

Medical Quality Product Report - COVID-19 issues

Issue 14. Data from October, November & December 2021

Part A: COVID-19 vaccines

Part B: Other COVID-19 related medical products:

- Diagnostics
- Personal Protective Equipment
- Sanitisers & disinfectants
- Medicines

The document has been produced by the Medicine Quality Research Group,
Centre of Tropical Medicine & Global Health, Nuffield Department of Medicine,
University of Oxford

This report was prepared by Inthaphavanh Kitignavong, Kerlijn Van Assche, Céline Caillet and Paul Newton of the Medicine Quality Research Group, that is part of the Infectious Diseases Data Observatory (IDDO) and the MORU Tropical Health Network, Centre for Tropical Medicine & Global Health, Nuffield Department of Medicine, University of Oxford, UK.

The [Medicine Quality Monitoring Globe system](#) was developed by Clark Freifeld (HealthMap, Boston Children's Hospital, North Eastern University) and Andrew Payne (IDDO), Alberto Olliaro (IDDO) and Gareth Blower (ex-IDDO). Curation of the reports was done by Kitignavong Inthaphavanh and Konnie Bellingham, linked to the Lao-Oxford-Mahosot Hospital-Wellcome Trust Research Unit (LOMWRU), Microbiology Laboratory, Mahosot Hospital, Vientiane, Lao PDR and by Thi Ngan Do, Jingying Xu and Ana Rosado Olmo (members of the Medicine Quality Research Group).

This document is open access but we would be grateful if you could cite it as:

Summary of findings

Since the beginning of the pandemic we have identified 959 relevant articles on quality problems with COVID-19 medical products in the English language lay press. In this issue we report on 58 further incidents reported during the months of October (21), November (17), and December (15) 2021. All concern incidents with products that were reported as substandard, falsified, diverted, unregistered or of unclear quality that were included in the Medicine Quality Monitoring (MQM) Globe.

Part A of the report covers incidents with COVID-19 vaccines. Between 12th March 2020 and 31st December 2021, we found, excluding duplicates, 178 reports of incidents on quality issues with COVID-19 vaccines linked to 45 different countries and/or online. In October, November and

December 2021, only 6 new incidents were reported. We report for the first time on incidents in Papua New Guinea where the provincial health authority halted COVID-19 vaccines for use due to vial heat exposure while transporting and contamination upon arrival. In November, WHO issued two alerts that refer to falsified COVID-19 vaccines identified in the Islamic Republic of Iran, wrongly labelled as made by Pfizer/BioNTech and Oxford-AstraZeneca.

Part B of the report covers incidents with other COVID-19 medical products including diagnostics, Personal Protective Equipment, sanitisers & disinfectants, and medicines. Previously we have seen that alerts appear in waves by product category. However, for the months of October, November and December 2021 none of the product categories stands out as of high frequency. Since June 2021 the overall number of incidents linked to poor quality COVID-19 medical products included in the MQM Globe decreased considerably. We could not identify articles on quality issues with ventilation & oxygenation equipment and consumables. However, quality issues with masks and sanitisers continue to be reported, as do ad hoc reports of falsified or unregistered ivermectin, even though its use in COVID-19 is not proven. Both in the USA and in India there were reported issues with substandard remdesivir.

We remain concerned about the global risk of substandard or falsified COVID-19 medical products. We need to be aware of potential new virus variants and a potential resurgence in COVID-19 cases. Criminals will be quick to step in when the need for certain COVID-19 medical products rises again. Therefore, we continue to share data from the MQM Globe, that serves as warning system for potential SF quality issues.

Introduction

During the COVID-19 pandemic, the demand for COVID-19 related medical supplies has inevitably ballooned with an increased need for personal protective equipment (PPE), diagnostics and preventive & curative pharmaceuticals. The high demand and related shortages of genuine products contributes to an increased global risk of diverted, substandard and falsified (SF) medical products, for COVID-19 and for many other essential medicines. The media have been reporting diverse examples of SF products flooding the market.

This report aims to collate information and reports in the public domain on the quality of medical products that are currently in use, or that are being trialled for COVID-19's prevention or treatment. We also include reports on key subjects such as access, affordability or off label use for COVID-19 if they mention concern of the quality of the products. We do not aim to include discussion of the multiple fraudulent claims and quackery.

The current report consists of two parts. Part A contains the information related to COVID-19 vaccines. Part B contains information related to the other COVID-19 medical product categories including diagnostics, personal protective equipment (PPE), sanitisers & disinfectants, medicines, and ventilation & oxygenation equipment and consumables. The report aims to aid national medicine regulators, international organizations, manufacturers and distributors, and civil society by summarising the current public domain literature, to inform action and policy.

The reports presented here were mostly extracted from the Medicines Quality Monitoring Globe ([the MQM Globe is accessible on the IDDO website](#)¹), a system that scrapes online newspapers (referenced in Google News) for early warnings of SF medical products. This report also includes scientific literature and policy documents related to COVID-19 medical product quality identified by manual searches in PubMed (Central) and Google Scholar. In addition, alerts and reports by national and international organisations are included when captured by the members of the team or shared by colleagues.

This fourteenth issue of the 'Medical Product Quality Report – COVID-19 Issues' covers information published during the months of October, November and December 2021. Previous issues covered publications from January 1st 2020 onwards and are available on the IDDO² and MORU³ websites.

Any remarks or additions to content are greatly appreciated (please write to medicinequality@iddo.org).

1. Key terminology

In this report we refer to the terminology for different types of poor quality medical products as defined by the World Health Organisation (WHO 2017, Seventieth World Health Assembly, Appendix 3)⁴. When coming across quality issues in the lay press we first try to categorise the products as ‘falsified’, ‘substandard’ and ‘unregistered/unlicensed’. However, when dealing with lay press articles, it is sometimes hard to judge and difficult to classify the quality issues for products discussed in the different articles, very often because not enough detail is known or described in the report. Therefore, when not clearly belonging to one of the above groups, we further use the concepts of ‘substandard or falsified’ (SorF), ‘diverted’, or ‘unclear’. Please see Table 1 for our working definitions.

We emphasise the difference between the use of the terms ‘falsified’ and ‘counterfeit’ medical products. ‘Falsified’ is a broad term including all the various types of deliberate misrepresentation of a medical product from a public health perspective. The term ‘counterfeit’ is specifically linked to intellectual property rights, ‘trademark counterfeit goods’⁵ and ‘pirated copyright goods’⁶ as used in the Trade-Related Aspects of Intellectual Property Rights (TRIPS) agreement.

When the concept of ‘black market’ is used in lay press articles, we notice that the use depends on the personal interpretation of the author: it might refer to products that are illegal in themselves, it might be people trying to avoid taxes, or avoiding government price controls. The products involved can be good quality, substandard, falsified, or of unknown quality. We nevertheless report on them. We argue that products sold on the black market are a problem for the following reasons. Firstly, they are taken from people that are supposed to receive the product. Secondly, products on the black market, such as vaccines and medicines, risk degradation due to improper handling and storage. Currently, articles do not provide evidence on degradation of products on the black market since it is not something that is investigated at the moment. In this report, we will classify black market sales as products for which the quality is ‘unclear’ when it is not specified in the article or report as falsified, substandard, or a genuine products.

In: Seventieth World Health Assembly; 2017. Document no longer available online. Definitions available on the WHO website: World Health Organisation. Substandard and falsified medical products. Published January 31, 2018. Accessed April 19, 2022. <https://www.who.int/news-room/fact-sheets/detail/substandard-and-falsified-medical-products>

⁵*Trademark counterfeit goods*: any goods, including packaging, bearing without authorization a trademark which is identical to the trademark validly registered in respect of such goods, or which cannot be distinguished in its essential aspects from such a trademark, and which thereby infringes the rights of the owner of the trademark in question under the law of the country of importation.

Source: World Trade Organization. Part III — Enforcement of Intellectual Property Rights. Accessed April 08, 2022. https://www.wto.org/english/docs_e/legal_e/27-trips_05_e.htm#fnt-14

⁶*Pirated copyright goods*: any goods that are copies made without the consent of the right holder or person duly authorized by the right holder in the country of production, and which are made directly or indirectly from an article where the making of that copy would have constituted an infringement of a copyright or a related right under the law of the country of importation.

Table 1. Key terminology for quality issues used in this Medical Product Quality Report

Falsified	<p>‘Falsified’ refers to products that ‘deliberately/fraudulently misrepresent their identity, composition or source’ (WHO, 2017). In this report, ‘fake’, ‘counterfeit’, ‘spurious’ and ‘falsely labelled’ medicines are regarded as synonyms or part of the group of falsified products.</p>
Substandard	<p>‘Substandard’ also called ‘out of specification’, are authorised medical products that ‘fail to meet either their quality standards or their specifications, or both’ (WHO, 2017). This may result from negligence or errors during the manufacturing process by authorised manufacturers, or degradation through deterioration because of inappropriate storage/transport in the supply chain. Information is usually insufficient to distinguish errors within factories from those in the supply chain, a key evidence gap as the solutions for the two differ.</p>
Unregistered or Unlicensed	<p>‘Unregistered/unlicensed’ medical products have not undergone evaluation and/or approval by the national or regional regulatory authority for the market in which they are marketed/distributed or used, subject to permitted conditions under national or regional regulation and legislation (WHO, 2017).</p>
When the above concepts are not applicable	
Substandard or Falsified	<p>‘Substandard or Falsified’ (SorF) was suggested by Saraswati et al. 2019⁷ because it is not possible to reliably classify a medicine as substandard or falsified without packaging analysis. It is used for products that failed at least one quality test without information on packaging authenticity, and falling outside the acceptance range of the specifications chosen as reference by the authors (either specific pharmacopoeia monograph or in-house specifications). In lay press articles the concepts of substandard and falsified products might be wrongly used, as a cautionary approach SorF is used when the information is not sufficient to make the distinction.</p>
Diverted	<p>‘Diverted’ medical products in this report are viewed as legitimate products that have been diverted outside the controlled supply chain. Theft is only one example of diversion. Due to loss of custody, diverted products are generally considered as poor quality medical products as, aside from harming the intended recipients, the products risk degradation due to inappropriate storage and transport.</p>
Unclear	<p>‘Unclear’ quality of medical products is a concept used in this report when there is insufficient information available to judge in which of the previously described category the product falls. These medical products can be good quality, substandard or falsified or of unknown quality. For example some reports discuss about suspicious online offers on the surface or dark web. Often the quality of the products is not known and from the article it is not clear if the product is for example diverted or counterfeit, though the origin and criminal intent of these products slightly differ.</p>

⁷ Saraswati K, Sichanh C, Newton PN, Caillet C. Quality of medical products for diabetes management: a systematic review. *BMJ Glob Heal.* 2019;4(5):1-14. doi:10.1136/BMJGH-2019-001636

2. Methodology for reporting on the lay literature

The reports presented in the sections on 'Articles of incidents in the lay literature' were extracted from the 'Medicine Quality Monitoring Globe'⁸ ([MQM Globe](#)). The MQM Globe contains publicly available information on the quality of medical products from non-peer-reviewed lay literature and serves as early warning system. Any article describing recalls, seizures, degradation, adulteration or contamination of COVID-19 medical products, cases of patients suffering adverse effects/lack of efficacy after using a COVID-19 medical product suspected to be substandard and falsified (SF) will be included. For the category of COVID-19 vaccines we also include scams and diversions (including theft).

2.1. MQM Globe database

The MQM Globe database uses a search system to capture data from online news sources. Articles matching the search terms are loaded into a database and curated by trained analysts. Because the Globe system mainly extracts newspaper articles from journals referenced in Google News, articles that are not referenced in Google News will not be captured. [Please consult the IDDO website for full methodology](#)⁹. On the 20th of March 2020, the search terms were adapted to capture more reports on SF medical supplies for COVID-19 from Google News. In addition, the Globe system captures some of the United States Food and Drug Administration (US FDA) medical product alerts. In the future, we will extend this feature for the US FDA and to other regulatory authorities.

2.2. Six MQM Globe-reports

Since the COVID-19 pandemic, the MQM Globe enables quick access to automatically created MQM-Globe reports, grouping articles by product categories that are linked to COVID-19. The six summary MQM Globe-reports are generated with pre-defined search terms and cover the following product categories: (a) COVID vaccines, (b) COVID diagnostics, (c) Personal Protective Equipment (PPE), (d) Sanitisers & disinfectants, (e) COVID medicines, and (f) Ventilation & oxygenation equipment and consumables. At the beginning of each MQM Globe-report the pre-defined search terms are displayed. Only the relevant articles included in the summary MQM Globe-reports are selected for the current COVID-19 report. When discussing an article the report ID (six or seven digit code) is mentioned. The original source article can be found using the report ID in the summary MQM Globe-reports in this report's annexes, or on the online MQM Globe.

2.3. Inclusion of a report ID

In this report we share details of articles captured by the MQM Globe that are linked to medical products potentially used in the context of COVID-19 or that are being trialled for COVID-19 treatment and/or prevention. In theory there is a distinction

⁸Infectious Diseases Data Observatory. Medicine Quality Monitoring Globe. Web Page. Published 2020. Accessed April 08, 2022. <https://www.iddo.org/medicine-quality-monitoring-globe>

⁹Infectious Diseases Data Observatory. Medicine Quality Monitoring Globe methodology. Web Page. Published 2020. Accessed April 08, 2022. <https://www.iddo.org/medicine-quality-monitoring-globe-methodology>

between (a) SF incidents that are due to or increased by the COVID-19 epidemic; and (b) incidents that would have happened in any case. It can be difficult to make the distinction between the two types of incidents and some articles cited in this report are not directly linked to the prevention or treatment of COVID-19. Nevertheless we have included them as they represent crossover risks and help to assess the evolution of the alerts on these medical products over time.

Although oxycodone is being trialled for COVID-19 treatment¹⁰, we do not include issues related to oxycodone as the system would become swamped by reports on its inappropriate use and cases of pills laced with fentanyl due to their wide occurrence on the black market.

With the information provided in the articles, it is not always possible to make the distinction between cases of financial scams, diverted, substandard or falsified products. We aim at including incidents in which it is likely that a physical product is involved. When the article clearly states that the offers are pure financial scams (without a physical purported product), we do not include the article: for example, criminals offering COVID-19 vaccines through a fake website¹¹ or COVID-19 vaccines sold over the phone¹² for which it is clearly established that it concerns a scam in which criminals are after personal details and money. In case of doubt and the possibility of a physical product behind the offer, we include the article: for example, vaccines are offered online or by phone but we cannot exclude that there is a physical product behind the offer because it is not mentioned in the article or no investigation has been done.

