens of thousands of counterfeit N95 surgical masks that could have potentially put the health of frontline medical workers at risk, officials said Monday.

Masks and other protective equipment have been in high demand during the coronavirus pandemic, leading to shortages of many products.

James "Barry" O'Shaughnessy, the manager of procurement of South Shore Health in Weymouth with 25 years of experience, recently placed an order for 30,000 masks — but when they arrived, he noticed something was awry.

"The labels on the boxes were placed differently than other shipments," O'Shaughnessy said in a statement. "And the plastic bag inside the boxes had a strange seal. My gut told me something was off." He asked a 3M representative to help inspect the third-party masks that were not from a 3M-authorized distributor. "I sent 20-30 photos of the product to 3M and the representative confirmed my suspicion. The masks were counterfeit," he said. The Department of Homeland Security seized the masks and is investigating.

South-Eastern Asia	Indonesia	Republic of Indonesia	-5	120

Notes: The Health Ministry says it is working closely with law enforcement to crack down on the reported spread of fake medical masks in Indonesia.

Local news outlets recently reported their discovery of fake medical grade-labeled face masks being openly sold online and at physical stores.

These encompass surgical masks and N95/KN95 masks — which are recommended for their small particles filtration capabilities — the counterfeit versions of which do not fulfill the ministry's standards, as product tests have shown. [...]

Europe	United Kingdom	Portsmouth	50.79899	-1.09125
Europe	United Kingdom	London	51.50853	-0.12574

Notes: There's a thriving black market in Covid-19 test kits being sold via social media sites. Anyone can now apply for a pack of seven tests free from the NHS, but that doesn't seem to have dented the secondary market for kits being sold in bulk.

"The sale of these devices for personal gain and profit is not just reprehensible, it is illegal," said a Department of Health and Social Care spokesman. [...] Among the sellers I found was Vishal Shah of Portsmouth, offering a box of 25 Innova tests for £150 on Facebook. [...] Another seller, using the name Gemma White, was selling the Innova box for £100, down from £120. [...] Another elusive Facebook seller used the name Susan Green and had an Innova box up for grabs for £90. Her recently set-up Facebook account displays zero personal information apart from revealing that she's from Southend-on-Sea in Essex, and the profile picture shows a dog. [...] Rajul Patel, from London, said he was a member of a group called PPE UK and would sell boxes of 25 tests at just £37.50.

I asked how he could sell them so cheaply and he replied: "I'm in the wholesale market with loads of groups, there's always people with stock they want to get rid of, gloves, masks, anything." [...]

Notes: Sun., April 4, 2021, 3:46 a.m. · 1 min read

Health Canada has issued a recall on disposable masks containing a material made of tiny particles it says could pose a danger if inhaled.

The agency is advising people not to wear masks with graphene or biomass graphene because its preliminary assessment of the available research suggests the particles cause early lung toxicity in animals, though the risks to humans are not yet known. [...] It has directed distributors, importers and manufacturers to stop selling the masks and has also advised provinces and territories to halt their use. [...]

Snippet: WARNING LETTER Incredible Products, SA de CV MARCS-CMS 609503 — May 27, 2021 Share Tweet Linkedin Email Print Delivery Method: VIA UPS Product: Drugs Recipient: Recipient Name Diego Lomeli Pelayo Recipient Title Co-Owner Incredible Products, SA de CV Calle Castellanos y Tapia No. 921 Col. Santa Maria 44350 Guadalajara , Jal. Mexico Issuing Office: Center for Drug Evaluation and Research United States Warning Letter 320-21-47 May 27, 2021 Dear Mr. Pelayo: Your firm is registered as a human drug manufacturer. The U.S. Food and Drug Administration (FDA) conducted testing of a consumer antiseptic hand rub drug product (also referred to as consumer hand sanitizer) labeled as GELBACT ANTIBACTERIAL HAND GEL. This drug product is labeled as manufactured by your facility, Incredible Products S.A. de C.V., FEI 3009788529, Calle Castellanos y Tapia No. 921, Col. Santa Maria, Guadalajara, Jalisco 44350 Mexico. Following an attempt to import GEL-BACT ANTIBACTERIAL HAND GEL into the United States, it was detained and refused admission at the border. The results of the FDA laboratory testing of a batch of this product detained at the border demonstrate that this drug product, labeled as manufactured at your facility, is adulterated within the meaning of section 501(d)(2) of the Federal Food, Drug, and Cosmetic Act (FD& C Act or the Act), 21 U.S.C. 351(d)(2), in that a substance was substituted wholly or in part therefor. In addition, this product is adulterated within the meaning of section 501(a)(2)(B) of the FD& C Act (21 U.s.c. 351(a)(2)(B)), in that the substitution demonstrates that the quality assurance within your facility is not functioning in accordance with Current Good Manufacturing Practice (CGMP) requirements. In addition, GELBACT ANTIBACTERIAL HAND GEL is an unapproved new drug introduced or delivered for introduction into interstate commerce in violation of section 505(a) of the FD&C Act, 21 U.S.C. 355(a) and is misbranded under sections 502(j), (a), (e), (x) and (ee) of the FD& C Act, 21 U.S.C. 352(j), (a), (e), (x) and (ee). Introduction or delivery for introduction of such products into interstate commerce is prohibited under sections 301(d) and (a) of the FD&C Act, 21 U.S.C. 331(d) and (a). These violations are described in more detail below. Adulteration Violations GELBACT ANTIBACTERIAL HAND GEL, labeled as manufactured at your facility, is labeled to contain 80% volume/volume (v/v) of the active ingredient