For this report, we only included report IDs that were published in English. For articles in French, Spanish, Mandarin, and Vietnamese; please consult the online MQM Globe. Only in Part A, dedicated to COVID-19 vaccines, do we include incidents reported in other languages if the incident was not reported in English.

2.4. Defining articles and incidents

In this report we define ‘articles’ as the number of unique report ID’s, corresponding to unique articles, that appear on our database. The same article (same report ID) can discuss incidents of different product categories. Therefore the same article might be discussed in different sections of the report.

An incident is a unique event with a specific location and timing with a specific product involved. Sometimes one article is describing several incidents. When summarizing the article, we will cite the different incidents in the text. However, for the overall number of incidents happened during a certain period, we are not

¹¹ For example: CBS Baltimore. 3 Maryland Men Charged With Creating Fraudulent Website To Sell COVID-19 Vaccines. CBS Baltimore. <https://baltimore.cbslocal.com/2021/02/11/3-maryland-men-face-federal-charges-for-fraud-scheme-to-sell-covid-19-vaccine/>. Published February 11, 2021. Accessed April 08, 2022.

¹² For example: Lenahan I. COVID-19 vaccine phone scam: Rye police alert residents of bogus calls. Seacoastonline. <https://eu.seacoastonline.com/story/news/local/2021/02/15/covid-19-vaccine-phone-scam-rye-police-alert-residents-bogus-calls/4488304001/>. Published February 15, 2021. Accessed April 08, 2022.

counting the number of separate incidents that are described in an article. For the purpose of this report we define 'incidents' as the number of unique report IDs per product category (i.e. vaccines, diagnostics, PPE, sanitisers & disinfectants, medicines, ventilation & oxygenation).

2.5. Reporting on incidents from the lay press.

The current report consists of two parts. Part A contains the information related to COVID-19 vaccines. Part B contains information related to the other COVID-19 medical product categories including diagnostics, personal protective equipment (PPE), sanitisers & disinfectants, medicines, and ventilation & oxygenation equipment and consumables. In Part B the lay press literature is discussed by product category. However, some articles summarize or describe multiple product categories used during the COVID-19 pandemic. When an article discusses more than 2 product categories, we describe the content of those articles in the section on 'Overview of all categories' and do not report on them in the sections for the different product categories.

Within the section of each product category we try to group the information in subheadings by product (e.g. by active pharmaceutical ingredient) that is involved and by quality issue (see Table 1 with key terminology for quality issues). Some articles discuss several products or several types of quality issues and are therefore not straight forward to classify; thus the subdivision might be arbitrary. We only discuss the articles once, even if they could be classified under different subheadings.

The MQM Globe displays one article per incident, the primary article. There are many other articles that describe the same incident, those are considered duplicate articles, and are not displayed on the MQM Globe unless they provide additional relevant information on the extend of the incident (e.g. additional quantities, additional batch numbers etc.). The information available in the lay press articles is often not very detailed which makes it sometimes difficult to separate out incidents on which we have (duplicate articles) or have not (primary articles) previously reported. To the best of our knowledge we try to only discuss primary articles, i.e. articles discussing new incidents on which we have not reported previously.

2.6. Changes in methodology since the first report

Please read more about the changes in methodology since the first report that was published in July 2020 in Annex A.

3. Disclaimer and caveats

We include abstracts and extracts from reports and articles that are subject to a takedown policy. If we are contacted by a potential rights-holder who objects to the presence of material, we will remove the material in question from the report and Globe until we have been able to assess the case. Where material is removed for valid reasons of copyright, its removal will be considered as lasting until copyright in the material expires, or until the rights-holder agrees that the material can be reinstated.

For the scientific publications we include preprints of articles. Please note that preprints should be viewed with additional caution as they have not been peer-reviewed. They should not be relied on to guide clinical practice or health-related behaviour and should not be reported in news media as established information.

For the lay press articles we report the information as it is stated in the articles and can thus be biased towards the authors perspective. It does not necessarily reflect our vision or judgment on the issue. Also, this information usually will not have scientific confirmation. Therefore, the information needs to be interpreted with the greatest caution. We regard the reports as early warnings of potential problems. No or few articles from a region does not imply that the medical product quality there is good, but probably reflects a lack of accessible information. Full disclaimer and caveats can be found at [MQM Globe disclaimer and caveats](#)¹³.

¹³ Infectious Diseases Data Observatory. Medicine Quality Monitoring Globe disclaimer and caveats. Web Page. Published 2020. Accessed April 08, 2022. <https://www.iddo.org/medicine-quality-monitoring-globe-disclaimer-and-caveats>

Part A.

COVID-19 vaccines

A.1. Introduction

It is hoped that the deployment of COVID-19 vaccines, combined with other public health interventions, will further reduce the incidence of COVID-19 infections and help end the pandemic. The storage and distribution of these vaccines is a major logistical challenge. Additional but continued neglected issues are substandard, falsified, and diverted COVID-19 vaccines, a high risk globally.

There have been numerous reports over the last two decades of vaccine falsification, for example, rabies, cholera, meningitis, yellow fever and hepatitis B vaccines and degradation due to storage and transport at inappropriate temperatures. These risk impairing the effectiveness of vaccination programs, increasing mortality, morbidity and economic harm, engendering further viral mutants, confuse and alarm communities, and damage public confidence in immunization programs, reducing vaccine uptake. Current risks for the implementation of COVID-19 vaccines include falsification and diversion fuelled by impaired access and the vital need for them globally, especially in the face of inequitable distribution. Vaccine degradation (included in the term substandard by WHO¹⁴) is also a major risk without robust regulated supply chains.

The data in this and previous reports suggest that we need a global joined up discussion with the many stakeholders as to how we can reduce the risk of these neglected problems negating, especially in vulnerable communities, the promise that vaccine development, manufacture and implementation has yielded for us all.

A.2. Articles of incidents in the lay literature

Here, we summarise articles in the public domain, on substandard, falsified or unregistered COVID-19 vaccines, since the start of the pandemic. We also include reports of diversion (including theft) of COVID-19 vaccines from legitimate supply chains. It is highly likely that diverted vaccines will not be stored appropriately and their use is likely to result in people being unprotected when they think they are. The incidents highlighted in this report are not exhaustive but it serves as early warning system of quality issues with COVID-19 vaccines.

A.2.1. Incidents since the beginning of the pandemic

Between 12th March 2020 and 31st December 2021, we found, excluding duplicates, 178 reports of incidents on quality issues with COVID-19 vaccines linked to 45

¹⁴ World Health Organisation. Appendix 3 WHO member state mechanism on substandard/spurious/falsely-labelled/falsified/counterfeit (SSFFC) medical products working definitions. In: Seventieth World Health Assembly. 2017. Accessed April 8, 2021. https://www.who.int/medicines/regulation/ssffc/A70_23-en1.pdf?ua=1

different countries and/or online (see Figure 2). Out of these reports, 22 were published in 2020; 156 reports were published in 2021 (see Figure 1).

Figure 1. Number of articles on the Medicine Quality Monitoring Globe reporting quality issues with COVID-19 vaccines.

Reports date from 12 March 2020 until 31 December 2021. We count here only one article per incident– there are many other articles describing the same incidents. From 2021 onwards, we report not only on incidents covered in the English lay press but also in Chinese, French, Spanish and Vietnamese languages.

Table 2 gives more details on the 101 reports that were published from January up to May 2021 and were discussed in previous Medical Product Quality Reports on COVID-19 vaccines issued by the Medicine Quality Research Group. Table 3 gives more details on the reports that were published from June to December 2021. For further details on the incidents reported during 2020 please consult Annex B.

In this issue we discuss in more detail the 6 incidents that were reported during the months of October (1), November (4) and December (1) 2021 (see Table 3). Two incidents involved falsified COVID-19 vaccines wrongly labelled as manufactured by Pfizer/BioNTech and Oxford-AstraZeneca. One incident involved substandard vaccines and one incident involved unregistered vaccines. We report for the first time an incident in Papua New Guinea.

Figure 2 Countries with public reports on COVID-19 vaccine quality issues on the Medicine Quality Monitoring Globe. Countries linked to incidents are indicated in orange. If a public report mentions a product name or a company, these details are indicated on the map, with in red the information that was added since the last issue. Ox-Az: Oxford-AstraZeneca, and J&J: Johnson & Johnson.

Table 2. COVID-19 vaccine quality issues reported in articles published from January to May 2021.

Each article is available in the Medicine Quality Monitoring (MQM) Globe linked to a report ID. Reports date from 1 January 2021 until 31 May 2021. In the next reports we plan to retrospectively categorise prior reports in the same way as in Table 3 with reports from June up to September 2021. We included articles from the Spanish, French, Chinese and/or Vietnamese press if the incident was not reported in the English lay press. We list here only one report per incident – there are many other reports describing these issues but we have not included them unless they provide additional relevant information. In the table we only refer to primary incidents described in the report, if a report repeats information on incidents that we already reported on, we do not name it again.

Table 3. Quality issues with COVID-19 vaccines in articles published between June and December 2021.

Each article is available in the Medicine Quality Monitoring (MQM) Globe linked to a report ID. Reports date from 1 June 2021 until 31 December 2021. Each type of quality issue has an attributed colour in this table. For the definition of the different terms of quality issues, please consult Table 1. In the next reports we plan to retrospectively categorise prior reports according to these definitions. We included articles from the Spanish, French, Chinese and/or Vietnamese press if the incident was not reported in the English lay press. We list here only one report per incident– there may be many other reports describing the same incidents. In the table we only refer to primary incidents described in the report, if a report repeats information on incidents that we already reported on, we do not name it again.

A.2.2. Incidents published in October, November and December 2021

A.2.2.1. *Falsified COVID-19 vaccines*

In November, WHO issued two alerts that refer to falsified vaccines identified in the Islamic Republic of Iran. The falsified products were reported to WHO in October 2021.

Pfizer/BioNTech

The first WHO Medical Product Alert was issued on falsified Pfizer/BioNTech vaccine (report ID 1277375). The genuine manufacturer of the Pfizer/BioNTech vaccine has confirmed that the product is falsified. The product label and artwork are inconsistent with genuine Pfizer/BioNTech vaccines. The expiry date on the label (09/2021) is falsified and inconsistent with the expiry date of genuine vaccine with the same lot number (lot EH9899).

Oxford-AstraZeneca

The second WHO Medical Product Alert was issued on falsified AstraZeneca vaccine (report ID 1276986). The genuine manufacturer of the AstraZeneca vaccine has indicated that the product is falsified. The falsified products are illicitly refilled vials of used and discarded genuine AstraZeneca vaccine. The metal cap on samples of these falsified products displays evidence of tampering, indicating the metal cap was removed in order to refill the vials, and later replaced onto the vial.

A.2.2.2. *Substandard COVID-19 vaccines*

Oxford-AstraZeneca

Due to heat exposure while transporting and contamination upon arrival, 150 vials of the AstraZeneca vaccine were halted for use in Papua New Guinea (report ID 1259608). This was the second batch ordered by the provincial health authority, which had undergone the same issues as a previous order and could not be used for vaccinations. The first batch, containing 200 vials, was spoiled on arrival and could not be used for vaccinations.

A.2.2.3. *Unregistered COVID-19 vaccines*

In Germany, police shut down an unauthorized vaccination drive at Lübeck airport after a doctor began administering COVID-19 vaccine shots he invented himself (report ID 1321353). According to police, 50 people appeared to have received the vaccines, while over 200 more were waiting in line. The vaccine was developed without any cooperation with regulators. The doctor tested the vaccine on himself and some 100 volunteers. He then claimed that his vaccine was 97 percent effective and could be reproduced in large quantities. He was served with criminal charges. According to another article, he administered more than 20,000 homemade doses to members of the public without authorization.

A.2.2.4. *Diverted COVID-19 vaccines*

Oxford-AstraZeneca and Johnson & Johnson

One article reports on an investigation that found sellers in Kenya, in Isiolo and Marsabit, who offered 10 vials of diverted Johnson & Johnson vaccine (report ID 1310033). Alleged corrupted Ministry of Health officials, established an intricate network of cartels that were selling donated COVID-19 vaccines. The article reports

that most of the vaccines circulating in the black market are smuggled to Nairobi from government facilities in the north-eastern region. The cartel allegedly involved doctors and medical workers, mainly targeting the Johnson & Johnson vaccine. One vial of Johnson & Johnson typically contains 5 doses and a vial of AstraZeneca contains 12 doses of COVID-19 vaccine. At the source, the vaccines were sold between Sh5,000 and Sh6,000 (Kenyan Shilling, approximately 44 – 53 USD) per vial but in the city prices could go up to Sh20,000 (approximately 176 USD).

Unknown 'COVID-19 vaccines'

In Uttar Pradesh state, India, approximately 3,000 vaccine doses meant for the Community Health Center (CHC) in Miyaganj were recovered under suspicious circumstances at the residence of a private employee (report ID 1284769). The vaccines were not kept in cold storage. The store helper was asked by the CHC superintendent to keep the boxes of vaccine doses at her place without knowing why.

A.3. Reports from scientific literature

Aborode AT, Awuah WA, Talukder S, et al. **Fake COVID-19 vaccinations in Africa.** *Postgrad Med J.* 2021;0(0). doi:10.1136/POSTGRADMEDJ-2021-141160

Extract. "Detection and removal of counterfeit products from circulation to mitigate harm to patients is imperative. A call for upsurge surveillance within the supply chains of countries and regions likely to be affected by these falsified products, which encompass hospitals, clinics, health centres, wholesalers, distributors, pharmacies and suppliers of medical products, is needed. All medical products must be obtained from authorised/licensed suppliers and the validity and physical state of all medical products must be meticulously scrutinised. All COVID-19 vaccine brands must be endorsed by regulatory bodies as safe and potent. Suggested efforts can ensure vaccine authenticity. It is recommended that better arrangements be made for the disposal of COVID-19 vaccine waste. Also, community leaders should be instated as reporters for vaccine efforts. Should they receive information that fake vaccines are being administered in remote and rural locations, these community leaders can report to health officials. The influence of community leaders can help raise public awareness. Community leaders are often respected by the local population and would have the trust of the community. Community leaders could help influence vaccinations while also keeping fake vaccinations out of their community."

Wu J, Li Q, Silver Tarimo C, et al. **COVID-19 Vaccine Hesitancy Among Chinese Population: A Large-Scale National Study.** *Front Immunol.* 2021;12.

doi:10.3389/FIMMU.2021.781161/FULL

Extract: "There is a considerable link between doctor and vaccine developer distrust and COVID-19 vaccine hesitation. In essence, willingness to take a vaccination is a matter of trust: that the vaccine is necessary, that it will function, and that it is safe. Due to recent vaccination-related adverse events and instances of counterfeit vaccine, the public's trust in medical professionals and vaccine developers has decreased significantly. To build faith in the vaccine, the vaccination service organization should, on the one hand, expand the number of vaccination medical personnel, train and develop doctor-patient communication skills, and improve the quality of vaccination service evaluation. China should also accelerate the development of a vaccine industry credibility system, encourage vaccine production, and encourage companies to take the lead in vaccine production and circulation while ensuring the quality and safety of vaccine products from development stage to circulation."

Srivastava K. **Fake covid vaccines boost the black market for counterfeit medicines.** *Br Med J.* 2021;375:1-2. doi:10.1136/bmj.n2754

Abstract: "Counterfeit medicines and vaccines have always threatened public health, but the pandemic has brought a global surge in black market sales."

A.4. Reports from international organisations

WHO. **Medical Product Alert N°6/2021: Falsified Pfizer-BioNTech COVID-19 Vaccine.** Medical product alert. Published November 4, 2021. Accessed December 16, 2021. <https://www.who.int/news/item/04-11-2021-medical-product-alert-n-6-2021-falsified-pfizer-biontech-covid-19-vaccine>

Extract. *"This WHO Medical Product Alert refers to one lot of falsified Pfizer-BioNTech COVID-19 Vaccine identified in the Islamic Republic of Iran and reported to WHO in October 2021. The genuine manufacturer of Pfizer-BioNTech COVID-19 Vaccine has confirmed that the product listed in this Alert is falsified. The falsified product was reported at the patient level outside authorized and regulated supply chains and authorized vaccination programmes in the Islamic Republic of Iran. [...]"*

WHO. **Medical Product Alert N°7/2021: Falsified COVID-19 Vaccine AstraZeneca.** Medical product alert. Published November 4, 2021. Accessed December 16, 2021. <https://www.who.int/news/item/04-11-2021-medical-product-alert-n-7-2021-falsified-covid-19-vaccine-astrazeneca>

Extract. *"This WHO Medical Product Alert refers to falsified COVID-19 VACCINE AstraZeneca (ChAdOx1-S [recombinant]) identified in the Islamic Republic of Iran and reported to WHO in October 2021. A.5. Miscellaneous

Zaman MH, Sundaram R, Gabriel W. **Counterfeit vaccines and medicines spell trouble for controlling Covid-19.** STAT. Published October 25, 2021. Accessed October 27, 2021. https://www.statnews.com/2021/10/25/counterfeit-vaccines-medicines-spell-trouble-controlling-covid-19/?utm_source=STAT+Newsletters&utm_campaign=145fc69ba6-Daily_Recap&utm_medium=email&utm_term=0_8cab1d7961-145fc69ba6-153157018

Extract. *"While the development of resistance to vaccines and therapeutics by SARS-CoV-2, the virus that causes Covid-19, is a real concern, substandard and falsified products affect public health efforts in ways that go beyond resistance. The presence of counterfeit vaccines could lead to an individual getting a fake vaccine for their second shot, giving the SARS-CoV-2 virus a chance to multiply and mutate in the host. Fake therapeutics could lead to repeat outbreaks in regions thought to have the disease under control. [...] There is a real danger that the presence of counterfeit vaccines and medicines will allow Covid-19 to become endemic, a near-permanent and potentially overwhelming disease, especially in low- and middle-income countries. What we need now is to steepen the gradient and ensure equitable access to quality therapeutics, because it is good public health policy and morally the right thing to do."*

Part B.

Other medical products linked to COVID-19

B.1. Articles of incidents in the lay literature

B.1.1. Overview of all categories

Since the beginning of the pandemic, we have identified 959 relevant articles on quality problems with COVID-19 medical products: (a) vaccines, (b) diagnostics, (c) Personal Protective Equipment (PPE), (d) sanitisers & disinfectants, (e) medicines, and (f) ventilation & oxygenation equipment and consumables. In this issue, we report on 53 new relevant articles in the English language: 21 articles for October, 17 for November and 15 articles for December 2021 (see Figure 3). From June 2021 onwards there has been a drop in the number of articles discussing quality problems of COVID-19 medical products. In June 2021 there were four times more articles discussing the issues of poor quality COVID-19 medical products compared to December 2021.

Figure 3. Number of articles on the Medicines Quality Monitoring Globe on quality issues of COVID-19 supplies by month.

As some articles describe more than one category of products, the sum of incidents per month as shown in Figure 4 may exceed the sum of articles per month of Figure 3. Note (i) since November 2020, non-COVID-19 medicines containing hidden (i.e. unstated) active pharmaceutical ingredients (API) that are used or trialled for COVID-19 are no longer included. Only medicines for which the stated API is used or trialled for COVID-19 treatment are included in this report. The observed decrease of the number of articles in November 2020 can be at least partially due to this change. Note (ii) search terms for COVID-19 vaccines theft and diversion have been added, the observed rise in the number of articles from January '21 can be at least partially due to this change.

The articles in English language that we discuss for October, November and December 2021 include 58 incidents: 6 on vaccines (see part A of this report), 18 on COVID-19 related medicines, 6 on PPE, 19 on sanitisers & disinfectants, and 9 on diagnostics. We could not identify articles in these three months in the MQM Globe on quality issues with ventilation & oxygenation equipment and consumables. Figure 4 shows the number of alerts for each category by month since the beginning of the pandemic. It shows that alerts have appeared in waves. In the beginning of 2021 there was an increase of articles discussing SF COVID-19 vaccines contemporary with the role out of the COVID-19 vaccines. In May and June 2021, with the rising number of COVID-19 cases in India, there was an increase in number of incidents reported in relation to poor quality remdesivir and tocilizumab in India. For the months of October, November and December 2021, we found a decline in the number of articles discussing poor quality incidents leading to a lower overall number of alerts for all product categories.

Some articles summarize or describe multiple product categories used during the COVID-19 pandemic. When an article discusses 2 or more product categories, we describe the content of those articles in this section and do not report on them in the sections for the different product categories.

In India, the Government has declared six brands of hand sanitisers and three brands of remdesivir to be “spurious” (report ID 1313442). All six brands of hand sanitisers were manufactured by a single company and allegedly analysis showed that all were falsified. According to the article the analytical reports reveal that for two of the three remdesivir brands, samples did not contain remdesivir. The Desram brand contained no detectable remdesivir and only dextrose. The Remdac brand, which stated on the label to contain 100mg/20ml injection, had only 0.56 mg/vial and 0.07 mg/vial of remdesivir.

In October 2021, US Customs and Border Protection (US CBP) found shipments from China and Mexico headed to Atlanta, St. Louis and Minnesota that contained the controversial drugs ivermectin and hydroxychloroquine (report ID 1270534). Between January 2020 and the end of July 2021, the US CBP seized nearly 40 million counterfeit face masks, 187,000 FDA-prohibited COVID-19 test kits, and approximately 40,000 tablets of unapproved chloroquine and hydroxychloroquine.

Figure 4. Incidents on the Medicines Quality Monitoring Globe on quality issues with COVID-19 medical products by month.
 The arrow indicates the end of September 2020 when the category of ‘Personal Protective Equipment Incl. sanitisers’ was split in two distinct categories: (A) Sanitiser & disinfectants, and (B) Personal Protective Equipment. As some articles describe more than one category of products, the sum of incidents per month may exceed the sum of articles per month reported in Figure 3.
 Note (i) since November 2020, non-COVID-19 medicines containing hidden (i.e. unstated) active pharmaceutical ingredients (API) that are used or trialled for COVID-19 are no longer included. Only medicines for which the stated API is used or trialled for COVID-19 treatment are included in this report. The observed decrease of the number of articles in November 2020 can be at least partially due to this change. Note (ii) search terms for COVID-19 vaccines theft and diversion have been added, the observed rise in the number of articles from January 2021 can be at least partially due to this change.

B.1.2. COVID-19 diagnostics

In October 2021, four articles reported on incidents with COVID-19 diagnostics and in November five articles, but we found none for the month of December 2021.

B.1.2.1. Falsified thermometers

In Singapore, a 33-year-old woman was arrested for allegedly selling falsified thermometers online (report ID 1302255). More than 300 trademark-infringing thermometers with a street value of more than S\$14,000 (Singapore Dollar, approximately 10,402.73 USD) were seized by police. The falsified thermometers only showed 37 degrees Celsius. When opened, they were completely hollow on the inside and contained only a chip for the LCD. The falsified thermometers were also sold online in Thailand, prompting Thai authorities to conduct a crackdown on smuggling groups importing the devices.

B.1.2.2. Substandard COVID-19 test kits

Three companies launched recalls of COVID-19 test kits due to false-positive results.

The first company Ellume, an Australian company, recalled about 427,000 COVID-19 at-home tests, out of which nearly 200,000 are unused (report ID 1242382). Due to a manufacturing issue, tests from those lots could produce false-positive results at a higher rate than researchers observed during clinical testing. It does not appear to affect negative results from the tests. Approximately 42,000 of the affected tests were used and produced positive results, both accurate and false. One month after the first recall, Ellume identified additional affected lots, bringing the total affected tests to more than 2 million (report ID 1284248). The article reports that there have been 35 reports of false-positive results sent to the FDA.

The second company, Abbott Molecular, recalled two of its Alinity COVID-19 lab test kits: the 'Alinity m SARS-CoV-2 AMP Kits' and 'Alinity m Resp-4-Plex AMP Kits' (report ID 1254012). During testing, according to Abbott, the mixing parameters could cause a sample in one well of the machine's tray to overflow into another sample well. Overflow into the wells of true negative samples located near positive samples in the tray could result in false-positive results.

Finally, Denka Co. based in Japan, is voluntarily recalling COVID-19 antigen rapid test kits distributed to medical institutions due to the possibility of false-positive results (report ID 1303146). The name of the kit is "QuickNavi - COVID19 Ag" and the suspect lot numbers start from 0750121 and end with 0850121.

B.1.2.3. Unregistered COVID-19 test kits

In Jamaica, 100,000 test kits that had not been approved by the WHO or the FDA had been imported into the country (report ID 1282784). The tests were manufactured in India and were reportedly being sold at a much lower price than other tests on the market. The WHO identified Jamaica and Bahamas as the two countries in the region that were using the test kit, with the possibility of the product being in other Caribbean countries.

In Cambodia, police raided a shop after receiving information that it was selling unlicensed COVID-19 testing kits and medicines (report ID 1288821). According to

the inspection report officers discovered unauthorized products, including 2 cases of COVID-19 rapid test kits.

B.1.2.4. *Diverted COVID-19 test kits*

In Illinois state, USA, there were reports of a burglary of COVID-19 test kits from North-western University (report ID 1292739). Police are investigating the theft of 4,500 COVID-19 test kits from a campus building.

B.1.3. Personal Protective Equipment

The MQM Globe reports on six articles that discuss quality issues with PPE: three in October, two in November and one in December 2021.

B.1.3.1. *Falsified*

Face Masks

In Michigan State, USA, 622,000 falsified N-95 face masks were seized from a warehouse on Detroit's west side (report ID 1261977). The masks were purchased by a hospital system in Michigan under the mistaken belief that they were real. Allegedly a Chinese company sold the masks all over the United States, including New York, Seattle, and Phoenix.

In Bangladesh, a Dhaka court ordered the Police Bureau of Investigation to further investigate the case against the owner of a company, Aparajita International, for allegedly supplying falsified N95 masks to Bangabandhu Sheikh Mujib Medical University (BSMMU) (report ID 1273166). In 2020, Aparajita International won a contract to supply 11,000 N95 masks to the BSMMU. There were no problems with the masks supplied in the first and second batches. According to the case documents, the third lot of 1,000 masks, received on July 2nd, and the fourth lot of 700 masks, received on July 13th, were found to be falsified.

In the United Arab Emirates (UAE), 'criminal gangs' have taken advantage of the COVID-19 pandemic by producing falsified masks and copies of popular sanitiser products (report ID 1310089). According to authorities, there were more than 20 raids on factories producing face masks in the country.

Gloves

According to CNN, tens of millions of falsified and used nitrile gloves from Thailand have reached the USA (report ID 1263794). In February and March 2021, one US company notified US CBP and the US FDA that it had received shipments from a Thai company containing substandard and visibly soiled gloves. Despite this, the Thai company managed to ship tens of millions more gloves in the following months, with some arriving in July. Authorities in both the USA and Thailand are conducting criminal investigations.

B.1.3.2. *Substandard masks*

According to Thailand Consumer Council (TCC), only one-fifth of 60 face mask brands available on the market passed Thai Industrial Standard quality tests (report ID 1304672). The TCC randomly selected for testing 60 face mask brands including 14 kinds of disposable face masks, 27 brands of surgical face masks and 19 different N95 face masks. Testing involved assessing their quality based on filter

efficiency of 0.1 microns and 0.3 microns, air permeability and pressure difference. According to the report, only three brands of disposable face masks met the standard. However, one of them over-claimed the filter quality for 0.1 microns as the result showed its filter was only 97.47% efficient, not 99% as claimed. Only three medical and surgical mask brands *met* the standard, whereas seven N95 brands did.

B.1.4. Sanitisers & disinfectants

The MQM Globe reported nineteen articles that discuss quality issues with sanitisers and disinfectants: eight in October, four in November and seven in December 2021.

B.1.4.1. Falsified hand sanitisers

In the USA, the Attorney General of Massachusetts filed a lawsuit against School Health Corporation for allegedly selling falsified hand sanitiser products worth more than 100,000 USD to several school districts and at least one city, claiming that it could kill the COVID-19 virus (report ID 1304086). According to the complaint the product labelled as ‘Theraworx Protect’, does not contain "*any of the key ingredients in hand sanitiser*" or have a drug facts label. The product also contained colloidal silver, which is not generally recognized as safe and effective for internal or external use, according to the Attorney General.