alcohol (ethanol). However, FDA laboratory testing of a batch of this product detained at the border found that this product contained an average of 1.2% ethanol and 67% methanol v/ v. Therefore, this hand sanitizer drug product is adulterated under section 501(d)(2) of the FD& C Act in that the active ingredient, ethanol, was substituted wholly or in part with methanol, a dangerous chemical when in contact with human skin or ingested. Methanol is not an acceptable ingredient for hand sanitizers and should not be used due to its toxic effects. Skin exposure to methanol can cause dermatitis, as well as transdermal absorption with systemic toxicity. Substantial methanol exposure can result in nausea, vomiting, headache, blurred vision, permanent blindness, seizures, coma, permanent damage to the nervous system, or death. Although all persons using these products on their hands are at risk, young children who accidentally ingest these products, and adolescents and adults who drink these products as an alcohol (ethanol) substitute, are most at risk for methanol poisoning. On July 30, 2020, FDA held a teleconference with you and PCGI Wholesale, your registered U.S. agent. We recommended you consider removing all of your firm's hand sanitizer drug products currently in distribution to the U.S. market. On July 30, 2020, FDA notified the public of methanol contamination of your hand sanitizer at the following website: https://www.fda.gov/drugs/ drug-safety-and-availability/fda-updates-hand-sanitizers-consumers-should-not-use On August 6, 2020, you issued a voluntary nationwide recall of GELBACT ANTIBACTERIAL HAND GEL due to potential presence of undeclared methanol (wood alcohol) as noted on the following FDA website: https://www.fda.gov/safety/recalls-market-withdrawals-safety-alerts/incredibleproducts-sa-de-cv-issues-voluntary-nationwide-recall-gelbac-t-antibacterial-handgel In response to this letter, provide the following: • A detailed investigation into how the drug product described above, which was labeled as containing ethanol, was substituted in part or in whole with methanol. • A list of all raw materials used to manufacture all of your hand sanitizer drug products, including the suppliers' names, addresses, and contact information. • A list of all batches of any hand sanitizer drug products shipped to the United States by your firm, and a full reconciliation of all material you distributed. • Copies of the complete batch records for all batches distributed to the U.S. • During a teleconference with the FDA on July 30, 2020, you stated that you rely on the certificate of analysis (COA) of your incoming alcohol raw materials. Discuss the corrective action to remediate this issue in your response. The substitution and contamination with methanol in a drug product labeled as manufactured in your facility demonstrates that the quality assurance within your facility is not functioning in accordance with CGMP requirements under section 501(a)(2)(B) of the FD& C Act. 1 Unapproved New Drug and Misbranding Violation GELBACT ANTIBACTERIAL HAND GEL is a "drug" as defined by section 201(g)(1)(B) of the FD& C Act, 21 U.S.C. 321(g)(1)(B), because it is intended for use in the diagnosis, cure, mitigation, treatment, or prevention of disease, and/or under section 201(g)(1)(C) of the FD& C Act, 21 U.S.C. 321(g)(1)(C), because it is intended to affect the structure or any function of the body. Specifically, this product is intended as a consumer antiseptic hand rub. Examples of claims observed on the GELBACT ANTIBACTERIAL HAND GEL product label that provide evidence of the intended use (as defined in 21 CFR 201.128) of the product include, but may not be limited to, the following: "Drug Facts...Purpose: Antiseptic...USES...Hand sanitizer to help decrease bacteria on the skin." "Directions...Apply the gel on the hands, rub and distribute evenly. Let dry at room temperature." This topical antiseptic product is a "new drug" within the meaning of section 201(p) of the FD& C Act, 21 U.S.C. 321(p), because it is not generally recognized as safe and effective (GRASE) for use under the conditions prescribed, recommended, or suggested in its labeling. New drugs may not be introduced or delivered for introduction into interstate commerce without prior approval from FDA, as described in section 505(a) of the FD&C Act, 21 U.S.C. 355(a), unless they are lawfully marketed under section 505G of the FD&C

Act (which is not the case for this product, as further described below) or other exceptions not applicable here. No FDA-approved application pursuant to section 505 of the FD&C Act, 21 U.S.C. 355, is in effect for this drug product, nor are we aware of any adequate and well-controlled clinical studies in the published literature that support a determination that your GELBACT ANTIBACTERIAL HAND GEL drug product is GRASE for use under the conditions suggested, recommended, or prescribed in its labeling. Accordingly, this product is an unapproved new drug marketed in violation of sections 505(a) and 301(d) of the FD&C Act, 21 U.S.C 355(a) and 331(d). We note that over-the-counter (OTC) topical antiseptic products had been the subject of rulemaking under the Agency's OTC Drug Review. In particular, such products were addressed in a tentative final monograph (TFM) entitled "Topical Antimicrobial Drug Products for Over-the-Counter Human Use; Tentative Final Monograph for Health-Care Antiseptic Drug Products," Proposed Rule, 59 FR 31402 (June 17, 1994) (1994 TFM), as further amended by the "Safety and Effectiveness of Consumer Antiseptics; Topical Antimicrobial Drug Products for Over-the-Counter Human Use; Proposed Amendment of the Tentative Final Monograph; Reopening of Administrative Record," Proposed Rule, 81 FR 42912 (June 30, 2016) (Consumer Antiseptic Rubs Proposed Rule). Over the course of these rulemakings, three active ingredients (benzalkonium chloride, ethyl alcohol (ethanol), and isopropyl alcohol) were classified as Category III for use as consumer antiseptic rub products, meaning that additional safety and effectiveness data are needed to support a determination that a drug product containing one of these active ingredients would be GRASE for use as a consumer antiseptic rub. Section 505G of the FD& C Act addresses nonprescription drugs marketed without an approved application. Under section 505G(a)(3) of the FD& C Act, drugs that were classified as Category III for safety or effectiveness in a TFM that is the most recently applicable proposal or determination for such drug issued under 21 CFR Part 330 and that were not classified as Category II for safety or effectiveness – are not required to have an approved application under section 505 in order to be marketed, as long as they are in conformity with the relevant conditions of use outlined in the applicable TFM, including the active ingredient, and comply with all other applicable requirements. However, GELBACT ANTIBACTERIAL HAND GEL does not conform to the 1994 TFM, as further amended by the 2016 Consumer Antiseptic Rubs Proposed Rule, nor any other TFM, proposed rule, or final rule, and does not meet the conditions under section 505G(a)(3) of the FD& C Act, for marketing without an approved application under section 505. According to the product label, GELBACT ANTIBACTERIAL HAND GEL purportedly contains the active ingredient ethyl alcohol 80%. However, as previously discussed, FDA laboratory analyses of a batch of this product detained at the border demonstrated that GELBACT ANTIBACTERIAL HAND GEL contains ethanol in a concentration that is less than the 80% stated on its product label and less than the amount of ethanol described in the 1994 TFM. 2 Such a product does not conform with the TFM or the applicable requirements, nor is it consistent with the formulations described in the guidances setting forth FDA's temporary policies for hand sanitizers during the COVID-19 public health emergency. 3 FDA laboratory analyses also demonstrated that a batch of GEL-BACT ANTIBACTERIAL HAND GEL contains significant concentrations of the undeclared ingredient methyl alcohol (methanol). Use of methanol as an active ingredient is not in conformance with the 1994 TFM, nor is methanol included in the formulations described in FDA's Temporary Policy for Preparation of Certain Alcohol-Based Hand Sanitizer Products During the Public Health Emergency (COVID-19) Guidance for Industry. Furthermore, methanol is not acceptable as an inactive ingredient in hand sanitizers. As previously discussed, methanol has significant and sometimes fatal toxic effects and, therefore, does not meet the requirements under 21 CFR 330.1(e) that a product's inactive ingredients be safe and suitable. 4 Additionally, this methanol-containing drug product, GELBACT ANTIBACTERIAL HAND GEL,