B.1.4.2. Substandard hand sanitisers

In Brunei, the Ministry of Health announced that 18 types of hand sanitisers alerted by the Health Sciences Authority of Singapore via the ASEAN (Association of Southeast Asian Nations) Post-Market System (PMAS) contained an undeclared chemical exceeding the safety limit (report ID 1238278). The products are not allowed to be imported and sold in Brunei.

‘Criminal gangs’ in the UAE have taken advantage of the COVID-19 outbreak by copying popular sanitisers like Dettol and producing falsified masks (report ID 1310089). Authorities raided more than 50 factories making ‘counterfeit’ Dettol.

In South Africa, a study by the University of Pretoria has found that the majority of the hand sanitisers in the Tshwana area do not contain the recommended 70% alcohol volume (report ID 1310141). Fifty products of different origins and formulations were analysed for their alcohol content using gas chromatography. Only 21 (42%) of the products tested contained at least 70% alcohol; only 14 (28%) of them met the WHO's recommended alcohol content of 80%. The study also found that of the 41 commercial off-the-shelf products analysed, 27 (66%) contained less than 70% alcohol, compared to 13% of homemade products. Only 18% of gel products contained 70% alcohol, compared to 47% of liquid-based products. Most of the products did not contain the appropriate or correct declaration as recommended by the South African National Standards (SANS 289 and 490).

The US FDA added ‘artnaturals’ to the list of contaminated hand sanitisers after detecting cancer-causing chemicals (report ID 1242074). The FDA said it tested certain artnaturals scent-free hand sanitiser labelled with “DIST. by artnaturals Gardena, CA 90248” and found unacceptable levels of benzene, acetaldehyde, and acetal contaminants.

The US FDA published warning letters sent in October, November, and December to three Chinese companies, one Dominican company, four different Mexican companies, two South Korean companies and one American company concerning the quality of their hand sanitisers. The goods coming from outside the USA were detained and refused admission at the border because they were adulterated and not approved by the US FDA. In general, the concentration of ethanol stated on the label was wrong and for some products the active ingredient was wholly or in part substituted with methanol.

- For three Chinese companies, the hand sanitisers were wrongly labelled. The product labelled as from 'GuangZhou YouXing Cosmetic Co. Ltd' contained on average only 35% instead of the stated 75% v/v ethanol (report ID 1250554). For 'Guangzhou Shiruoni Cosmetics Co., Ltd' the product purportedly contains 75% v/v isopropyl alcohol but analysis of the product showed an average of 67% v/v ethanol (report ID 1327364). Hand sanitisers of 'Guangdong Kemei Pharmaceutical Technology Co. Ltd.' were found to contain an average of 35% ethanol v/v and an average of 32% methanol v/v instead of the stated 75% v/v ethanol (report ID 1327363).
- In the Dominican Republic, 'Ardil Comercial S.R.L.' wrongly labelled their hand sanitiser to contain 70% v/v of isopropyl alcohol (IPA) (report ID 1241895). However, FDA laboratory testing of a batch of this product found that the product contained an average of 48% IPA v/v, and an average of 16% ethanol v/v.
- For four Mexican companies, the hand sanitiser was wrongly labelled to contain 70% v/v ethanol, but the ethanol was substituted wholly or in part with methanol. The ratios differ between products and were batch dependent, with the averages for the different companies:
 - 'Limpo Quimicos, SA de CV': 1% ethanol v/v and over 60% methanol v/v (report ID 1241893)
 - 'Healthy Foods & Nutrition Lab de Mexico S.A. de C.V': only 13% v/v ethanol (report ID 1241894)
 - 'Notarika S.A. de C.V': 0% ethanol and 54% of methanol v/v (report ID 1250552)
 - 'Maquiladora Miniara SA de CV': ranging from 1.0% to 49% ethanol v/v and 3.3% to 77% methanol v/v (report ID 1327362).
- For the two companies based in South Korea, US FDA laboratory testing showed a lower percentage of ethanol than stated on the label of the products. For the product labelled as 'AriBio H&B Co., Ltd' it contained an average of only 58% w/v ethanol instead of 70% v/v ethanol (report ID 1258777). For that labelled as 'DongBang Cosmetics Co., Ltd' the hand sanitiser contained an average of only 55% w/w ethanol instead of the stated 62% v/v ethanol (report ID 1274018).
- In the USA, two products labelled as from 'Global Sanitizers LLC' were wrongly labelled to contain 70% v/v ethanol (report ID 1289146). One contained on average 0% ethanol and 58% methanol v/v, and an average of 32% ethanol v/v and 7.4% methanol v/v.

The US FDA issued a warning letter to a US-based company for microbiological contamination in its sanitiser products (report ID 1337732). During the inspection, FDA investigators collected product samples, including FDA Sample number 1148361, which consisted of 3 sub-samples of one-gallon containers of Lite'n Foamy Lemon Blossom Hand Sanitizer (lot 538756, expiring January 2023). FDA's laboratory analysis identified *Burkholderia cepacia* (*B. cepacia*) complex in this lot. In addition, high levels of microbes were recovered from total aerobic microbial count (TAMC) and total yeast and mould count (TYMC) testing of all 3 subsamples.

Chameleon Beverage Co. Inc. dba Chameleon Sanitizer Corporation was issued a warning letter by the US FDA for insanitary conditions and misbranding violations (report ID 1297505). The company violated Current Good Manufacturing Practice (cGMP), according to the investigators, because their hand sanitiser products were prepared, packed, or held in insanitary conditions. Furthermore, 'Alkemi hand sanitizer gel' packaged in 33.8oz containers resembles drinking water bottles commonly purchased by US consumers, which is a misbranding violation under the FDA Act.

B.1.5. COVID-19 medicines

The MQM Globe reports on eighteen articles that discuss quality issues with COVID-19 medicines: seven in October, three in November and eight in December 2021.

B.1.5.1. Falsified COVID-19 medicines

Hydroxychloroquine. An article discusses fake online pharmacies that proliferated during COVID-19 (report ID 1243693). It reports on an incident of a pharmacist in Utah, USA, who was arrested after illegally buying hydroxychloroquine from a wholesaler in China that had mislabelled the controversial drug. Allegedly it is a tactic that is commonly used by wholesalers that sell to non-reputable online pharmacies.

Ivermectin. In Australia, the Therapeutic Goods Administration (TGA) tested several imported products labelled as ivermectin and found that they were falsified (report ID 1318759). The TGA stated that the testing was a warning against purchasing medicines online from untrustworthy sellers and strongly advised against self-medicating with unproven COVID-19 treatments such as ivermectin. The TGA is collaborating with the Australian Border Force to target counterfeit and illegal ivermectin entering the country.

Paracetamol. The Nigeria Customs Service seized imported medicines with falsified registration numbers, including paracetamol branded as Amipara plus (report ID 1327411).

Sildenafil. In the USA, a man was charged with operating vendor pages on darknet marketplaces, selling medicines and other contraband, including pills purporting to be Viagra (report ID 1269412).

Tocilizumab. In India, police arrested an interstate gang peddling falsified cancer medications (report ID 1251452). According to the inspector, Prime Pharma sold around 30 falsified Adcetris injections for Rs 1.1 lakh each (approximately 1,458

USD). Police also seized 24 vials of tocilizumab injections from Prime Pharma during the probe. Samples have been given to the Food and Drug Administration for investigation.

Various active pharmaceutical ingredients.

In Hong Kong, five people were arrested during a series of citywide raids in which they confiscated 1.6 million pills disguised as general goods that had been flown in from India (report ID 1265016). More than 70% of the prescription or controlled medicines, worth HK\$41 million (Hong Kong Dollar, approximately 5.26 million USD), were used to treat erectile dysfunction and contained sildenafil or tadalafil. Tablets used to treat depression and prostate-related illnesses were also seized. The majority of the medicines, according to authorities, were generic, but approximately 60,000 were counterfeit Viagra or Cialis.

In Nigeria, the National Agency for Food and Drug Administration and Control (NAFDAC) reported that its officials raided two warehouses in Lagos and carted away banned pharmaceutical medicines (report ID 1292649). According to the NAFDAC, the banned and falsified medicines in the warehouses included 534 cartons plus 300 packets of Biomal, Artesunate Injection; 188 cartons of Hydra and Black Cobra (sildenafil citrate 200mg); 198 cartons of Super Artesunate Injection and others. The medicines are worth over N3,000,000,000 (Nigerian Naira, approximately 7,220.22 USD). The investigation also revealed that the falsified medicines were imported from China.

B.1.5.2. *Substandard COVID-19 medicines*

Naproxen. US pharmaceutical companies are recalling multiple products in the US market (report ID 1247381). Glenmark Pharmaceuticals is recalling their products due to cGMP deviations. The recalls included 9,552 bottles of Naproxen Sodium Tablets 265 mg and 31,500 bottles of 550 mg.

Multivitamins. In Ireland, multivitamin products were recalled from the shelves of stores across the country due to the presence of the unauthorised pesticide ethylene oxide (report ID 1312988). The lot number for the 'Beeline Effervescent Multivitamin + Minerals' tablets is 012181QY, while the lot number for the 'Vitamin D3 + Multivitamin Teenager' tablets is 012101Q3. The products are sold in a variety of Irish pharmacies nationwide and in supermarkets.

Remdesivir. In USA, Gilead Sciences Inc. issued a recall of approximately 55,000 vials of remdesivir sold under the brand name Veklury and were distributed to hospitals nationwide in October and November 2021 (report ID 1308398). The vials were recalled due to glass particles contamination.

In May 2021, hospitals across India reported that their patients became ill after receiving remdesivir manufactured by Zydus Cadila (report ID 1329385). Many patients experienced shivering, fever, and shortness of breath. The affected batches included V100153, V100156, V100166, V100167, V100170, and L100148 (a powdered version of remdesivir). Only batch V100167 was tested and found to contain bacterial endotoxins.

Vitamin B. The Nigeria Customs Service has handed over seized expired medicines worth N62.3 million to NAFDAC (report ID 1269831). According to the authority,

there are various medicines including vitamin B such as 817 bottles of B-Vital, 607 bottles of B-care and others.

Various active pharmaceutical ingredients. An article described the results of the monthly random quality tests performed by the Indian Central Drugs Standard Control Organization (CDSCO). We only highlight the medicines that were declared as “Not of Standard Quality” that are used or trialled in the treatment for COVID-19. For November (report ID 1330633), the list contained 22 medicines that were not of standard quality, including telmisartan, clopidogrel, atorvastatin and vitamins. Reasons why the samples were defined as “Not of Standard Quality” were failure of tests on sterility, dissolution, assay and moisture content.

B.1.5.3. Unregistered COVID-19 medicines

Ivermectin. According to professors at Kanazawa University, seven medicines that are not approved in Japan, were being sold online as COVID-19 treatments from April 2020 to March 2021 (report ID 1281735). For example, ivermectin, an antiparasitic medication is being sold online with false claims that it is a “miracle cure.”

Various active pharmaceutical ingredients. A Cambodian shop was raided after police received information that it was selling unlicensed medicines and COVID-19 test kits (report ID 1288821). According to the inspection report, officers discovered unauthorized products, including 13 cases of Lianhua Qingwen Jiaonang (Chinese herbal medicine prescribed for treating COVID-19), and 2 cases of vitamin C.

B.1.5.4. Diverted COVID-19 medicines

Molnupiravir and favipiravir. In Vietnam, COVID-19 antiviral medicines are being sold illegally in Ho Chi Minh City due to a lack of access (report ID 1312355). Residents are looking for molnupiravir or favipiravir online. According to VnExpress's survey, the prices of existing COVID-19 antivirals could range from VND 4 million to 16 million (Vietnamese dong, approximately 176 to 705 USD). The Department of Health has issued a warning about illegal sales of COVID-19 antivirals, which could result in falsified medicines and worsening conditions. In one case, the department worked with the police to raid the Binh Tan District medical station's warehouse to locate 60 missing molnupiravir boxes. According to a pharmacist, 20 boxes had been distributed to quarantine zones, while the remaining 40 boxes are still missing.

B.2. Reports from scientific literature

B.2.1. General

Binder S, Ario AR, Hien H, et al. **African National Public Health Institutes Responses to COVID-19: Innovations, Systems Changes, and Challenges.** *Heal Secur.* 2021;19(5):498-507. doi:10.1089/HS.2021.0094

Extract: "In many countries, the private sector and local companies and entrepreneurs have been helpful, and development of local supply chains is being encouraged. In some cases, local production has been highly successful, for example, in the manufacture of test kits and protective coverings in Ethiopia. In others, however, local entrepreneurs and companies have produced or marketed substandard or counterfeit pharmaceuticals and other products. Some of these entrepreneurs and companies have links to decisionmakers in government, and NPHI leadership is challenged to ensure the quality of recommended or purchased goods and services."

Garcia-Santaolalla N, De Klerk K, Mendez M. **Ensuring Market Supply Transparency for Personal Protective Equipments Preparing for Future Pandemics.**; 2021. Accessed March 30, 2022.

https://www.graduateinstitute.ch/sites/internet/files/2021-10/PPE_Study_CUTS_Team_Phoenix_2021.pdf

Extract: "Severe shortages led to delays of 3-6 months for urgently required PPE, forcing doctors and hospitals to resort to sourcing PPE through personal networks. Many were forced to purchase PPE through unvetted sources without the ability to evaluate quality, leading to a surge in counterfeit products and substantial losses for desperate healthcare providers. The opacity of the PPE supply chain enabled the production and sale of counterfeit PPE to flourish, with over 12.7 million counterfeit N95 masks seized in the US in 2020 alone."

Naughton BD, Akgul E. **Medicine quality in high-income countries: The obstacles to comparative prevalence studies.** *J Med Access.* 2021;5. doi:10.11

Abstract: "The entry of falsified and substandard medicines into the legitimate pharmaceutical supply chain has negative impacts on healthcare systems, patient safety, and patient access to medicine. The COVID-19 pandemic has highlighted the importance of access to safe medicine through legitimate pharmaceutical supply chains and the willingness of criminals to target medical products such as PPE (personal protective equipment) and COVID-19 treatments. In this article, we analyse data from the United Kingdom (UK) national medicine alert and recall database to identify and understand recent cases of substandard and falsified medicine in the UK's healthcare systems. Using the UK as a case study, we describe that national drug alert and recall data are useful in their current form to record and understand cases of substandard and falsified medicines in the supply chain. However, if regulatory agencies published further data, these drug recall databases may be useful to support longitudinal and international comparative medicine quality studies. We suggest that regulatory agencies publish the number of affected medicine packs in each recalled batch, as part of the recall process. This will help policy makers, practitioners, and researchers to better understand, monitor and compare the quality of medicines within legitimate supply chains."

Nyamweya N. [Preprint] **The Quality of Alcohol-Based Hand Sanitizers and Public Health.** *Prepr Res.* Published online November 2021:1-9. doi:10.13140/RG.2.2.36307.71207/1

Abstract. "The COVID-19 pandemic prompted various public health advisories to reduce the transmission of SARS-CoV-2, including a major emphasis on hand hygiene. The latter led to the widespread use of alcohol-based hand sanitizers (ABHS) as a preventative measure. In order to ensure that the benefits derived from the use of these products are not compromised, some key product quality attributes, particular to ABHS, must be carefully controlled in their manufacture. The product attributes of most concern are: 1) ABHS must have correct amount of a permitted alcohol; 2) harmful impurities such as methanol, acetaldehyde and benzene should not be present or must be at levels below set regulatory limits; 3) allergenic ingredients

in ABHS. Recent experience from around the world during the COVID-19 pandemic reveals many instances in which these key quality parameters are not being met. ABHS not meeting quality standards have been the subject of numerous product recalls and in some cases, been associated with serious adverse health effects. Improvements in ABHS monitoring and regulation, especially with regards to constituent raw materials, are urgently needed to address the current situation."

Odiase PO. **Recalibrating African health laws to combat substandard and falsified medical products: Beyond COVID-19.** *Int J Civ Law Leg Res.*

2021;1(2):1-9. Accessed March 29, 2022. <https://www.civillawjournal.com/>

Abstract: "The multi-faceted problem of substandard and falsified medical-pharmaceutical products remains a loose cannon and a constant threat to the enjoyment of the right to life of the people of Africa. Studies show that one out of every ten medications in circulation within the continent is either substandard or falsified. Sadly, amid the scourge of COVID-19, an upward surge in the volume of substandard and falsified medical-pharmaceutical products in the region was reported. Investigations conducted within the period attributed the prevalence of substandard and falsified medical products in the continent to weak regulatory legal frameworks among other factors. This piece draws from the empirical studies and judging from the transnational nature of the problem of substandard and falsified medical products, canvases for the harmonization of legislative action by African states to aid in curbing the menace of substandard and falsified medical-pharmaceutical products."

Pawluczuk-Bućko P. **The Impact of the Pandemic on Economic Crime.**

Białostockie Stud Prawnicze. 2021;26(6):71-84. doi:10.15290/BSP.2021.26.06.05

Extract: "In view of the dynamic nature of the pandemic and its global extent, controlling trade in medicinal products, including vaccines, which have become the most sought-after product in the world, has become an absolute priority for the authorities responsible for investigating economic crime. The struggle against time to produce effective vaccines, combined with the public's expectations of rapid and effective success on the part of scientists, undoubtedly influenced the ingenuity of organised crime groups, who turned their interests precisely in this direction. From a criminological point of view, the attractiveness of the pharmaceutical market, in the context of COVID vaccines may change prevailing trends for a long time."

Sazonov V, Piip T, Ombler M, et al. **Security challenges during COVID-19:**

lessons learned and perspectives. *Proceedings.* 2021;20:1-289. Accessed March 30, 2022.

https://digiriul.sisekaitse.ee/bitstream/handle/123456789/2840/Proceedings_2021.pdf?sequence=5

Extract: "3. Risks in the pharmaceutical sector. The following is a discussion of the risks of fraud and corruption in the pharmaceutical sector worldwide. Having an overview of them strengthens the understanding of the importance of mitigation measures and the need for continuous development. Risks that have arisen in one country may also occur in another, and for this reason it is possible to look at risks in general without distinguishing between countries and to try to find common denominators that can be identified and addressed."

Steingrüber S, Gadanya M. **Weak Links: How Corruption Affects the Quality and Integrity of Medical Products and Impacts on the Covid-19 Response.**; 2021.

Accessed March 28, 2022. <https://www.u4.no/publications/weak-links-how-corruption-affects-the-quality-and-integrity-of-medical-products-and-impacts-on-the-covid-19-response.pdf>

Extract: "Corruption is involved in poor medical product quality in five important areas: manufacturing and distribution, regulation, procurement, high-level governance, and the health workforce. Existing corruption pressures impact the quality of medicines, and the Covid-19 pandemic has amplified the proliferation of falsified medical products. Innovative and existing anti-corruption approaches concentrate on prevention, detection, and response."

https://prism.ucalgary.ca/bitstream/handle/1880/114134/9781773852447_OA.pdf?sequence=1#page=117

Extract: "Securing the Supply Chain. Related to the change in the flows of illicit goods is a series of challenges to the supply chain. In the first instance, there was concern that items coming into Canada, particularly personal protective equipment (PPE), were counterfeit. Unfortunately, while CBSA officers are trained in recognizing contraband, in the spring of 2020, they were less prepared to recognize fraudulent medical and health-related supplies. As one interviewee asked, "How do you know if PPE and testing kits coming into the country are fraudulent? We didn't have this expertise at first." The second issue of concern is the integrity of supply chains, especially as they relate to vaccines. At the time of writing, there was concern that malicious actors may seek to steal vaccines or damage or destroy them. In addition, given the urgency under which authorities are trying to bring vaccines into the country, there is a risk that malicious actors may attempt to exploit this process and use it to bring in contraband."

B.2.2. Seizures/Surveys/Case reports/Reviews

Hirschwald LT, Herrmann S, Felder D, et al. **Discrepancy of particle passage in 101 mask batches during the first year of the Covid-19 pandemic in Germany**. *Sci Rep*. 2021;11(1):1-11. doi:10.1038/s41598-021-03862-z

Abstract: "During the first wave of Covid-19 infections in Germany in April 2020, clinics reported a shortage of filtering face masks with aerosol retention > 94% (FFP2 & 3, KN95, N95). Companies all over the world increased their production capacities, but quality control of once-certified materials and masks came up short. To help identify falsely labeled masks and ensure safe protection equipment, we tested 101 different batches of masks in 993 measurements with a self-made setup based on DIN standards. An aerosol generator provided a NaCl test aerosol which was applied to the mask. A laser aerosol spectrometer measured the aerosol concentration in a range from 90 to 500 nm to quantify the masks' retention. Of 101 tested mask batches, only 31 batches kept what their label promised. Especially in the initial phase of the pandemic in Germany, we observed fluctuating mask qualities. Many batches show very high variability in aerosol retention. In addition, by measuring with a laser aerosol spectrometer, we were able to show that not all masks filter small and large particles equally well. In this study we demonstrate how important internal and independent quality controls are, especially in times of need and shortage of personal protection equipment."

Ng JK, Tay FH, Wray PS, et al. **Inexpensive Portable Infrared Device to Detect and Quantify Alcohols in Hand Sanitizers for Public Health and Safety**. *Anal Chem*. 2021;93(45):15015-15023. doi:10.1021/ACS.ANALCHEM.1C02652

Abstract: "The onset of Covid-19 pandemic has resulted in the exponential growth of alcohol-based hand rub (ABHR)/hand sanitizer use. Reports have emerged of ABHR products containing methanol, a highly toxic compound to humans, exposing users to acute and chronic medical illnesses. While gas chromatography-mass spectrometry (GC-MS) remains the gold-standard method for the detection and identification of impurities in ABHRs, there exist limitations at widespread volume testing. This paper demonstrates the capability of an inexpensive portable pyroelectric linear array infrared spectrometer to rapidly test ABHR and compare the performance with a benchtop Fourier transform infrared spectrometer and HS-GC-MS. Multicomponent partial least square quantification models were built with performance found to be comparable between the two spectrometers and with the HS-GC-MS. Furthermore, the portable spectrometer was field-tested with real-world samples in Malaysia on both retail products (Group A) and freely deployed public dispensers (Group B) between May and November 2020. A total of 386 samples were tested. Only 75.2% of Group A met the criteria of safe and effective ABHR [no detectable methanol and alcohol concentration above 60% (v/v)], while <50% of Group B did. In addition, 7.4 and 18.8% of

Group A and Group B, respectively, were found to contain methanol above permissible limits. The high percentage of sub-standard and methanol-containing samples combined with the frequent use of ABHR by the public highlights the need for and importance of a portable and rapid testing device for widespread screening of ABHR against falsified products and protects the general public."

Yusuf AA, Yusuf A, Baker P. **Determination of alcohols in hand sanitisers: Are off-the-shelf hand sanitisers what they claim to be?** *S Afr J Sci.* 2021;117(11/12):92-98. doi:10.17159/SAJS.2021/9328

Extract: "Fifty products of different origins and formulations obtained off-the-shelf and in public places in and around Pretoria (South Africa) were analysed for their alcohol content using gas chromatography. Ethanol was the most common alcohol used in the products, followed by isopropanol. Only 21 (42%) of the products analysed contained at least 70% alcohol; of these only 14 (28%) met the WHO recommended $80\pm 5\%$ alcohol content to have a virucidal effect on SARS-CoV-2. Of the 41 commercial off-the-shelf products analysed, 27 (66%) contained less than 70% alcohol in comparison to 13% of homemade products. Only 18% of gel products contained 70% alcohol, compared with 47% for liquid-based products. Most of the products did not contain the appropriate or correct declaration as recommended by the South African National Standards (SANS 289 and 490). The proliferation of substandard ABHRs is of great public health concern and calls for stricter regulations and enforcement in order to protect consumers, their rights and well-being during and post the COVID-19 pandemic period. However, in the interim, formulation of ABHRs using the WHO guidelines should be mandatory, as such formulations, when made correctly, do have the required virucidal effect against SARS-CoV-2."

B.2.3. Additional publications from prior to October 2021

Tirivangani T, Alpo B, Kibuule D, Gaeseb J, Adenuga BA. **Impact of COVID-19 pandemic on pharmaceutical systems and supply chain-a phenomenological study.** *Explor Res Clin Soc Pharm.* 2021;2(2021):1-5. doi:10.1016/j.rcsop.2021.100037

Abstract: * *Background.* Resilient pharmaceutical systems and supply chains are critical in the control of COVID-19, a pandemic that has mostly devastated public health systems and livelihoods in resource-limited countries in sub-Saharan Africa.

* *Objective.* To evaluate the impact of COVID-19 on pharmaceutical systems and supply chain in a resource-limited setting.

* *Methods.* A descriptive qualitative survey using a phenomenological approach was conducted among key informants in the public and private pharmaceutical sectors of Namibia. Data were collected on the perceived impact of COVID-19 pandemic on the supply chain, as well as access and availability of essential medicines among the distributors and points of care in the private and public sectors. Qualitative themes of the impact were analyzed using Tesch's approach.

* *Results.* Of the 21 key-informants, 57.1% were female and 85% were from the private versus the public pharmaceutical sector. Overall, key informants reported a negative impact on access and availability of essential medicines, particularly sanitation and hygiene products, and antimicrobials. Most medicine outlets, experienced longer lead times, attributed to reduced inter-country transportation of goods and services and limited in-country capacity and capabilities to manufacture. The main thematic challenges included bureaucratic bottlenecks and lack of emergency readiness of the medicine's logistics supply chain in Namibia.

* *Conclusion.* COVID-19 pandemic aggravated the inequitable access to essential medicines in the public and private sectors of Namibia. Governments in resource-limited countries need to strengthen in-country Private-Public Partnerships as well as regional treaties for Universal Health Coverage in context of the COVID-19 pandemic.

Saha T, Khadka P, Das SC. **Alcohol-based hand sanitizer – composition, proper use and precautions.** *Germs.* 2021;11(3):417. doi:10.18683/GERMS.2021.1278

Extract: "Recommendations. Awareness regarding the composition, hazards and appropriate use of hand sanitizer products can prevent untoward accidents that can happen during preparation, handling, and use of ABHS. Simple yet important considerations for the safe production and use of ABHS are summarized as follows. Regulatory control on 'over the counter' sanitizer products such as ABHS should be a priority to ensure good manufacturing practices are followed and to ensure protection of consumer rights and safety of users. Awareness among users is necessary. Purchasing and use of substandard or counterfeit products should be discouraged, while knowledge sharing on appropriate hand hygiene techniques using ABHS should be promoted. Online news media, social media, television, and radio are excellent platforms for the rapid dissemination of information during a pandemic."

B.3. Reports from international organisations

Europol. **544 arrests and €63 million of fake pharmaceuticals and illegal doping substances seized | Europol.** NEWS. Published December 2021. Accessed January 13, 2022. <https://www.europol.europa.eu/media-press/newsroom/news/544-arrests-and-€63-million-of-fake-pharmaceuticals-and-illegal-doping-substances-seized>

Extract. "Traffickers target mainly non-professional athletes, selling illegal doping substances mostly either through social media accounts or in person. Many athletes from certain sports groups are often interested in doping substances, with products differing from one sport to another depending on the desired enhancement effect. The illegal market of performance-enhancing drugs has remained relatively unchanged, while the amount of COVID-19-related medicinal trafficking has significantly decreased. Law enforcement authorities have intercepted several fraud attempts targeting national bodies, offering medicines and medical devices such as facemasks and sanitisers. At the same time, the widespread availability of COVID-19 vaccines within the legal supply chain created a disadvantageous situation for criminals seeking to feed an illegal market."

Annexes

Annex A. Methodology changes for searches in the lay literature.

We report on incidents that were reported in the lay press. In the introduction (2. Methodology for reporting on the lay literature) we briefly describe the methodology we apply to collect the lay press articles. Changes in methodology since the first 'Medical Product Quality Report – Covid-19 issues' that was published in July 2020 are listed below.¹⁶

Since the October 2020 issue

- Personal protective equipment (PPE), and sanitisers & disinfectants: alerts from January to September 2020 in the PPE category included sanitisers and disinfectants. From October 2020 onwards, we created two distinct categories: sanitizers/disinfectants and other PPE.
- Search terms used to generate the summary MQM Globe-reports: key terms applied to search the Globe database to compile the Globe-reports were revised in October & November 2020. Therefore caution is required when interpreting the number of alerts or articles over time.

Since the November 2020 issue

- COVID-19 medicines: Non-COVID-19 medicines, containing hidden API(s) that are used or trialled for COVID-19 are no longer included in the COVID-19 reports (e.g. hidden sildenafil in sexual enhancement supplements). Only medicines for which the stated API is used or trialled for COVID-19 are included in the COVID-19 report (e.g. falsified 'Viagra'). The observed decrease of the number of articles/alerts over time may at least partially be due to this change.