is misbranded under sections 502(j), (a), (e), (x), and (ee) of the FD& C Act, 21 U.S.C. 352(j), (a), (e), (x), and (ee). It is misbranded under section 502(j) of the FD& C Act, 21 U.S.C. 352(j), because it is dangerous to health when used according to its labeling as a hand sanitizer. As previously stated, skin exposure to methanol could lead to systemic absorption, and substantial methanol exposure can potentially result in, among other things, blindness, permanent nervous system damage, and even death. This hand sanitizer is misbranded under section 502(a) of the FD& C Act, 21 U.S.C 352(a), because its labeling is false or misleading. As noted above, GELBACT ANTIBACTERIAL HAND GEL is labeled to contain ethyl alcohol 80%. However, FDA laboratory analysis of a batch of this product demonstrate that the product contains a concentration of ethyl alcohol (ethanol) that is less than what is stated on the product label and contains a significant concentration of methyl alcohol (methanol), an ingredient that is not declared on the product label. Section 201(n) of the FD&C Act, 21 U.S.C. 321(n), provides that "in determining whether the labeling or advertising is misleading there shall be taken into account . . . not only representations made or suggested . . . but also the extent to which the labeling or advertising fails to reveal facts material in the light of such representations or material with respect to consequences which may result . . ." Thus, the misleading representation of the concentration of the active ingredient ethyl alcohol (ethanol), and the failure of the product label to disclose the presence of the methyl alcohol (methanol) in the product, causes this product to be misbranded under section 502(a) of the FD&C Act, 21 U.S.C. 352(a). The failure of this product to list methyl alcohol (methanol) as an ingredient on its label causes also causes it to be misbranded under section 502(e)(1)(A) of the FD& C Act, 21 U.S.C. 352(e)(1)(A). Furthermore, GELBACT ANTIBACTERIAL HAND GEL is misbranded under section 502(x) of the FD& C Act, 21 U.S.C. 352(x), because the product labels fails to disclose a domestic address or domestic telephone number through which the responsible person may receive a report of a serious adverse event with such drug. Lastly, this product is misbranded under section 502(ee) of the FD& C Act, 21 U.S.C. 352(ee) because GELBACT ANTIBACTERIAL HAND GEL is a nonprescription drug subject to section 505G of the FD& C Act, 21 U.S.C. 355h, but does not comply with the requirements for marketing under that section and is not the subject of an application approved under section 505 of the FD& C Act, 21 U.S.C. 355. The introduction or delivery for introduction of a misbranded drug into interstate commerce is prohibited under section 301(a) of the FD&C Act, 21 U.S.C. 331(a). CGMP Consultant Recommended Based upon the nature of the violations we identified at your firm, we strongly recommend engaging a consultant qualified, as set forth in 21 CFR 211.34, to evaluate your operations and to assist your firm in meeting CGMP requirements if your firm intends to resume manufacturing drugs for the U.S. market. We also recommend that the qualified consultant perform a comprehensive audit of your entire operation for CGMP compliance and that the consultant evaluates the completion and efficacy of your corrective actions and preventive actions before you pursue resolution of your firm's compliance status with FDA. Your use of a consultant does not relieve your firm's obligation to comply with CGMP. Your firm's executive management remains responsible for resolving all deficiencies and systemic flaws to ensure ongoing CGMP compliance. Conclusion The violations cited in this letter are not intended to be an all-inclusive list of violations associated with your drug products. You are responsible for investigating and determining the causes of these violations and for preventing their recurrence or the occurrence of other violations. Note that FDA placed all drugs and drug products manufactured by your firm on Import Alert 66-78 on August 13, 2020, as the methods used in and controls used for the manufacture, processing, packing, or holding of these products do not appear to conform to current good manufacturing practices within the meaning of section 501(a)(2)(B) of the FD& C Act. Drugs and drug products that appear to be adulterated or misbranded may be detained or refused admission without physical

examination. All drugs and drug products manufactured by your firm may remain listed on this import alert until there is evidence establishing that the conditions that gave rise to the appearance of a violation have been resolved, and the Agency has confidence that future entries will be in compliance with the FD& C Act. This may include an inspection prior to the Agency considering the appearance of adulteration to be addressed. If you decide you want to manufacture drugs for the United States in the future, request a Regulatory Meeting to discuss corrective actions. This letter notifies you of our findings and provides you an opportunity to address the above deficiencies. After you receive this letter, respond to this office in writing within 15 working days. Specify what you have done to address any violations and to prevent their recurrence. In response to this letter, you may provide additional information for our consideration as we continue to assess your activities and practices. If you cannot do so within 15 working days, state your reasons for delay and your schedule for completion. Send your electronic reply to CDER-OC-OMQ-Communications@fda.hhs.gov. Please Identify your response with FEI 3011274338 and ATTN: Daniel W. Brisker. Sincerely, /S/ Francis Godwin Director Office of Manufacturing Quality Office of Compliance Center for Drug Evaluation and Research CC: Registered US Agent Gerardo Acevedo PCGI Wholesale pacific coastgbl@hotmail.com 1 Due to an increased demand for