Since the January 2021 issue

- COVID-19 vaccines:
 - Search terms used for Google News scraping: It is highly likely that diverted vaccines will not be stored appropriately and their use is likely to result in people being unprotected when they think they are. To ensure that the system includes articles that are related to diversion and theft of COVID-19 vaccines from legitimate supply chains, we adapted the search terms for Google News searches linked to COVID-19 vaccines.
 - Inclusion of reports: scams and fraudulent claims are included in the report if involving the direct offer of a COVID-19 vaccine. For all the other product categories,

¹⁶Infectious Diseases Data Observatory. Medical Product Quality Reports. Medical Product Quality Reports. Published 2020. Accessed January 24, 2022. <https://www.iddo.org/mq/research/medical-product-quality-reports>

our reporting policy remains the same, and we do not aim to include discussion of fraudulent claims of efficacy.

- Ventilation & Oxygenation equipment and consumables: We include incidents related to ventilation equipment in the overall article count. In the first Medical Product Quality Report, we reported on two incidents with ventilators (one in May and one in June 2020) but they were not included into the overall count in subsequent reports. From the January 2021 issue onwards the figures for ventilation equipment are included, including those incidents in May and June 2020).

Since the March 2021 issue

- PPE: 'face shield' was added to the search terms used to generate the summary MQM Globe-reports for PPE. Therefore caution is required when interpreting the number of alerts or articles over time.
- COVID-19 medicines:
'Amphotericin' was added to the search terms used to generate the summary MQM Globe-reports for COVID-19 medicine. Although the product is not used as direct treatment for COVID-19 it has been included in the search terms. Amphotericin is used to treat mucormycosis, a fungal infection increasingly reported in patient that previously suffered from COVID-19. Adding Amphotericin to the search terms does not generate bias in the previous reports since the Globe database did not hold any incidents with amphotericin from 1st of January 2020 to 31st of March 2021.

Since the April-May 2021 issue

- Ventilation & Oxygenation equipment and consumables: In the search terms used to generate the summary MQM Globe-reports "pulse oximeter" was replaced by "oximeter" to ensure all relevant articles are included.

Annex B. Table - Articles in lay literature on COVID-19 vaccine quality incidents published in 2020

Between 12th March 2020 and 31st December 2020 we found, excluding duplicates, 22 reports of quality incidents with COVID-19 vaccines. We only report on articles published in the English lay press and present in the online [Medicine Quality Monitoring Globe](#) (MQM Globe) and exclude articles that discuss the same incident (i.e. ‘duplicates’).

Table 4. Articles from 2020 on quality issues with COVID-19 vaccines available in the Medicine Quality Monitoring (MQM) Globe, in chronological order.

Reports date from 12 March 2020 until 31 December 2020. We list here only one report per incident– there are many other reports describing these issues but we have not included them unless they provide additional relevant information. We only included in this table articles from the English lay press.

Annex C. Report ID information and source articles

This annex contains the reports generated by the Medicine Quality Monitoring Globe (MQM Globe) using pre-defined search terms for each of the six product categories. At the beginning of each MQM Globe-report the pre-defined search terms used to generate the report are displayed.

Only the relevant articles in the MQM Globe-reports were selected for the current COVID-19 report. For each of the report IDs (six or seven digit code) discussed in the sections on 'Articles of incidents in the lay literature', additional information (including the source article) can be found in the MQM Globe reports in Annexes C.1 to C.6 or they are available on the online [MQM Globe](#)¹⁸, when introducing "reportID:XXXXXXX" in the search box.

			J07

Notes: This WHO Medical Product Alert refers to one lot of falsified Pfizer-BioNTech COVID-19 Vaccine identified in the Islamic Republic of Iran and reported to WHO in October 2021. The genuine manufacturer of Pfizer-BioNTech COVID-19 Vaccine has confirmed that the product listed in this Alert is falsified. The falsified product was reported at the patient level outside authorized and regulated supply chains and authorized vaccination programmes in the Islamic Republic of Iran. [...] The products identified in this Alert are confirmed as falsified on the basis that they deliberately / fraudulently misrepresent their identity, composition, or source: The product label and artwork are inconsistent with genuine Pfizer-BioNTech COVID-19 Vaccines The expiry date on the labels (09/2021) is falsified and inconsistent with the expiry date on genuine Pfizer-BioNTech COVID-19 Vaccine Lot EH9899 [...]

Notes: Corrupt Ministry of Health officials have established an intricate network of cartels that are selling donated Covid-19 vaccines for as much as Sh20,000 per vial, a Sunday Nation investigation has revealed. [...] The Sunday Nation investigation has also discovered that most of the vaccines circulating in the black market are smuggled to Nairobi from government facilities in the north-eastern region. The Ministry of Health has sent thousands of Johnson & Johnson vials to this region because, it reasoned, the lifestyles of the residents and the long distances to vaccination centres would have led to a high second-dose default rate. [...] The elaborate cartel involves unscrupulous doctors and medical workers who have access to the Ministry of Health Chanjo system, where they key in false data on vaccination figures while sourcing for

markets for the vials. At the source, the vaccines are sold for between Sh5,000 and Sh6,000 for vials of AstraZeneca or Johnson & Johnson, while vaccination certificates are sold for as little as Sh1,000. A vial of Johnson & Johnson has five doses and that of AstraZeneca has 12 doses, and these rake in upwards of Sh20,000 in the city.

The Sunday Nation investigation found many sellers offering legitimate documents already registered in the government system. It also encountered sellers in Isiolo and Marsabit who offered 10 vials of the vaccine. [...]

Le fabricant authentique du vaccin anti-COVID-19 AstraZeneca (ChAdOx1-S [recombinant]) a indiqué que le produit est falsifié. Le produit falsifié a été signalé au niveau des patients, en dehors des chaînes d'approvisionnement autorisées et réglementées et des programmes de vaccination approuvés en République islamique d'Iran. La présente alerte produit médical de l'OMS concerne un vaccin anti-COVID-19 AstraZeneca

(ChAdOx1-S [recombinant]) falsifié qui a été découvert en République islamique d’Iran et signalé à l’OMS en octobre 2021. Le fabricant authentique du vaccin anti-COVID-19 AstraZeneca (ChAdOx1-S [recombinant]) a indiqué que le produit est falsifié. Le produit falsifié a été signalé au niveau des patients, en dehors des chaînes d’approvisionnement autorisées et réglementées et des programmes de vaccination approuvés en République islamique d’Iran.

Ces produits falsifiés résultent du remplissage illicite de flacons usagés et jetés de vaccin authentique AstraZeneca contre la COVID-19 (ChAdOx1-S [recombinant]). Sur les échantillons détectés de ce produit falsifié, la capsule en métal présente des signes d’altération, montrant qu’elle a été enlevée pour remplir le flacon, puis remplacée sur le flacon.

Ces produits falsifiés sont difficiles à repérer, car ils peuvent paraître identiques au vaccin authentique AstraZeneca (ChAdOx1-S [recombinant]). Il existe donc un risque que ces produits soient intégrés de manière illicite ou accidentelle dans la chaîne d’approvisionnement réglementée ou le programme autorisé de vaccination. [...]

[Google translate: This WHO medical product alert concerns a falsified AstraZeneca (ChAdOx1-S [recombinant]) COVID-19 vaccine that was discovered in the Islamic Republic of Iran and reported to WHO in October 2021. 1338480	Investigation launched after German doctor administers 20,000 home-made Covid 'vaccines'	Link

Notes: German police had to close down an unauthorized event billing itself as a vaccination center on Saturday after a doctor began administering COVID-19 vaccine shots he had invented

himself, German media reported. The jab, which was developed without any official recognition, was being administered as a vaccination drive at Lübeck airport in the north of Germany. Police said that some 50 individuals appeared to have received the mystery shot, while over 200 more people were in line when the authorities showed up. They seized the liquids, syringes and lists recording who had already been vaccinated that day, as well as the personal data of those present. [...] Stöcker developed his vaccine without any cooperation with regulators. He tested the jab on himself and some 100 volunteers. He then claimed that his vaccine was 97% effective and could be reproduced in large quantities, but he was met with criminal charges. [...] Additional information: ID 1337288 (<https://www.forbes.com/sites/carlieporterfield/2021/11/30/german-doctor-who-boasted-of-giving-20000-homemade-covid-vaccines-under-investigation/?sh=138816064ac9>) Police in Germany have launched an investigation into a millionaire doctor who claims to have developed his own coronavirus vaccine and administered more than 20,000 homemade doses to members of the public without authorization. Notes: 150 vials of the AstraZeneca vaccine which have been ordered by the Madang Provincial Health Authority last week will not be used as they have been exposed to heat while in Port Moresby and were contaminated on arrival in Madang. [...] "We had the AstraZeneca vaccine but they expired, so we had to order new ones. The new orders are spoilt and cannot be used, so we will be placing another order this week for some more AstraZeneca vaccines," he said. The 150 vials of the AstraZeneca vaccine was the second batch ordered by the provincial health authority, which had undergone the same issues as a previous order, and could not be used for vaccinations. The first of this kind of issue occurred weeks ago when an order was placed for AstraZeneca vaccines, which had to go through Lae, as this was when the Madang airport was still closed. The first 200 vials were spoilt on arrival and could not be used for vaccinations.

1293868	Fake vaccination racket busted in UP district	Link
1310030	Unnao vaccine racket: 3,000 doses lying in open, false vaccination texts received	Link

Notes: Even as Covid-19 immunisation gains pace in Uttar Pradesh, people in the state's Unnao district have complained of fake vaccination and a huge cache of unregistered doses was found.

The case of fake vaccination was unearthed in Unnao's Miyaganj area, where more than 3,000 vaccine doses were found kept out of cold storage and beneficiaries were incorrectly receiving messages that they were vaccinated.

Around 3,000 vaccine doses meant for the Community Health Center in Miyaganj were recovered under suspicious circumstances at the residence of a private employee. The vaccines were not kept in cold storage. [...] Speaking to India Today, IO Sangeet Patel said that store helper Rani, who used to maintain the vaccine boxes, was asked by CHC superintendent Aftab Ahmed to keep the boxes of vaccine doses at her place. She said she had no idea about what use these shots were put to and was only following the superintendent's orders. [...] The fake vaccination racket came to light after the beneficiary received a message saying that they had received the second dose when they had not been administered it.

Umesh Chandra, 42, who had taken the first dose, told that the second shot was due to be administered on November 7. But even before he reached the center, he received a message on his phone stating that he had been administered the second dose. [...]

1283359	COVID-19 test kits not approved by WHO being assessed, Tufton says	Link
1283444	Covid-19 test kits not approved by WHO being assessed	Link

Notes: The government has tracked down several substandard rapid antigen test kits being used in the country, Minister of Health Dr Michael Darville confirmed yesterday. Speaking to reporters outside of Cabinet, Darville said an investigation has been launched after officials were alerted by the Pan American Health Organization (PAHO) that there was a potential presence of unregulated Standard Q COVID-19 Ag in the country.

The rapid tests, which were not approved by the World Health Organization (WHO) or the

United States Food and Drug Administration (FDA), were manufactured in India and were reportedly being sold at a much lower price than other tests on the market. [...] The story broke last week on the Jamaica Observer, which reported that 100,000 test kits not approved by the WHO or the FDA had been imported into the country, in breach of Jamaica's Disaster Risk Management Act (DRMA). [...]

Notes: COVID-19 test kit maker Ellume is recalling some at-home tests after learning that they were reporting a higher-than-expected rate of false positive results indicating someone has the virus when they do not. The Australian company has said the tests were shipped to U.S. retailers and other distributors from April through August. It published a list on its website of the lot numbers on test packages affected by the recall. The company said about 427,000 tests are in the lots identified in the recall, and nearly 200,000 are unused. Ellume said tests from those lots may provide false positive results at a rate higher than researchers saw during clinical testing. [...] Ellume said about 42,000 affected tests have been used and produced positive results, both accurate and false. That represents about 1% of the 3.5 million tests the company has shipped to the U.S. [...] Additional information: ID 1243552 (<https://abc7chicago.com/nearly-200000-covid-19-rapid-test-kits-recalled-over-concerns-of-f/11089680/>): About 195,000 of these kits are still unused and subject to the recall. About 202,000 have already been used, the company said. Of those, there have been around 42,000 positive results, of which as many as a quarter of those positives could have been inaccurate. However, the company said it's difficult to determine an exact ratio. [...]

1352574	COVID tests handed out in NC county had already been recalled over false positives	Link

Notes: Ellume is recalling its at-home COVID-19 test over the potential of false positive results, the U.S. Food and Drug Administration said. [...] Since that Oct. 5 alert, Ellume has identified additional affected lots, bringing the total affected tests to more than 2 million. [...] There have been 35 reports of false-positive results sent to the FDA, but no deaths have been reported. The reliability of negative test results is not affected.

The FDA is working with Ellume to assess the company's corrective actions.

Notes: A Singapore Police Force (SPF) press release on Sunday (Nov 28) confirmed that a 33-year-old woman was arrested for her suspected involvement in the online sales of the counterfeit goods.

The woman was arrested by the police for her suspected involvement in selling counterfeit thermometers online. On Friday (Nov 26), officers from the Criminal Investigation Department conducted raids at Bedok Reservoir View and Potong Pasir Avenue 1. They seized more than 300 pieces of trademark-infringing thermometers and probe covers, with an estimated street value of more than S\$14,000. [...]

Notes: Criminal gangs in the UAE have exploited the Covid-19 pandemic by making fake masks and copies of popular sanitiser products such as Dettol. [...] Hosted by the Legal Group, it showed how many gangs turned to making personal protective equipment, while the event also helped police and customs officers how to spot genuine products from fakes. "During the pandemic [there were] more than 20 raids on factories producing face masks in the UAE," said Hatem Abdel Ghani, partner at the Dubai law firm. [...]

Southern Asia	Bangladesh	Dhaka	23.7104	90.40744

Notes: A Dhaka court on Monday ordered the Police Bureau of Investigation (PBI) for further investigation into the case against Sharmin Jahan, the owner of Aparajita International, for supplying fake N95 masks to Bangabandhu Sheikh Mujib Medical University (BSMMU). [...] In May, the state-run facility decided to start treating Covid-19 patients and went for immediate procurement of safety gears for healthcare workers.

Aparajita International won a contract to supply 11,000 N95 masks.