alcohol-based hand sanitizers during the COVID-19 pandemic, FDA published the Guidance for Industry: Temporary Policy for Preparation of Certain Alcohol-Based Hand Sanitizer Products During the Public Health Emergency (COVID-19) on March 19, 2020, and subsequently updated the guidance several times, most recently on February 10, 2021. This guidance communicates the Agency's temporary policy that we do not intend to take action against firms for CGMP violations under section 501(a)(2)(B) of the FD& C Act if such firms prepare alcohol-based hand sanitizers for consumer use (or for use as a health care personnel hand rub) during the public health emergency, provided certain circumstances described in the guidance are present. These circumstances include preparation of hand sanitizer products using only the ingredients and formulas set forth in the guidance. In addition to the violative sample results detailed above that demonstrate the substitution of the hand sanitizer product manufactured at your facility, a review of the purported formulations on the drug product's labeling further indicates that such a product is not prepared consistent with FDA's temporary policy set forth in the guidance. Therefore, this product does not fall within the Agency's temporary policy not to take action against firms manufacturing hand sanitizer products for violations of section 501(a)(2)(B) of the FD& C Act. 2 The 1994 TFM, which does not distinguish between antiseptic hand washes and rubs, proposed for antiseptic handwashes and healthcare personnel handwashes an alcohol concentration of "60 to 95 percent by volume in an aqueous solution denatured according to Bureau of Alcohol, Tobacco and Firearms regulations in 27 CFR part 20." 59 FR at 31442. Later amendments to the 1994 TFM distinguished between antiseptic hand washes and rubs, and between consumer and healthcare personnel antiseptics, but did not change the alcohol concentration originally proposed in 1994. 3 See, e.g., Temporary Policy for Preparation of Certain Alcohol-Based Hand Sanitizer Products During the Public Health Emergency (COVID-19). Because GELBACT ANTIBACTERIAL HAND GEL is not consistent with the formulations in these guidances, it does not fall within any temporary Agency policy not to take action against firms manufacturing hand sanitizer products for violations of section 505 of the FD& C Act. 4 An inactive ingredient used in OTC monograph drugs must meet the requirements of 21 CFR 330.1(e), which requires, among other things, that inactive ingredients must be safe in the amount administered. Notes: [...]Out of 78 samples of items taken and tested for analysis, only two of them turned out to be fakes. He said the vendors selling the fake items were not arrested or sent to court because it was their first offence. The officials just asked them to sign a letter promising not to repeat the offence. [...] Oun said that in 2020, his directorate seized and burned 94 tonnes of fake alcohol sanitiser and that some of the seizures had resulted in individuals being referred to the court for prosecution. [...]

Notes: [...] According to police, the accused were allegedly involved in selling of antibiotics as remdesivir vials by printing fake stickers of Hetero and Jubliant Companies, two pharmaceutical giants in India that produce the crucial drug. The accused were charging Rs 12,000 for each dose, said the police. Police have also seized Rs 21.04 lakh in cash which the accused procured after selling these fake drugs. [...] However upon checking the vials, police found that they did not contain remdesivir drug but Piperacillin and Tazobactam antibiotics in them. [...]

Notes: [...] After black marketing of Remdesivir and oxygen cylinders, a cheating case has been filed in Bengaluru by a family who was siphoned off Rs 7.9 lakh with the promise of Amphotericin B. "The doctors told the family to arrange the drug soon since the hospital doesn't have the Amphotericin B in stock. The family made enquiries with various people regarding the drug, while a man identified as Ashok contacted the patient's wife and promised that he will courier the Amphotericin B once he received Rs 7.9 lakh," said the police. [...]

Notes: According to the FDA, a "drug is removed from the market when its risks outweigh its benefits. A drug is usually taken off the market because of safety issues with the drug that cannot be corrected, such as when it is discovered that the drug can cause serious side effects that were not known at the time of approval." The agency also takes into account the number of people using the drug that is being considered for a recall as to not harm those people. [...]

Notes: [...] What you just read is one of the many ways money is made out of the an unjustifiable demand for Remdesivir and Tocilizumab in the State. Like the virus, the black market for these drugs has had a morbid mutation in the second wave of the pandemic. Greed, it seems,

has become as infectious as the virus itself, with even doctors, hospitals, and hospitals staff jumping on the bandwagon to swindle and exploit helpless patients and their desperate kin. This Sunday, Express tells you how these crimes work in the State. Apart from the modus operandi of Ramesh, four more methods have been identified. [...]

Notes: Two persons were arrested late Thursday with 68 vials of fake black fungus drug — Liposomal Amphotericin B — supplied to Kanpur hospitals at an exorbitant price of Rs 11,000 each. The accused, Gyanesh Kumar Sharma and Prakash Mishra, residents of Naubasta area, were travelling in a black SUV with words 'High Court' embossed on the registration plate, when they were stopped at Chunniganj locality and arrested on a tip-off. Besides, amphotericin injections, Rs 1.8lakh in cash and five mobile phones were seized. Earlier, the Kanpur police had tracked down a huge consignment of fake Remdesivir drug, which is key to treating Covid-19. Police confirmed to TOI late Thursday that NSA will be slapped on the accused. [...]

Notes: In a huge haul, officials of the Drug Control Administration (DCA) busted an inter-State spurious drug racket. They seized the spurious COVID-19 drug stocks, being manufactured for more than a year. [...] The accused were manufacturing the Dewciff-AZ tablets (Cefixime, Azithromycin and Lactic Acid Bacillus tablets), Azidew-250 (Azithromycin tablets), FIXRAT-AZ and four other brands of tablets. The tablets were reportedly manufactured at Kancare Pharmaceuticals Private Limited, Roorke, Haridwar district, Uttarakhand, on the fictitious manufacturer's name HPHIN Pharmaceuticals, which was not in existence. [...] "During intelligent sampling, the DCA teams collected samples of several drugs, which were sent to the Drug Control Laboratory, Vijayawada. Tests confirmed that eight varieties of drugs were spurious and do not have any medicinal substances," Mr. Ravi Shankar said. [...]

Southern Asia	India	State of Karnataka	14.66667	75.83333

Notes: In the last fortnight, not a day has gone by without the city police making an arrest for sale of Remdesivir in the black market. Since the State government has regulated the Remdesivir market, both the police as well as the Karnataka State Drugs Control Department are intrigued about the source of the medicine in the black market. There are also concerns about fake medicines being sold.

A senior drugs control officer explained that even the pharma company producing Remdesivir is not allowed free trade of the drug in Karnataka. [...]

Notes: Remdesivir injections were in great demand at the peak of the second wave of the coronavirus pandemic. But with very little supply against the huge demand, incidents of black-marketing and hoarding of Remdesivir injections have come to light across the state. Taking advantage of the severe shortage of the injections, some even went to the extent of selling fake injections. In just four months, the police have registered a total of 42 cases against 131 accused, according to sources at the state police headquarters in Gandhinagar. During the second wave in 2021, most hospitals in the state were in dire need of beds and Remdesivir injections. Due to non-availability of the injections, people were ready to spend a huge amount of money to save the lives of their relatives from Covid-19. [...]

Notes: Pfizer Inc. says it has identified in Mexico and Poland the first confirmed instances of counterfeit versions of the Covid-19 vaccine it developed with BioNTech SE, the latest attempt by criminals trying to exploit the world-wide vaccination campaign. Vials seized by authorities in separate investigations were tested by the company and confirmed to contain bogus vaccine. The vials recovered in Mexico also had fraudulent labeling, while a substance inside vials in Poland was likely an antiwrinkle treatment, Pfizer said. About 80 people at a clinic in Mexico received a fake vaccine going for about \$1,000 a dose, though they don't appear to have been physically harmed. The vials, found in beach-style beer coolers, had different lot numbers than those sent to the state, and a wrong expiration date, said Dr. Manuel de la O Cavazos, the health secretary of Nuevo León state. [...]

Notes: Police in Bengaluru arrested two women on May 20 including a 25-year-old contract doctor working with the Bruhat Bengaluru Mahanagara Palike (BBMP) for allegedly black marketing COVID-19 vaccines. According to media reports, the accused are Dr Pushpita who was attached with the Manjunathanagar Primary Health Centre (PHC) and her relative Prema, a resident of ITI Layout. Sanjeev Patil, Deputy Commissioner of Police (West), said that the vaccines, which were meant for the public and were to be administered for free, were kept at Prema's residence. Police said that they were being administered at Rs 500 per dose to private beneficiaries there daily post 4 pm from April 23, according to The Times of India.

The duo was caught red handed after police received a tip off and posed as a beneficiary. The same day, police had arrested four persons, including two doctors working with a Primary Health Centre (PHC), for allegedly running a racket of issuing fake COVID-19 certificates and black marketing antiviral drug Remdesivir. According to the police, two of the accused persons have been identified as Dr B Shekhar (25) and Prajwala, who worked as medical officer and doctor, respectively, at the PHC in Chamarajpet in the city. Notes: [...] According to their plea agreements, in April 2018, an international mail package from China was intercepted en route to 3300 Berkley Avenue, Bessemer, Alabama, the home of Coleman and Sims. The package contained two metal dies and a metal mold designed to be used to produce pressed pills. Authorities searched the Bessemer home, finding controlled substances, multiple firearms, and a pill press, powders and dyes used to make fake drugs. In October 2019, authorities again searched the home, finding an additional pill press, punch and die, and firearms. Coleman and Sims ran a counterfeit prescription pill operation out of their home in Bessemer in which Coleman used acetaminophen, fentanyl, heroin, and paverine to make pills similar in appearance to legitimate pharmaceuticals with markings such as "Lortab", "Adderall", "Soma", "Xanax", "Ecstasy", "Oxycodone", and "OxyContin." Coleman sold or traded these pills to obtain other drugs.

Snippet: WARNING LETTER Incredible Products, SA de CV MARCS-CMS 609503 — May 27, 2021 Share Tweet Linkedin Email Print Delivery Method: VIA UPS Product: Drugs Recipient: Recipient Name Diego Lomeli Pelayo Recipient Title Co-Owner Incredible Products, SA de CV Calle Castellanos y Tapia No. 921 Col. Santa Maria 44350 Guadalajara , Jal. Mexico Issuing Office: Center for Drug Evaluation and Research United States Warning Letter 320-21-47 May 27, 2021 Dear Mr. Pelayo: Your firm is registered as a human drug manufacturer. The U.S. Food and Drug Administration (FDA) conducted testing of a consumer antiseptic hand rub drug product (also referred to as consumer hand sanitizer) labeled as GELBACT ANTIBACTERIAL HAND GEL. This drug product is labeled as manufactured by your facility, Incredible Products S.A. de C.V., FEI 3009788529, Calle Castellanos y Tapia No. 921, Col. Santa Maria, Guadalajara, Jalisco 44350 Mexico. Following an attempt to import GEL-BACT ANTIBACTERIAL HAND GEL into the United States, it was detained and refused admission at the border. The results of the FDA laboratory testing of a batch of this product detained at the border demonstrate that this drug product, labeled as manufactured at your facility, is adulterated within the meaning of section 501(d)(2) of the Federal Food, Drug, and Cosmetic Act (FD& C Act or the Act), 21 U.S.C. 351(d)(2), in that a substance was substituted wholly or in part therefor. In addition, this product is adulterated within the meaning of section 501(a)(2)(B) of the FD& C Act (21 U.s.c. 351(a)(2)(B)), in that the substitution demonstrates that the quality assurance within your facility is not functioning in accordance with Current Good Manufacturing Practice (CGMP) requirements. In addition, GELBACT ANTIBACTERIAL HAND GEL is an unapproved new drug introduced or delivered for introduction into interstate commerce in violation of section 505(a) of the FD&C Act, 21 U.S.C. 355(a) and is misbranded under sections 502(j), (a), (e), (x) and (ee) of the FD& C Act, 21 U.S.C. 352(j), (a), (e), (x) and (ee). Introduction or delivery for introduction of such products into interstate commerce is prohibited under sections 301(d) and (a) of the FD&C Act, 21 U.S.C. 331(d) and (a). These violations are described in more detail below. Adulteration Violations GELBACT ANTIBACTERIAL HAND GEL, labeled as manufactured at your facility, is labeled to contain 80% volume/volume (v/v) of the active ingredient