On June 30, 2020, it supplied the first batch of 1,300 masks and the second lot of 460 was delivered the same day to the BSMMU. The third lot of 1,000 masks were supplied on July 2 and another 700 masks in the fourth lot on July 13.

The masks supplied in the first and second batches did not have any issues, but the third and fourth lots were found to be faulty, according to the case documents.

ethanol	Nerve depressants	all other therapeutic products	V03AZ01

Notes: American Screening LLC is recalling 153,336 units of hand sanitizer, containing 70% ethyl alcohol gel, packaged in containers that resemble water bottles and pose a risk of ingestion, according to a recall notice from the U.S. Food and Drug Administration (FDA). [...] The affected hand sanitizer lots include the expiration dates May 21, 2022, and May 24, 2022, for black-capped bottles, and no lot numbers or expiration dates for clear capped bottles. The product can be identified by its shape — a small water bottle — with a black flip top cap or clear cap with blue pouring spout with the weight of measure of eight ounces and UPC code

840050515792.

The sanitizers were sold to customers and distributors nationwide via americanscreeningcorp.com and/or in-house sales. [...]

Notes: [...] MEDICALLY MINDED Hand Sanitizer Gel Antimicrobial Formula, collected at your facility, is labeled to contain 70% volume/volume (v/v) of the active ingredient ethyl alcohol (ethanol). However, FDA laboratory testing of a batch of this product collected during the inspection found that the drug product contained on average 0% ethanol and an average of 58% methanol v/v. Additionally, the drug product MEDICALLY MINDED Hand Sanitizer Gel Antimicrobial with Vitamin E & Moisturizer, purported to be manufactured at your facility, is labeled to contain 70% v/v of the active ingredient ethyl alcohol (ethanol). However, FDA laboratory testing of this batch of this product obtained from the commercial market found that the drug product contained an average of 32% ethanol v/v and an average of 7.4%

methanol v/v. Therefore, these hand sanitizer drug products are adulterated under section 501(d)(2) of the FD&C Act in that the active ingredient, ethanol, was substituted wholly or in part with methanol, a dangerous chemical when in contact with human skin or ingested. [...]

ethanol	Nerve depressants	all other therapeutic products	V03AZ01

Notes: [...] IMPACTA HEALTH HAND SANITIZER declared to be manufactured at your facility, is labeled to contain 75% volume/volume (v/v) of the active ingredient isopropyl alcohol (IPA). However, FDA laboratory testing of a batch of this product detained at the border found that the drug product contained an average 67% v/v ethanol and 0% IPA. Therefore, this hand sanitizer drug product is adulterated under section 501(d)(2) of the FD&C Act in that the active ingredient, IPA, was substituted wholly or in part with ethanol. [...] Additionally,

according to the product label, IMPACTA HEALTH HAND SANITIZER purportedly contains the active ingredient Isopropyl Alcohol 75% v/v. However, FDA laboratory analyses of batches of this product demonstrated that IMPACTA HEALTH HAND SANITIZER does not contain a detectable concentration of isopropyl alcohol. Furthermore, analyses revealed that the product contained concentrations of the undeclared ingredient, ethanol at 66.9% v/v. While ethanol as a sole active ingredient is permitted for use as a consumer or health care personnel antiseptic hand rub, it is not declared on the product label. Thus, the misleading representation of the concentration of the active ingredient isopropyl alcohol and the failure of the product label to disclose the presence of the ethanol in the product cause IMPACTA HEALTH HAND SANITIZER to be misbranded under section 502(a) of the FD&C Act, 21 U.S.C. 352(a). [...]

Notes: Massachusetts Attorney General Maura Healey sued an Illinois-based company Monday for allegedly selling a fake hand sanitizer product to several school districts and at least one city, claiming that it could kill the COVID-19 virus. According to the complaint, filed Monday in Suffolk Superior Court, School Health Corporation violated the Massachusetts False Claims Act by asserting that its product could prevent the spread of the coronavirus, despite not containing "any of the key ingredients in hand sanitizer," Healey's office said in a statement on Tuesday.

[...] However, School Health's product, Theraworx Protect, does not contain those ingredients or have a drug facts label. Avadim Health Inc., the product's manufacturer, registered the product as "cosmetic" with the FDA, according to Healey's complaint.

According to Healey, the product also contained colloidal silver. The FDA ruled in 1999 that "products containing colloidal silver ingredients ... for internal or external use are not generally recognized as safe and effective." [...]

	Antiseptics	throat preparations	R02AA
ethanol	Other antiseptics and disinfectants	antiseptics and disinfectants	D08AX08
ethanol	Antidotes	all other therapeutic products	V03AB16
ethanol	Nerve depressants	all other therapeutic products	V03AZ01

Notes: [...] HF& NLab VERIO HEALTHCARE ALCOHOL ANTISEPTIC TOPICAL SOLUTION, labeled as manufactured at your facility, is labeled to contain 70% volume/volume (v/v) of the active ingredient alcohol (ethanol). However, FDA laboratory testing of a batch of this product detained at the border found that the drug product contained an average of only 13% v/v ethanol. This hand sanitizer drug product is adulterated under section 501(c) of the

FD&C Act in that the active ingredient of ethanol is present at levels in the product lower than that which is declared on its labeling. [...]

17 Tshwane residents using dodgy hand sanitisers – study

1312709	Hand sanitisers in and around Tshwane are substandard, study finds	Link
1316950	More than half of hand sanitisers lie about alcohol content — so make your own	Link

Notes: As Tshwane battles an outbreak of the Omicron variant, a University of Pretoria (UP) scientist has found that the majority of the city’s hand sanitisers do not contain the recommended 70% alcohol volume. [...] Yusuf said 50 products of different origins and formulations were obtained off the shelf and in public places in and around Tshwane were analysed for their alcohol content using gas chromatography. [...] The study found that of the 41 commercial off-the-shelf products analysed, 27 (66%) contained less than 70% alcohol in comparison to 13% of homemade products.

Only 18% of gel products contained 70% alcohol, compared with 47% for liquid-based products. Most of the products did not contain the appropriate or correct declaration as recommended by the South African National Standards (SANS 289 and 490). [...]

18 Brands of Remdesivir and hand sanitisers continue to be on top of spurious drugs

Table 38: Drugs for report 1313442

Medicine Name	Medicine Class	Action	ATC Code
remdesivir	Nucleosides and nucleotides excl. reverse transcriptase inhibitors	direct acting antivirals	J05AB16

Notes: Six brands of hand sanitisers and three brands of Remdesivir have been declared as 'spurious' by the Government analyst of Food and Drugs Administration (FDA) during the past 14 days from November 25 to December 7. From June 2021, brands of Remdesivir and hand sanitisers continue to lead in 'Not of Standard' drug reports issued by Government Analyst of FDA Maharashtra. 'The Hitavada' has been monitoring the public analytical reports constantly since June 2021. In present time of pandemic, the quality and standard of hand sanitisers and highly promoted and hyped drug Remdesivir is a cause of concern, considering the public analyst reports. [...] The analytical reports of sample sent on June 10 was published

by FDA on public domain on November 26, while that of samples sent on May 6, 2021 was published on November 25. The analytical reports have found that out of the samples of three brands, samples of two brands did not give identification test for the presence of Remdesivir. This means the main drug remdesivir drug has been missing in these samples. Desram - the brand declared as spurious contained no remdesivir but had only dextrose. While two brands Remdac seized from Buldana showing content of Remdesivir on label as 100mg/20ml injection (means 5 mg/ml), had only 0.56 mg/vial and 0.07 mg/vial Remdesivir content instead of 100mg mg/20ml. Surprisingly, one brand had amoxicillin 94.628 mg per vial and other had 79.33 mg per vial. All these four brands were supplied to hospitals and institutions as they were manufactured for hospitals and institutions only. [...]

Region Name	Country	Location	Latitude	Longitude
Americas	United States	Maumee	41.56283	-83.65382

Notes: [...] During the course of your inspection, FDA investigators collected drug product samples, including FDA Sample number 1148361, which consisted of 3 sub-samples of one-gallon containers of Lite'n Foamy Lemon Blossom Hand Sanitizer (lot 538756, expiring January 2023). FDA's laboratory analysis identified *B. cepacia* complex in this lot. In addition, high levels of microbes were recovered from total aerobic microbial count (TAMC) and total yeast and mold count (TYMC) testing of all 3 sub samples. These results significantly exceeded your finished product specification of (b)(4) colony forming units (CFU)/mL and (b)(4) CFU/mL, respectively. For example, TAMC counts were as follows: sub-sample 1 contained (b)(4) TAMC/mL, sub-sample 2 contained (b)(4) TAMC/mL, and sub-sample 3 contained (b)(4) TAMC/mL. TYMC counts were as follows: sub sample 1 contained (b)(4) TYMC/mL, sub sample 2 contained (b)(4) TYMC/mL, and sub sample 3 contained (b)(4) TYMC/mL. Your firm collected samples in tandem with our investigators and your contract laboratory obtained similar results. These sample results demonstrate that the drug products produced at your facility are manufactured under insanitary conditions, causing them to be adulterated under section 501(a)(2)(A) of the FDCA. [...]

20 UPDATE: Potential Risk of Infection When Using Heater-Cooler Devices – Letter to Health Care Providers - 2021-10-13

1298903	Court Enjoins Pomona, California Company from Manufacturing and Distributing Adulterated Sterile Animal Drugs That Fell Short of Minimum Regulatory Requirements	Link

Notes: A federal court enjoined a California company from distributing adulterated sterile animal drugs in violation of the Federal Food, Drug and Cosmetic Act (FDCA), the Department of Justice announced.

In a complaint filed on Oct. 27, 2020 in the Central District of California, the United States alleged that multiple inspections by the U.S. Food and Drug Administration (FDA) repeatedly showed that Med-Pharmex Inc. (MPX) manufactured and distributed animal drugs under conditions that fell short of the minimum regulatory requirements to ensure safety and quality, including a failure to maintain sterility. According to the complaint, the FDA issued a warning

letter to MPX in 2017 regarding numerous deficiencies found at the company. The complaint further alleged that the company failed to adequately investigate reports regarding the death or illness of animals receiving certain MPX drugs, and failed to properly clean and disinfect areas used to manufacture sterile drugs, as required by the FDCA. MPX and company president Gerald P. Macedo agreed to settle the suit and to be bound by a consent decree of permanent injunction that resolves the case. [...]

Notes: "We were seizing unapproved medications coming from China that were manufactured in clandestine labs," said Christopher Macko, a supervisory officer with U.S. Customs and Border Protection.

He says his officers have been intercepting everything from fake PPE and COVID-19 testing kits to drugs and phony vaccine cards. [...] Between January of last year and the end of July

this year, the agency seized nearly 40 million counterfeit face masks, 187,000 FDA-prohibited COVID-19 test kits, and approximately 40,000 tablets of unapproved chloroquine and hydroxychloroquine. [...]

Notes: A shop in Serei Saophoan was raided by police after a tip-off that it was selling unsanctioned Chinese traditional medicine and Covid-19 testing kits. [...] An official statement said that: in order to prevent the distribution of counterfeit products and improve the quality of local products to protect the health of the people, the Anti-Counterfeit officers investigated the Jing Long Store owned by Chan Kim Leng, a 36-year-old male. Officers discovered unauthorized Chinese traditional medicine and Covid-19 testing kits.

According to the inspection report: officers found 13 cases of Lianhua Qingwen Jiaonang, 2 cases of Vitamin C, and 2 cases of Covid-19 rapid test kits. All of the seized goods were unau-

thorized by relevant authorities. [...]

1279066	Scam online pharmacies selling fake, dangerous pills find opportunity in the pandemic	Link

Notes: The coronavirus pandemic has kick-started a host of online and remote services, but not all of them are as useful as expansions to telemedicine or having groceries ordered online and delivered to your doorstep: Fake online pharmacies have also proliferated during COVID-19,

putting their customers at serious risk. [...] Due to the pandemic, many people across the country and in Arizona were restricted in their movements, especially those with pre-existing health conditions that required specific medications. With that came a boom in fake online pharmacies taking advantage of the situation, Hertig said. [...] The issue of fake online pharmacies has become so rampant that the Drug Enforcement Administration issued its first public safety alert in six years, warning of an increase in fake prescription medicines being sold online that contain dangerous drugs like fentanyl and methamphetamine. [...]

1238392	Mumbai: Woman held for selling fake cancer drugs	Link

Notes: As many as 30 spurious cancer injections were sold over the past year by the woman arrested recently from Kalyan for running a fake drug ring. [...] Two Mumbai police teams are camping in New Delhi and Bihar to find out and nab those who had supplied the fake injections and tablets to the accused. Recently, an interstate gang peddling fake cancer drugs made in factories in Faridabad and Karnal in Haryana has been busted. The 30 original Adcetris injec-

tions, made by a Japanese firm, would cost about Rs 1.7 crore at the rate of Rs 5.8 lakh each. Pooja Rana, 30, who was arrested late last month for running Prime Pharma, was selling them for Rs 1.1 lakh each. [...] At the time of Rana's arrest, the police had seized seven Adcetris injections, originally valued at Rs 40.6 lakh, and two Iclusig tablets worth Rs 27 lakh. These would be sent to the Japanese company for examination. During the probe, cops also seized 24 vials of Tocilizumab injections from Prime Pharma. The drug was running in short supply at one point as it was found to be helping in managing Covid. The food and drug administration has been given samples for investigation. "We want to know if the Tocilizumab is genuine," said Patil. [...]