alcohol (ethanol). However, FDA laboratory testing of a batch of this product detained at the border found that this product contained an average of 1.2% ethanol and 67% methanol v/ v. Therefore, this hand sanitizer drug product is adulterated under section 501(d)(2) of the FD& C Act in that the active ingredient, ethanol, was substituted wholly or in part with methanol, a dangerous chemical when in contact with human skin or ingested. Methanol is not an acceptable ingredient for hand sanitizers and should not be used due to its toxic effects. Skin exposure to methanol can cause dermatitis, as well as transdermal absorption with systemic toxicity. Substantial methanol exposure can result in nausea, vomiting, headache, blurred vision, permanent blindness, seizures, coma, permanent damage to the nervous system, or death. Although all persons using these products on their hands are at risk, young children who accidentally ingest these products, and adolescents and adults who drink these products as an alcohol (ethanol) substitute, are most at risk for methanol poisoning. On July 30, 2020, FDA held a teleconference with you and PCGI Wholesale, your registered U.S. agent. We recommended you consider removing all of your firm's hand sanitizer drug products currently in distribution to the U.S. market. On July 30, 2020, FDA notified the public of methanol contamination of your hand sanitizer at the following website: https://www.fda.gov/drugs/ drug-safety-and-availability/fda-updates-hand-sanitizers-consumers-should-not-use On August 6, 2020, you issued a voluntary nationwide recall of GELBACT ANTIBACTERIAL HAND GEL due to potential presence of undeclared methanol (wood alcohol) as noted on the following FDA website: https://www.fda.gov/safety/recalls-market-withdrawals-safety-alerts/incredibleproducts-sa-de-cv-issues-voluntary-nationwide-recall-gelbac-t-antibacterial-handgel In response to this letter, provide the following: • A detailed investigation into how the drug product described above, which was labeled as containing ethanol, was substituted in part or in whole with methanol. • A list of all raw materials used to manufacture all of your hand sanitizer drug products, including the suppliers' names, addresses, and contact information. • A list of all batches of any hand sanitizer drug products shipped to the United States by your firm, and a full reconciliation of all material you distributed. • Copies of the complete batch records for all batches distributed to the U.S. • During a teleconference with the FDA on July 30, 2020, you stated that you rely on the certificate of analysis (COA) of your incoming alcohol raw materials. Discuss the corrective action to remediate this issue in your response. The substitution and contamination with methanol in a drug product labeled as manufactured in your facility demonstrates that the quality assurance within your facility is not functioning in accordance with CGMP requirements under section 501(a)(2)(B) of the FD&C Act. 1 Unapproved New Drug and Misbranding Violation GELBACT ANTIBACTERIAL HAND GEL is a "drug" as defined by section 201(g)(1)(B) of the FD& C Act, 21 U.S.C. 321(g)(1)(B), because it is intended for use in the diagnosis, cure, mitigation, treatment, or prevention of disease, and/or under section 201(g)(1)(C) of the FD& C Act, 21 U.S.C. 321(g)(1)(C), because it is intended to affect the structure or any function of the body. Specifically, this product is intended as a consumer antiseptic hand rub. Examples of claims observed on the GELBACT ANTIBACTERIAL HAND GEL product label that provide evidence of the intended use (as defined in 21 CFR 201.128) of the product include, but may not be limited to, the following: "Drug Facts...Purpose: Antiseptic...USES...Hand sanitizer to help decrease bacteria on the skin." "Directions...Apply the gel on the hands, rub and distribute evenly. Let dry at room temperature." This topical antiseptic product is a "new drug" within the meaning of section 201(p) of the FD& C Act, 21 U.S.C. 321(p), because it is not generally recognized as safe and effective (GRASE) for use under the conditions prescribed, recommended, or suggested in its labeling. New drugs may not be introduced or delivered for introduction into interstate commerce without prior approval from FDA, as described in section 505(a) of the FD&C Act, 21 U.S.C. 355(a), unless they are lawfully marketed under section 505G of the FD&C

Act (which is not the case for this product, as further described below) or other exceptions not applicable here. No FDA-approved application pursuant to section 505 of the FD&C Act, 21 U.S.C. 355, is in effect for this drug product, nor are we aware of any adequate and well-controlled clinical studies in the published literature that support a determination that your GELBACT ANTIBACTERIAL HAND GEL drug product is GRASE for use under the conditions suggested, recommended, or prescribed in its labeling. Accordingly, this product is an unapproved new drug marketed in violation of sections 505(a) and 301(d) of the FD&C Act, 21 U.S.C 355(a) and 331(d). We note that over-the-counter (OTC) topical antiseptic products had been the subject of rulemaking under the Agency's OTC Drug Review. In particular, such products were addressed in a tentative final monograph (TFM) entitled "Topical Antimicrobial Drug Products for Over-the-Counter Human Use; Tentative Final Monograph for Health-Care Antiseptic Drug Products," Proposed Rule, 59 FR 31402 (June 17, 1994) (1994 TFM), as further amended by the "Safety and Effectiveness of Consumer Antiseptics; Topical Antimicrobial Drug Products for Over-the-Counter Human Use; Proposed Amendment of the Tentative Final Monograph; Reopening of Administrative Record," Proposed Rule, 81 FR 42912 (June 30, 2016) (Consumer Antiseptic Rubs Proposed Rule). Over the course of these rulemakings, three active ingredients (benzalkonium chloride, ethyl alcohol (ethanol), and isopropyl alcohol) were classified as Category III for use as consumer antiseptic rub products, meaning that additional safety and effectiveness data are needed to support a determination that a drug product containing one of these active ingredients would be GRASE for use as a consumer antiseptic rub. Section 505G of the FD& C Act addresses nonprescription drugs marketed without an approved application. Under section 505G(a)(3) of the FD& C Act, drugs that were classified as Category III for safety or effectiveness in a TFM that is the most recently applicable proposal or determination for such drug issued under 21 CFR Part 330 and that were not classified as Category II for safety or effectiveness – are not required to have an approved application under section 505 in order to be marketed, as long as they are in conformity with the relevant conditions of use outlined in the applicable TFM, including the active ingredient, and comply with all other applicable requirements. However, GELBACT ANTIBACTERIAL HAND GEL does not conform to the 1994 TFM, as further amended by the 2016 Consumer Antiseptic Rubs Proposed Rule, nor any other TFM, proposed rule, or final rule, and does not meet the conditions under section 505G(a)(3) of the FD& C Act, for marketing without an approved application under section 505. According to the product label, GELBACT ANTIBACTERIAL HAND GEL purportedly contains the active ingredient ethyl alcohol 80%. However, as previously discussed, FDA laboratory analyses of a batch of this product detained at the border demonstrated that GELBACT ANTIBACTERIAL HAND GEL contains ethanol in a concentration that is less than the 80% stated on its product label and less than the amount of ethanol described in the 1994 TFM. 2 Such a product does not conform with the TFM or the applicable requirements, nor is it consistent with the formulations described in the guidances setting forth FDA's temporary policies for hand sanitizers during the COVID-19 public health emergency. 3 FDA laboratory analyses also demonstrated that a batch of GEL-BACT ANTIBACTERIAL HAND GEL contains significant concentrations of the undeclared ingredient methyl alcohol (methanol). Use of methanol as an active ingredient is not in conformance with the 1994 TFM, nor is methanol included in the formulations described in FDA's Temporary Policy for Preparation of Certain Alcohol-Based Hand Sanitizer Products During the Public Health Emergency (COVID-19) Guidance for Industry. Furthermore, methanol is not acceptable as an inactive ingredient in hand sanitizers. As previously discussed, methanol has significant and sometimes fatal toxic effects and, therefore, does not meet the requirements under 21 CFR 330.1(e) that a product's inactive ingredients be safe and suitable. 4 Additionally, this methanol-containing drug product, GELBACT ANTIBACTERIAL HAND GEL,

is misbranded under sections 502(j), (a), (e), (x), and (ee) of the FD& C Act, 21 U.S.C. 352(j), (a), (e), (x), and (ee). It is misbranded under section 502(j) of the FD& C Act, 21 U.S.C. 352(j), because it is dangerous to health when used according to its labeling as a hand sanitizer. As previously stated, skin exposure to methanol could lead to systemic absorption, and substantial methanol exposure can potentially result in, among other things, blindness, permanent nervous system damage, and even death. This hand sanitizer is misbranded under section 502(a) of the FD& C Act, 21 U.S.C 352(a), because its labeling is false or misleading. As noted above, GELBACT ANTIBACTERIAL HAND GEL is labeled to contain ethyl alcohol 80%. However, FDA laboratory analysis of a batch of this product demonstrate that the product contains a concentration of ethyl alcohol (ethanol) that is less than what is stated on the product label and contains a significant concentration of methyl alcohol (methanol), an ingredient that is not declared on the product label. Section 201(n) of the FD& C Act, 21 U.S.C. 321(n), provides that "in determining whether the labeling or advertising is misleading there shall be taken into account . . . not only representations made or suggested . . . but also the extent to which the labeling or advertising fails to reveal facts material in the light of such representations or material with respect to consequences which may result . . ." Thus, the misleading representation of the concentration of the active ingredient ethyl alcohol (ethanol), and the failure of the product label to disclose the presence of the methyl alcohol (methanol) in the product, causes this product to be misbranded under section 502(a) of the FD&C Act, 21 U.S.C. 352(a). The failure of this product to list methyl alcohol (methanol) as an ingredient on its label causes also causes it to be misbranded under section 502(e)(1)(A) of the FD& C Act, 21 U.S.C. 352(e)(1)(A). Furthermore, GELBACT ANTIBACTERIAL HAND GEL is misbranded under section 502(x) of the FD& C Act, 21 U.S.C. 352(x), because the product labels fails to disclose a domestic address or domestic telephone number through which the responsible person may receive a report of a serious adverse event with such drug. Lastly, this product is misbranded under section 502(ee) of the FD& C Act, 21 U.S.C. 352(ee) because GELBACT ANTIBACTERIAL HAND GEL is a nonprescription drug subject to section 505G of the FD& C Act, 21 U.S.C. 355h, but does not comply with the requirements for marketing under that section and is not the subject of an application approved under section 505 of the FD& C Act, 21 U.S.C. 355. The introduction or delivery for introduction of a misbranded drug into interstate commerce is prohibited under section 301(a) of the FD&C Act, 21 U.S.C. 331(a). CGMP Consultant Recommended Based upon the nature of the violations we identified at your firm, we strongly recommend engaging a consultant qualified, as set forth in 21 CFR 211.34, to evaluate your operations and to assist your firm in meeting CGMP requirements if your firm intends to resume manufacturing drugs for the U.S. market. We also recommend that the qualified consultant perform a comprehensive audit of your entire operation for CGMP compliance and that the consultant evaluates the completion and efficacy of your corrective actions and preventive actions before you pursue resolution of your firm's compliance status with FDA. Your use of a consultant does not relieve your firm's obligation to comply with CGMP. Your firm's executive management remains responsible for resolving all deficiencies and systemic flaws to ensure ongoing CGMP compliance. Conclusion The violations cited in this letter are not intended to be an all-inclusive list of violations associated with your drug products. You are responsible for investigating and determining the causes of these violations and for preventing their recurrence or the occurrence of other violations. Note that FDA placed all drugs and drug products manufactured by your firm on Import Alert 66-78 on August 13, 2020, as the methods used in and controls used for the manufacture, processing, packing, or holding of these products do not appear to conform to current good manufacturing practices within the meaning of section 501(a)(2)(B) of the FD& C Act. Drugs and drug products that appear to be adulterated or misbranded may be detained or refused admission without physical

examination. All drugs and drug products manufactured by your firm may remain listed on this import alert until there is evidence establishing that the conditions that gave rise to the appearance of a violation have been resolved, and the Agency has confidence that future entries will be in compliance with the FD& C Act. This may include an inspection prior to the Agency considering the appearance of adulteration to be addressed. If you decide you want to manufacture drugs for the United States in the future, request a Regulatory Meeting to discuss corrective actions. This letter notifies you of our findings and provides you an opportunity to address the above deficiencies. After you receive this letter, respond to this office in writing within 15 working days. Specify what you have done to address any violations and to prevent their recurrence. In response to this letter, you may provide additional information for our consideration as we continue to assess your activities and practices. If you cannot do so within 15 working days, state your reasons for delay and your schedule for completion. Send your electronic reply to CDER-OC-OMQ-Communications@fda.hhs.gov. Please Identify your response with FEI 3011274338 and ATTN: Daniel W. Brisker. Sincerely, /S/ Francis Godwin Director Office of Manufacturing Quality Office of Compliance Center for Drug Evaluation and Research CC: Registered US Agent Gerardo Acevedo PCGI Wholesale pacific coastgbl@hotmail.com 1 Due to an increased demand for

alcohol-based hand sanitizers during the COVID-19 pandemic, FDA published the Guidance for Industry: Temporary Policy for Preparation of Certain Alcohol-Based Hand Sanitizer Products During the Public Health Emergency (COVID-19) on March 19, 2020, and subsequently updated the guidance several times, most recently on February 10, 2021. This guidance communicates the Agency's temporary policy that we do not intend to take action against firms for CGMP violations under section 501(a)(2)(B) of the FD& C Act if such firms prepare alcohol-based hand sanitizers for consumer use (or for use as a health care personnel hand rub) during the public health emergency, provided certain circumstances described in the guidance are present. These circumstances include preparation of hand sanitizer products using only the ingredients and formulas set forth in the guidance. In addition to the violative sample results detailed above that demonstrate the substitution of the hand sanitizer product manufactured at your facility, a review of the purported formulations on the drug product's labeling further indicates that such a product is not prepared consistent with FDA's temporary policy set forth in the guidance. Therefore, this product does not fall within the Agency's temporary policy not to take action against firms manufacturing hand sanitizer products for violations of section 501(a)(2)(B) of the FD& C Act. 2 The 1994 TFM, which does not distinguish between antiseptic hand washes and rubs, proposed for antiseptic handwashes and healthcare personnel handwashes an alcohol concentration of "60 to 95 percent by volume in an aqueous solution denatured according to Bureau of Alcohol, Tobacco and Firearms regulations in 27 CFR part 20." 59 FR at 31442. Later amendments to the 1994 TFM distinguished between antiseptic hand washes and rubs, and between consumer and healthcare personnel antiseptics, but did not change the alcohol concentration originally proposed in 1994. 3 See, e.g., Temporary Policy for Preparation of Certain Alcohol-Based Hand Sanitizer Products During the Public Health Emergency (COVID-19). Because GELBACT ANTIBACTERIAL HAND GEL is not consistent with the formulations in these guidances, it does not fall within any temporary Agency policy not to take action against firms manufacturing hand sanitizer products for violations of section 505 of the FD& C Act. 4 An inactive ingredient used in OTC monograph drugs must meet the requirements of 21 CFR 330.1(e), which requires, among other things, that inactive ingredients must be safe in the amount administered. Notes: [...] GELBACT ANTIBACTERIAL HAND GEL, labeled as manufactured at your facility, is labeled to contain 80% volume/volume (v/v) of the active ingredient alcohol (ethanol). However, FDA laboratory testing of a batch of this product detained at the border found that this product contained an average of 1.2% ethanol and 67% methanol v/v. Therefore, this hand sanitizer drug product is adulterated under section 501(d)(2) of the FD&C Act in that the active ingredient, ethanol, was substituted wholly or in part with methanol, a dangerous chemical when in contact with human skin or ingested. [...]