7 22 drug samples fail to qualify CDSCO test, Details - 2021-12-23

Snippet: New Delhi: In its latest drug safety alert, the apex drug regulatory body, Central Drugs Standard Control Organization (CDSCO) has flagged 22 medicine batches for failing to qualify for a random drug sample test for the month of November. These drug samples include Eurokem Laboratories' Glimepiride Tablets, Bharat Parenterals' Phytomenadione Injectoin IP 10mg/ml (Vitamin K1 Injection) 1 ml, Zee Laboratories' LECETZY (Levocetirizine Tablets I.P.), Danish Health Care's Dixogyl-400 (Metronidazole Tablets IP 400 mg), Health Biotech's Lignocaine and Adrenaline Injection IP (ACAINE ADR INJECTION) and others. This came after analysis and test were conducted by the CDSCO, Drugs Control Departments on 1102 samples. Out of this, 1080 samples were found of standard quality while 22 of them were declared as Not of Standard Quality (NSQ). A few of the reasons why the drug samples tested failed were the failure of Sterility test, failure of dissolution test, failure of the assay, failure of moisture content test. The samples collected were tested in five laboratories, namely CDL Kolkata, CDTL Mumbai, RDTL Chandigarh, CDTL Hyderabad. List of Drugs, Medical Devices and Cosmetics declared as Not of Standard Quality/Spurious/Adulterated/Misbranded, for the Month of November – 2021

favipiravir	Other antivirals	direct acting antivirals	J05AX27
	Antivirals	chemotherapeutics for topical use	D06BB
	Antivirals	antiinfectives	S01AD

Notes: The lack of access to antiviral drugs to treat Covid-19 in HCMC has pushed residents to look for such products online, even with the risk of buying fakes. [...] One salesperson said he'd just turned 18, another claimed to be a coronavirus patient who was selling leftover molnupiravir, and yet another claimed to be a doctor, Long said. [...] A man named Nhan contacted Thuan and offered her a molnupiravir course with 20 pills to be had over five days, at VND290,000 a pill. An alternative would be VND150,000 per pill of favipiravir. [...] Another man named Nghia offered her 40 pills of molnupiravir for VND8.5 million. He too claimed that they were imported. He said he would deliver the drugs straight to the door for cash. He claimed to have been selling the drug for over six months and that no one had complained about their quality. [...] A representative of the Drug Administration of Vietnam said the drugs might ei-

ther be fake or "leaked" from medical facilities. Tang Chi Thuong, director of the HCMC health department, said selling the drug was illegal as it has not been made commercially available. [...]

	Vitamin B12 (cyanocobalamin and analogues)	vitamin b12 and folic acid	B03BA

Notes: An Iowa man pleaded guilty today to a felony charge related to the sale of misbranded vitamin B12 injectable drugs, the Department of Justice announced. Brady Tomlinson, 46, of Des Moines, pleaded guilty in the U.S. District Court for the Southern District of Iowa to one count of introducing a misbranded drug into interstate commerce with the intent to defraud or mislead. According to court documents, Tomlinson sold injectable vitamin B12 solutions online beginning in May 2015. Tomlinson marketed the injections as weight loss drugs. According to court documents, the U.S. Food and Drug Administration (FDA) informed Tomlinson during a December 2016 inspection that dispensing the drugs without valid prescriptions violated the Federal Food, Drug, and Cosmetic Act (FDCA). Tomlinson closed his business for a week fol-

lowing the inspection, but then created a new website and continued selling the same kinds of misbranded B12 injections from December 2016 until he was arrested in April 2019. [...]

1301866	NAFDAC Uncovers N3bn Fake Drugs, Beverages in Lagos Warehouses	Link

Notes: The National Agency for Food and Drug Administration and Control (NAFDAC) on Friday said its officials raided two warehouses in Lagos and carted away banned pharmaceutical drugs worth N3 billion. [...] "The officers of Investigation and Enforcement Directorate of NAFDAC and the Federal Task Force on Counterfeit and Fake Drugs and Unwholesome Processed Foods raided two warehouses at the Trade Fair Complex in Lagos, where multiple cartons of banned drugs including 10 cartons of Tafradol (Tramadol 225mg) were found. "It is pertinent to mention that any strength above 100mg not registered is banned due to its deleterious effects on vital organs of the body such as the central nervous system and the brain. Furthermore, 1,200 cartons of banned Analgin Injection (2.5g/5ml); 2,200 cartons of banned Codeine in Syrup; suspected fake 500 cartons of Azmal; Artemeter Injection, 534 cartons plus 300 packets of Biomal; Artesunate Injection, 188 cartons of Hydra and Black Cobra (silderzafil citrate 200mg); 198 cartons of Super Artesunate Injection among others, were discovered and evacuated. [...]

remdesivir	Nucleosides and nucleotides excl. reverse transcriptase inhibitors	direct acting antivirals	J05AB16

Notes: Six brands of hand sanitisers and three brands of Remdesivir have been declared as ‘spurious’ by the Government analyst of Food and Drugs Administration (FDA) during the past 14 days from November 25 to December 7. From June 2021, brands of Remdesivir and hand sanitisers continue to lead in ‘Not of Standard’ drug reports issued by Government Analyst of FDA Maharashtra. ‘The Hitavada’ has been monitoring the public analytical reports constantly since June 2021. In present time of pandemic, the quality and standard of hand sanitisers and highly promoted and hyped drug Remdesivir is a cause of concern, considering the public analyst reports. [...] The analytical reports of sample sent on June 10 was published

by FDA on public domain on November 26, while that of samples sent on May 6, 2021 was published on November 25. The analytical reports have found that out of the samples of three brands, samples of two brands did not give identification test for the presence of Remdesivir. This means the main drug remdesivir drug has been missing in these samples. Desram - the brand declared as spurious contained no remdesivir but had only dextrose. While two brands Remdac seized from Buldana showing content of Remdesivir on label as 100mg/20ml injection (means 5 mg/ml), had only 0.56 mg/vial and 0.07 mg/vial Remdesivir content instead of 100mg mg/20ml. Surprisingly, one brand had amoxicillin 94.628 mg per vial and other had 79.33 mg per vial. All these four brands were supplied to hospitals and institutions as they were manufactured for hospitals and institutions only. [...]

Notes: Australia's drug regulator has issued a fresh warning to people not to import a drug championed by anti-vaxxers as an alternative treatment for Covid-19.

The Therapeutic Goods Administration tested a number of imported products labelled as Ivermectin and found they were counterfeit.

The TGA said the testing was a warning against buying drugs online from unverified sellers.

"Counterfeit products may contain undeclared and hazardous ingredients that could cause a serious adverse reaction," the regulator said on Tuesday.

"They may also be contaminated because of a lack of manufacturing and testing standards." [...]

Table 36: Drugs for report 1329385

Medicine Name	Medicine Class	Action	ATC Code
remdesivir	Nucleosides and nucleotides excl. reverse transcriptase inhibitors	direct acting antivirals	J05AB16

Notes: [...] Despite the obvious link between Cadila's batches and the life-threatening adverse events, few state drug regulators responded as they were supposed to. Mint's investigation found that regulators acted in a haphazard manner, declaring the batches to be of standard quality without testing them fully, and without seeking an explanation from the company. Only the Bihar regulator identified the cause of the mysterious illness. Their testing found Cadila's batch V100167 to contain bacterial endotoxins—compounds present in the protective envelopes of bacteria, which cause fever, chills and life-threatening septic shock in humans. Regulators in the remaining four of the five affected states never tested the medicines for endotoxins, although low endotoxin levels are a key quality requirement for drugs that are injected into humans. [...]

1254045	New toxic drug impurities detected in some heart pills in US: Bloomberg - 2021-10-15	Link

Notes: [...] The FDA inspector visited Hetero Labs Ltd.'s production plant in the Sangareddy district in south central India over 10 days in August. The plant makes the active ingredient for the blood pressure drug called valsartan, which it sells to other pharmaceutical companies to make a finished pill. Valsartan production can form azido impurities. The company did not

respond to requests for comment. Drug regulator Health Canada announced recalls of valsartan, a type of drug called an angiotensin II receptor blocker or ARB, in May for elevated levels of azido impurities. Over the next few months, other drugs in the same class, losartan and irbesartan, were recalled for the same impurities. Companies implicated include Sanofi, Novartis AG's generic-drug unit Sandoz and generic-drug giant Teva Pharmaceutical Industries Ltd. Teva also recalled ARBs in the U.K. in June followed by Sanofi in August, according to the country's Medicines and Healthcare products Regulatory Agency. The MHRA is aware of three potential azido impurities in heart drugs, according to emailed answers to a list of questions from Bloomberg. Other European countries have also recalled ARBs containing azido impurities, including France, Switzerland and Ireland. [...] Sandoz originally recalled 40 batches of ARBs in Canada in May and has since recalled 49 batches of certain losartan pills there. The active ingredient for the drugs was made by another company, according to an emailed statement from a spokesperson for parent company Novartis, though the company wasn't named. [...]

Americas	United States	New Jersey	40.16706	-74.49987

Notes: [...] In a complaint filed on Nov. 13, 2020, the United States alleged that Natural Solutions Foundation, along with trustees Ralph Fucetola and Dr. Rima Laibow, violated the Federal Food, Drug and Cosmetic Act (FDCA) by distributing a "nano silver" product that they claimed would prevent, treat or cure COVID-19. According to the complaint, which was filed at the request of the U.S. Food and Drug Administration (FDA), Natural Solutions operated various websites to market "Dr. Rima Recommends Nano Silver," a product that purportedly contained silver particles in a solution. The complaint further alleged that nano silver is not generally recognized by qualified experts as safe and effective to prevent, treat or cure COVID-19, and that the defendants' claims were not supported by credible scientific evidence or studies. Additionally, the complaint alleged that the defendants' nano silver products were misbranded drugs, because their labeling failed to bear adequate directions for use, as required by the FDCA.

"Marketing unproven products as treatments for COVID-19 endangers public health and violates the law," said Acting Assistant Attorney General Brian M. Boynton of the Justice Department's Civil Division. "The department will work closely with the FDA to stop anyone attempting to take advantage of the pandemic by selling unapproved, misbranded drugs." [...]

More than 70 per cent of the prescription or controlled drugs, valued at HK\$41 million, were for treating erectile dysfunction and contained either sildenafil or tadalafil. Tablets for countering depression and prostate-related illnesses were also seized. Senior Superintendent Rita Li Yim-ping, head of the Customs and Excise Department's syn-

dicade crimes investigation bureau, said on Monday that most of the drugs were generic, but about 60,000 were counterfeit Viagra or Cialis. "The haul has an estimated market value of HK \$55 million. It is the biggest-ever seizure of controlled pharmaceutical drugs in terms of value that Hong Kong customs has detected," she said. [...]

Notes: Anti-impotence drugs formed the bulk of a record HK\$55 million (US\$7 million) haul of controlled pharmaceutical products seized in a customs crackdown on a transnational syndicate, which allegedly mailed the tablets to customers around the world from its operations centre in Hong Kong. Customs officers arrested three women and two men during a series of citywide raids over the past month in which they confiscated 1.6 million pills disguised as general goods

that had been flown in from India. More than 70 per cent of the prescription or controlled drugs, valued at HK\$41 million, were for treating erectile dysfunction and contained either sildenafil or tadalafil. Tablets for countering depression and prostate-related illnesses were also seized. Senior Superintendent Rita Li Yim-ping, head of the Customs and Excise Department's syndicate crimes investigation bureau, said on Monday that most of the drugs were generic, but about 60,000 were counterfeit Viagra or Cialis. Southern Asia	India	Nagaon	26.35037	92.69225

Notes: Fake and spurious medicines have glutted markets in the remote and rural areas in the state. And the role of drug inspectors to check the menace is not up to mark. [...] The agents of fake medicines choose far-flung areas like sars where pharmacies without a licence also thrive. These pharmacies purchase spurious drugs and sell them at cheaper rates. Sources said that the police arrested an agent from Nagaon and recovered spurious tablets and capsules from him recently. The person had been selling medicines to various pharmacies in Nagaon for a long time. According to sources, fake medicine rackets have tie-ups with parties for manufacturing spurious medicines. They package the spurious drugs on their own. Pharmacies in rural areas buy spurious drugs for the high-profit margins, and patients buy them for the low price. Such medicines, locally called bhusi dorob (made from rice bran), even glut the weekly markets in rural areas in the state. [...]

1228089	Feds arrest former California state IT worker in alleged dark web counterfeit drug scam	Link

Notes: [...] Jonathan Patrick Turrentine, 39, of Sacramento County, is charged with 11 counts of distribution of controlled substances, including methamphetamine, amphetamine, MDMA (ecstasy), LSD and psilocybin (psychedelic mushrooms); one count of possession with intent to

distribute psilocybin; and one count of money laundering, Acting U.S. Attorney Phillip A. Talbert announced. [...] In December 2019, Sacramento agents learned that federal and local law enforcement agencies in Orange County were investigating the death of an 18-year-old whom they believe committed suicide after taking counterfeit Xanax purchased on the darknet. The victim's computer showed the victim bought products through darknet market accounts, including from "CaliPlugMike" on the Empire Marketplace. Agents determined that the delivery to the victim from CaliPlugMike had been mailed from Sacramento. Around this time, agents also became aware of another darknet vendor operating in San Diego, whom San Diego agents said was sourcing drugs from CaliPlugMike. [...] Posing as Empire Marketplace customers, federal agents placed orders from Turrentine for marijuana, MDMA, LSD and various pills purporting to be Adderall, Xanax, and Viagra. Agents also bought a list of 1.4 billion email addresses and passwords for \$1, which Turrentine's vendor page described as "compiled from over 100 breaches into a simple plain text file you can read." His page further explained that "most people have changed their email password but most people use the same password across multiple sites." Agents paid for all orders in bitcoin or another cryptocurrency. [...]

Medicine Name	Medicine Class	Action	ATC Code
oxycodone and paracetamol	Opioids in combination with non-opioid analgesics	opioids	N02AJ17

Notes: [...] The night before he died, D.S. urged his girlfriend to contact Ganpat to buy "Perc 30" pills, a counterfeit version of Percocet. The girlfriend, identified as R.V., contacted Ganpat via the encrypted messaging app Telegram and transferred \$60 via CashApp. A search warrant later revealed the CashApp account used to receive the funds was registered to Nick Ganpat at his address on the 7300 block of Penn Avenue South. [...] After interviewing R.V. about how they got the pills, police obtained a search warrant for Ganpat's home, where they found a safe containing more than \$700 in cash and a bag of Perc 30 pills. Ganpat told police that he sold marijuana, but denied selling the Perc 30s, saying, "I just buy large amounts for myself" and claiming he took up to 30 a day. [...]

Notes: A North Korean man has died after taking fake medication for his flu-like symptoms, one of many such casualties as the country struggles with a severe medicine shortage, sources told RFA. [...] Counterfeit medicines have flooded North Korea's markets, and as cold and flu season draws near, desperate people have no choice but to buy medicines they suspect are fake, on the off chance that they might be real. [...] Kilju county has been hit hard by the flu this year, and the pharmacies are stocking up on the counterfeit drugs, because that is all they can get, according to the source. [...] Among the drugs sold on the market are penicillin and myocilin said to be from various origins, as well as cold medicines resembling products sold in South Korea and Germany. The medicines can go for about 5,500 won (U.S. \$1.10) for 100ml on the high end, and 2,000 won on the low end, according to the source. [...]