	ders and fire extinguishers instead of O2 cylinders	

Notes: The Delhi Police has arrested three persons for selling fire extinguishers as oxygen cylinders by remodelling the original discarded containers. The accused sold these fake oxygen cylinders to attendants of Covid-19 patients who are gasping for breath. [...] Police seized over 530 fire extinguisher iron gas cylinders and more than 25 oxygen gas cylinder nozzles during their raid. They also recovered electric grinders used for removing paint of the cylinders, spray-paint cans, and Rs 49,500 cash among other things.

The police said the fake oxygen cylinder racket was busted following a complaint by an NGO called, the Radha Vallab Sewa Sangh.

Mukesh Khanna, who runs the NGO that is serving free oxygen cylinders to Covid-19 patients, had approached the police with a complaint at the Farsh Bazar police station. He said that oxygen cylinder distributer named the Varsha Engineering located at April Colony, Alipur sold him oxygen cylinders of 4.5 litres at Rs 5,500.

But when he asked for more cylinders, the distributer increased the price and demanded Rs 13,000 for one 4.5-litre cylinder. The distributer justified increased price of oxygen cylinders saying he had to pay additional tax to the government. [...] The Delhi Police formed a team to conduct the raid. When the police team reached the location, they found the accused painting some gas cylinders to pass them off as oxygen cylinders.

"During enquiry, it was found that distributor Ravi Sharma was removing red paint of fire cylinders which were used for filling of CO2 and was converting them into oxygen cylinders by painting them black with the help of Abdul and Shah," Deputy Commissioner of Police (Shahdara) R Sathiyasundaram said. [...] The accused used to collect the empty or expired fire extinguishers and sell it either as scrap or refill the CO2 for firefighting, the police said. However, seeing oxygen supply crisis in Delhi, the accused planned to make profit by cheating people looking for oxygen cylinders. They remove the red colour of the original cylinder, painted it with black before fix nozzle to pass it off as an oxygen cylinder, the police said.

Notes: The Uttar Pradesh Special Task Force (STF) on Wednesday arrested two people for alleged black marketing of oxygen cylinders, officials said here. Ravi Yadav and Vinay Yadav were arrested from Sultanpur village in the Jankipuram area here with 40 oxygen cylinders and a vehicle used to transport them, a statement issued by the STF said.

The arrests were made on a tip-off that the duo was getting oxygen cylinders filled in Barabanki to sell them at high prices in Lucknow, it said.

Notes: [...] Despite India's status as the "pharmacy of the world," the biggest producer of generic drugs has been unable to meet the demand for antiviral medications such as remdesivir and favipiravir.

Given that demand has been outstripping supply in the country, police and other investigating agencies have had to crack down on black marketeers.

In the capital, New Delhi, which has been confronting a massive shortage of medical oxygen, police raided a building in a posh neighborhood and seized over 400 oxygen concentrators last week. [...]

Notes: Gurgaon Police, on Friday, arrested four people for selling oxygen cylinders in the black market even as several private hospitals in the district report a shortage of oxygen. According to officials, the four accused were selling cylinders worth Rs 12,000 to Rs 14,000 at a cost of Rs 90,000. They were arrested by a joint team of the Chief Minister's Flying Squad, Gurgaon's Police's Sector 40 Crime Branch, and the Drugs Controller on the basis of a tip off. [...]

Notes: Two men in west Delhi's Dwarka were arrested for passing off fire extinguishers as oxygen cylinders and selling them to people, whose relatives have contracted Covid-19, said Delhi Police on Thursday. In one of the cheating cases, the patient for whom the equipment was procured died of Covid-19, read the complaint lodged by the victim's acquaintance. Police could not immediately ascertain if the alleged cheating, or a possible delay in providing relief to the patient, had any direct bearing on the death. However, a relative of Narender, the 32-year-old patient who died, alleged that the delay in getting an oxygen cylinder led to his demise. "Had we not been cheated, my brother-in-law could have survived," said the relative. Police said suspects Ashutosh Chauhan and Ayush were rendered jobless during the pandemic and passed off fire extinguishers as oxygen cylinders to make a quick buck. "They sold one such

empty cylinder for 10,000," said Santosh Meena, deputy commissioner of police (Dwarka). [...] A red coloured cylinder was handed over to Arora in lieu of a payment of 10,000. The same night, Arora handed over the cylinder to the patient's family in Noida.

The cheating came to the fore when the patient's family went to get the cylinder filled on Tuesday morning and realized that it was a fire extinguisher. When Arora asked the suspects to return the money, they refused.

Notes: It is a matter of life and death, but China is choosing to make profits at the cost of people's lives. Not only have Chinese companies indulged in surge pricing with an increase in demand, they are now sending sub-standard Covid-19 related critical equipment to India. [...] "But, we are buying way more expensive products for half its quality and the life span will by only a few hundred hours as opposed to a few thousand hours that it originally is meant to be," said the buyer.

He explained, "As the demand was not forecast, the main components like medical compressors, molecular sieve, PCBA, outer shell, compressor cooling coils, etc, went out of stock. The assembling factories then started using non-medical grade components in the oxygen generators [...]

Notes: Amidst a shortage of covid supplies and oxygen, 2,73,000 fake remdesvir injections were ceased in Gujarat. The nation is grappling with a shortage of oxygen and injections, and this report has shocked the country. More details are yet to be uncovered by the state authorities, strict action will be taken against those involved in the racket. Last month, a similar misplacement of the vaccine stock was reported by the Maharashtra government. The CBI and state officials looked into the same to trace the package. Similar action will be taken here, with severe punishment for the people involved.
